I have not let such things as this, writes Capt. Robert Dollar in the Nations Business, make me think that conditions and people are getting worse instead of better. In many directions there are vast improvements. One instance of this is the difference between the better class of lumber camps and living conditions as I knew them as a boy in the Canadian woods.

Then our stores consisted of fat salt pork in barrels, flour and

peas. A few years after I started beans were added to the list. Tea was supplied to anyone who wished to pay \$1 a month for it. Occasionally a few sacks of potatoes were sent in before the cold weather came. No other vegetables of any kind were used.

The result of this monotonous diet was that in the spring of the year we had men laid up with the disease called "black leg." This is similar to the disease the Japanese and Chinese are afflicted with on board ships. It is called "berberi" and is caused by the constant use of rice.

Another disease that attacked many of us before we could get a change of food was what we called "night blind." As soon as the sun set we would become totally blind until after sunrise. All those so afflicted would have to be back in camp before sunset or they would have to be led. Even a candle did not help out, as it gave no light to those afflicted. By eating small pieces of cheese or drinking milk a complete cure was effected within five or six days.

A big box was kept in each camp, called, for short a "van," properly "vanjouterie." In it were the tobacco and necessary clothing that might be required. Our complete line of medicine consisted of the following: Radway's Ready Relief, salts, castor oil and sticking plaster. These were supposed to cure all the ills that the lumbermen of those days were afflicted with—and I must say that the men were a strong, healthy lot.

What a pity that employers should neglect the welfare of their men! It was to their own hurt, for men afflicted could not do the work that healthy men could do. Men in our camps nowadays are never troubled with "black leg" or "night blindness." They are well fed, and with as good a variety, as the people in our city homes.

## May Expropriate Land for Nurseries

There was recently passed in the Ontario Legislature a bill to empower the Minister of Lands and Forests to expropriate lands for nursery or reforestation purposes. Hon. Beniah Bowman, Minister of Lands and Forests, stated that the capacity of the Norfolk Nurseries had been doubled four times during the last year and that it was the intention of the Government to go ahead on a large scale. Premier Drury added that the bill sought to bestow a very necessary power. The Government wanted nursery sites which were very hard to get, and once it became known that the provincial authorities desired certain properties, lands, which were next to worthless assumed a very considerable value. The new bill would overcome this difficulty by enabling the Government to expropriate land for nursery or reforestation purposes.

## New Members of the Association

The following firms have recently joined the Canadian Lumbermen's Association, Ottawa, Ont., the membership of which is growing steadily:—

H. V. Berry, Fort Plain, N. Y.  
 Blanchard Lumber Co., 126 State St., Boston, Mass.  
 Brighton Lumber Co., Island Pond, Vt.  
 John F. Burke, 33 West 42nd St., New York City.  
 George F. Gray, Grand Central Terminal, New York City.  
 Inspectors Lumber Co., West Chazy, N. Y.  
 Robinson-Edwards Lumber Co., Burlington, Vt.  
 Stevens Lumber Co., 10 P.O. Square, Boston, Mass.  
 Woodstock Lumber Co., 131 State St., Boston, Mass.  
 Thomas Bell, St. John, N. B.  
 Brown Corporation, Quebec, P. Q.  
 W. C. Cochrane, Sudbury, Ont.  
 Church & Church Ltd., B33 Board of Trade Bldg., Montreal.  
 English Lake Lumber Co., I'Israeli, P. Q.  
 Jost Co., Limited, 285 Beaver Hall Hill, Montreal, P. Q.  
 Muskoka Wood Mfg. Co., Limited, Huntsville, Ont.  
 R. O'Leary & Son, Richibucto, N. B.  
 Pierce Lumber Co., Limited, Timmins, Ont.  
 T. Prefontaine & Co., Montreal, P. Q.  
 St. Agathe Lumber & Construction Co. Ltd., Montreal, P. Q.

## Big Contract Awarded for Boilers

A contract has been awarded by the Toronto Transportation Commission for four 72 inches by 20 feet horizontal return tubular boilers, 125 lb. working pressure, built to Ontario codes, to the Engineering & Machine Works of Canada, Limited, of St. Catharines. A large breeching construction, 7 feet by 5 feet, and 60 feet long, connects the boilers to the stack. These boilers will be installed in the new \$1,000,000 repair shops being erected on Bathurst St., by the T.T.C. Keen competition, not only in regard to price but in regard to quality of workmanship, in which the commission is very particular, characterized the letting of this contract.

An official photograph taken by the Air Board at Lac la Loutre, 45 miles north of Roberval, Chicoutimi County, Que.

### Effective Aerial Work in Lake St. John Area

A. Landry, chief operator in charge of the Quebec Lands and Forestry Department hydroplane station at Roberval, located on the higher levels of the Lake St. John district 167 miles north of the city of Quebec is at present working on his report in connection with air observation, survey and photography, carried on last summer in the Lake St. John district and the north coast on the Nuskasquan River, 600 miles north of the base of Hydroplane station. This station was established in the summer of 1919 and good work done during this period to ascertain the status of the crown timber lands by air survey and observation, as well as photography of the areas to guide the forestry engineers in the work of land surveying.

The biggest results achieved by Mr. Landry and his pilot and observation assistants were in the summer of 1922 when 2,400 vertical and oblique photographs were secured in the Lake St. John district over an area of 3,500 square miles explored, and on the north coast 3,750 miles explored. Some of the oblique photographs secured from the planes, 2,000 feet in the air, are submitted for visualization to the readers of the "Canada Lumberman." They show the hydroplane station, the monastery conducted by the Trappist Monks, twenty-seven miles north of Roberval, and a few photos of timber lands with the numerous lakes, as well as the areas passed over by forest fires in their origin, due to careless hunters after fur-bearing animals.

The Provincial Government hydroplane station at Roberval is operated by a staff of sixteen employees under the direction of A. Landry, including four hydroplanes, the pilots, three observers, one photographer, mechanics and riggers. The station is distinctly shown on the photograph with two of the hydroplanes plainly seen anchored in the water close by the station.

Mr. Landry, is at the present engaged on his report for presentation to the Minister of the Department of Lands and Forests. He says that fires have done a great deal of damage to virgin forests due to careless hunters but says the insect plague is infinitely worse in its work of destruction. The photographs he has taken show to the practical experienced eye of the lumbermen the conditions of the Crown land areas and the burnt as well as the poor timber sections and the young forest lands. Mr. Landry declares that his work is by no means finished; in fact it has only begun. No exploration as yet has been made in the Uganda or northeast of the Saguenay which, however, in time will be fully explored, and observations and photographs taken, vertical and oblique.

### The Lumber Cut in New Brunswick

According to the latest word from the Crown Lands office in Fredericton, the lumber cut on crown lands throughout the Province of New Brunswick this winter will aggregate approximately 210,000,000 feet. The figures are being compiled by A. T. Murchie, chief scaler, and he estimates the total cut will be twice as large as that of last winter.

While it is a fact that twice as much lumber will be cut this winter on crown lands throughout the province as that of last season, the entire cut will not be much more than half that cut during 1921 and 1922. The average normal cut for this province is seven hundred millions. This year practically all of the big cuts have been made in the northern sections of Northumberland, Gloucester and Restigouche and along the St. John river, where the vast majority of the crown lands are situated. From Northumberland county all the way south the cut has been very small in comparison, due to the exceptionally heavy snow fall and the soft bottom. One operator in the southern section estimates that the total cut on private lands

will not exceed 100,000,000 feet. This shows that the entire log harvest will be away below the normal cut.

Some operators on private lands in the southern section have signified their intention of carrying on operations as soon as some of the snow melts, providing that the bottom will permit. Doubt as to the advisability of this is expressed and as a result very little may be accomplished.

Alexander Watson, well-known, retired lumber merchant, died recently at his home in St. John. He is survived by his wife, one daughter and two brothers. He conducted a lumber business for many years under the name of Alexander Watson, Ltd.

A new record for lath cutting in the province was recently established at the mill of J. & A. Culligan at Culligan, Restigouche County, when one machine cut 73,000 No. 1 laths in ten hours.

Starting from unknown causes fire destroyed the sash and door factory of M. Bertrand at Masham Mills, Que., recently causing an estimated loss of \$50,000, only partly covered by insurance. Efforts of the volunteer firemen to control the blaze were of no avail the plant being completely destroyed. Several thousand doors and window frames and lumber piles were consumed by the flames.

No effort will be spared this season by government officials in the Province of New Brunswick to increase activities for forest protection. The department of lands and mines has signified its intention of extending its system to greater protect the forests from fire and as a result the expenditure on this work will be quite heavy. It is estimated that \$75,000 will be necessary to carry out their programme. It is expected that more look-out towers will be erected and the telephone system extended between these towers. One tower will be at Mount Carleton on the head waters of the Tobique River and the other at the Narrows on the Nashwaak River.

The advance of lumber prices in the American market is being heralded with joy by shippers throughout the Province and from present indications it will not be long before this important industry will again be flourishing after years of hard and discouraging financing. It is with satisfaction that all learned that their product, which last year only brought \$32 a thousand is now being quoted at \$45 and the supply is said to be meagre. One large Boston buyer while travelling through the province, said that it is almost impossible to get the quantities or the dimensions demanded. He said that there is no doubt that the cut of 1922-1923 will bring better quotations than heretofore. As a result of this stated improvement lumbermen in the province are not over anxious to sell their new cut in advance and are holding back awaiting the best offer, which they figure will be forthcoming in a few months.

J. A. Gregory's band re-sawing and planing mill in West St. John was recently destroyed by fire. The fire broke out in the mill and the structure was destroyed before it could be extinguished. Besides the building all of the machinery, which included a band saw and two planers, was destroyed and also a large quantity of manufactured lumber. The loss was covered by insurance. This mill was operated by electricity and was working steadily. In conversation with a correspondent of the "Canada Lumberman" the owner, J. A. Gregory, announced that he has started re-building on a temporary plan. Later on when an opportunity is afforded he will construct a much larger plant.

# *East May Now Adopt Universal Grading Rules*

## *Tentative Regulations Drawn up Which Set Forth Everything in Direct Terms That are Easily Understood—Progress on Uniform Plan*

The Massachusetts Retail Lumber Dealers' Association, at a recent meeting held in Boston, adopted official grading rules for Eastern spruce and hemlock. It is proposed that these rules for uniform survey and grading should apply to the New England States, Eastern Canada and the Maritime Provinces. Prior to their being adopted by the Massachusetts retailers, they had been approved by eastern wholesalers and manufacturers, and have now been submitted to the Director of Standards for Massachusetts, Major Francis Meredith. The latter official, under a new state law, will call a hearing for the consideration of the tentative rules. It is predicted that no serious opposition will be offered from any branch of the lumber industry, in fact, it is declared that the rules will become official and put in force throughout the state in the near future. The regulations are set forth in plain, specific and direct terms and are easily comprehended.

A recent despatch from Boston says the Director of Standards believes that the working out of this problem by the state of Massachusetts, so far as eastern lumber is concerned, will be entirely acceptable to the Standardization Committees now laboring under the direction of Secretary Hoover of the U. S. Department of Commerce. Eastern lumbermen are of the opinion that the matter of sizes, both rough and finished, should be left for the final decision of the national standardization authorities.

The report of the joint committee is now before the Director of Standards for Massachusetts for final adjudication.

### **The Proposed Official Grading Rules**

Herewith are attached rules for uniform survey and grading for Eastern pine and hemlock produced in the New England States, Eastern Canada and the Maritime Provinces, as recommended by the Joint Committee on Grading Rules. The preamble is as follows:—

In preparing these rules the purpose for which each grade may be used has been considered in determining the number, size and position of the defects which it may contain and still be satisfactory for the use intended.

In considering and applying the following rules, the number and extent of defects allowed are understood to be proportionate to their damaging effect upon stock under consideration.

The grade shall in each case be determined by the number, character and location of the defects visible in any piece.

The description of grades following was intended to describe the poorest piece that any grade may contain. Each grade is to include all lumber between the next higher and the next lower grades.

All boards, either rough or dressed two sides, shall be surveyed on the best side to determine the grade. Those surfaced on one side shall be surveyed on the dressed side.

All lumber shall be surveyed and graded as to its full length and width unless so marked by the shipper as to indicate clearly that a portion of the measurement has been omitted to allow for defects.

In the measurement of all square edged lumber, fractions exactly on the one-half foot shall be given alternately to the buyer and seller; fractions below the one-half foot shall be dropped and those above one-half foot shall be counted to the next higher figure on the board rule. A piece tally in feet shall be made of all lumber measured. All lumber of standard grades and thicknesses shall be tallied face or surface measure and this tally shall be the number of feet, board measure, of one-inch lumber. If the lumber is thicker than one inch, one-quarter or one-half shall be added where the lumber is  $1\frac{1}{4}$  and  $1\frac{1}{2}$  inches thick. If the lumber is 2 inches or thicker, the surface measure shall be multiplied by the thickness. All lumber less than one inch thick shall be tallied face measure. When strips or stock widths are measured, a tally showing widths and lengths must be made.

### **Defects**

Recognized defects in eastern spruce, pine and hemlock are knots, knot holes, worm or grub holes, splits, shakes or

gum seams, wane, rot and imperfect manufacture. Bright sap shall not be considered a defect in any grade. Knots shall be classified as pin, small standard and large as to size; round and spike as to form and sound or loose as to quality.

The pin knot is sound and tight, not over one-half inch in diameter.

A small knot is not over three-quarters of an inch in diameter.

A standard knot  $1\frac{1}{2}$  inches in diameter.

A large knot is any size over  $1\frac{1}{2}$  inches in diameter.

A round knot is oval or circular in form.

A spike knot is one sawn in lengthwise direction.

A sound and tight knot is as hard as the wood it is in and is so fixed by growth and position that it will retain its place in the piece.

A loose knot is one not held firmly in place by growth or position.

The mean or average diameter of knots shall be considered in applying or construing the rule.

### **Worm or Grub Holes**

Worm or grub holes shall be classified as pin or larger.

A pin worm or grub hole is a hole drilled by an insect not more than one-sixteenth of an inch in diameter.

A large worm or grub hole is a hole drilled by an insect over one-sixteenth of an inch in diameter.

### **Wane**

Wane is a slabby edge on the surface, with or without the bark adhering.

### **Imperfect Manufacture**

Imperfect lumber is lumber so sawed as materially to tear or loosen the grain or so unevenly sawed as to prevent smooth dressing to standard sizes.

### **Gum Seams**

A gum seam is a well defined split filled with pitch or bark.

### **Shake**

Shake is the separation of the fiber of the wood in layers.

### **Rot**

Shall be classified as hard rot and soft rot. Hard rot is what is commonly known as red rot and is a reddish decay substantially as firm as merchantable lumber.

Soft rot is what is commonly known as honeycomb rot and is a reddish decay of a crumbling character.

### **Sap**

Sap is classified as bright and stained.

Bright sap is that which retains its natural color and shall not be considered a defect in any grade.

Stained sap is that which has been discolored and is permitted unless specially mentioned.

### **Burls**

Burls that do not contain knots or unsound centers shall not be considered defects.

### **Season Checks**

Ordinary season checks, such as may occur in lumber properly covered, shall not be considered as defects.

### **Eastern Spruce**

**Boards**—Spruce 1 inch in thickness shall be graded as clear, No. 1, merchantable, No. 2 and culls. In the following descriptions, a piece 1 x 6, 12 feet long, is being described.

**Clear and No. 1 Spruce**—Clear and No. 1 spruce 1 inch in thickness shall be 6 feet and upwards in length and 3 inches and upwards in width, provided, however, that there shall not more than 5 per cent of 6-foot lengths and 10 per cent of 3-inch widths in any lot.

**Clear**—Clear shall be well manufactured, square butted

and free from all defects, except slight wane and slight stain, both of which will dress off in planing to standard.

**No. 1**—No. 1 shall be well manufactured, square butted, may have slight wane and slight stain and a few small sound knots, equivalent to four pin knots, provided these knots are scattered and provided the board shows clear edges.

**Merchantable Spruce**—Merchantable spruce 1 inch in thickness shall be well manufactured, 8 feet and upwards in length and 4 inches and upwards in width provided that there shall not be more than 10 per cent of 8-foot lengths or 10 per cent of 4-inch widths in any lot.

In addition to the defects permitted in No. 1 grade, it may have wane for one-third of the length of the piece, provided there are three square corners. Some stained sap, if otherwise sound, shall be permissible, but this grade shall be free on both sides from very large, coarse, or loose knots, knot holes, or large worm holes, gum seams, shakes, splits and rot.

**No. 2 Spruce**—No. 2 spruce shall be 6 feet and upwards in length and 4 inches and upwards in width. It shall be well manufactured, but shall permit any one of the following defects: Hard rot on one side, wane for one-third of the length of the piece, provided there are two square corners, gum seam or check extending not more than 2 feet from the end of the stick, large or loose knots, knot holes, worm and grub holes, stain or shake covering one-third of the stick. All boards are to be nailing sound.

**Culls**—All boards falling below above grades shall be classified as culls, but must be sufficiently firm to hold together when properly handled.

#### **Spruce More Than 1 Inch in Thickness**

Spruce over 1 inch in thickness shall be graded as clear, No. 1, merchantable, No. 2 and culls.

**Clear and No. 1**—Clear and No. 1 shall be 8 feet and upwards in length and 3 inches and upwards in width, provided that there shall not be more than 10 per cent of minimum lengths and 15 per cent of minimum widths in any lot. Defects similar to those permitted in clear and No. 1, one inch spruce, are allowable.

**Merchantable**—Merchantable shall be bright, sound,

strong lumber, well manufactured, free from shake or large gum seams that would materially impair its strength and form loose or rotten knots, worm or grub holes, or rot. Wane for one-third the length is permitted, provided there are three square edges. Two by 3-inch, 2x4-inch, 3x4-inch shall be 8 feet and upwards in length. Larger sizes shall be 10 feet and upwards in length. Shorter lengths shall be included in No. 2 grade.

**No. 2**—No. 2 spruce shall be suitable for all ordinary construction purposes without waste. In addition to the defects allowed in merchantable, it may also have sound and light standard knots in 2x3-inch, 2x4-inch and 3x4-inch and proportionately large knots in larger dimensions; spike knots that do not materially weaken the piece; wane, not over one-third the thickness of the piece, nor more than 1½ inches wide on the face up to 6 inches and 1¾ inches wide on the face up to 8 inches or wider, or a proportionate amount for third the length of the piece, or a proportionate amount for a shorter distance on both edges; hard rot covering one-twelfth of the surface on one side; a very small number, not to exceed one in every 2 feet, board measure, of large worm or grub holes.

**Culls**—All spruce falling below the above grades shall be classified as culls, but must be sufficiently firm to hold together when properly handled.

#### **Eastern Hemlock**

Hemlock shall be graded as merchantable, No. 2 and culls.

Merchantable boards shall be 8 feet or more in length, and 5 inches or more in width. Dimension lumber, 2x3-inch, 2x4-inch and 3x4-inch, shall be 8 feet or more in length, and larger sizes shall be 10 feet or more in length.

**Merchantable**—Shall be sound and free from loose knots, wane, splits, rot or shake which would impair its strength.

**No. 2**—Board may have wane, shake, hard rot on one side and splits extending not more than 2 feet from end, but must be nailing sound.

**Culls**—All hemlock lumber below above grades shall be classified as culls.

# What Motor Truck Delivery Has Done For Our Lumber Business

By "Co-operation"

Editor, Canada Lumberman:—

Your recent letter to us asking for information regarding our deliveries came to hand and we will endeavor to answer same to the best of our ability.

Some time ago we were approached by Mr. Blank who represented the "Ibex" truck, and, after a considerable time spent in discussing trucks and their relation to the retail lumber dealer, we purchased the one which he was selling.

Our equipment today consists of three trucks of two and a half tons carrying capacity, fitted with closed cabs and roller bodies, and having stake sides. They are equipped with electric lights and oversize tires, one being on pneumatics, the other two on solid tires. We have found that the one on pneumatic tires is best for delivery to new property and for use in part of our out-of-town delivery where there is considerable sand to be gone through. The other two are used locally for delivery within the town and also out of town, where the roads are more improved. We also unload all our lumber by trucks and keep only one horse for work around the yard and short delivery.

Up to the time Mr. Blank visited us, we had used horses exclusively and were not inclined to discuss the use of trucks, but today we would not go back to delivery by horse-drawn waggons, I will endeavor to explain our attitude for the benefit of some of our fellow-retailers.

Some of the results we have achieved are these:—

Our business, which was previously local, has now become very

nearly as large away from home as we formerly did in our own town, and this can be attributed solely to our use of motor trucks. We would not believe this when first approached by the truck salesman, but are pleased to say now we have been completely converted to motor delivery, because primarily it has increased our business over a hundredfold and at very little more overhead expense, that is what makes us most enthusiastic.

Our appropriation for advertising has been somewhat curtailed because our trucks are now in nearly every village and hamlet within forty miles of us, once each day and our name is constantly being read by people whom we could not reach by means of the local paper. Seeing our trucks on their streets is a greater benefit to us than by putting our advertisement in papers which they read.

#### **How New Business Is Developed**

Each driver is bonused for new business he obtains away from home and also for any direct repeat trade he secures when delivering his load, so that we really have a force of salesmen out working for us every day in the year.

As a direct result of truck delivery we have added to our mill three times since purchasing our first truck, and that alone shows us that we have increased our business as the local turnover was never great enough to tax our plant to its capacity, so you can see that we must be really glad to have been shown what trucks would do for us here in a small town.

Regarding your questions for some of the reasons we used against buying trucks, I can only say this that we were doubtful

of the returns to be gained through delivering by truck, and as we had always used horses, we could not see why we should change.

I believe that we spent a great many hours in really trying not to see what good a truck would do us. We were not doing our figuring correctly, because we had no idea as to what we could do with a truck, and only based our figures on local work, but to-day we are basing our operating costs on a mileage five times as great as when we were discussing the proposition with Mr. Blank, so that we were wrong when we argued with him that our delivery would be too short to use trucks. Also due to ignorance, we were in error again when we tried to figure out the cost of running the truck because we had only our previous experience with horses to guide us.

#### Glad Did Not Cancel Order

To tell the truth, we were afraid to take the chance and invest the necessary money to purchase a truck. How we did it or why, I do not know but Mr. Blank had so much persistence and seemed to know exactly what he was talking about, that finally we decided to give him an order for the truck. To tell the truth, we came near cancelling our order before we got delivery, but we are sure glad to-day that we did not as that first step has meant to us an increase in time, I can now spend a few hours at the bowling green and away from home; and it has also meant many things for my family that I know could not have come if we had not used trucks to deliver our lumber. Their use has increased our business and enabled us to have more leisure than could have been possible as we were working before.

We have speeded up our entire plant, due to more rapid delivery of the finished goods, and it seems as if the men have gotten a new idea of time and instead of being ahead of the delivery as before, they are kept busy endeavoring to keep up with the pace which our delivery system sets, so that all through, we are benefiting by using trucks.

When we unload cars of rough lumber from the station we use a trailer, which we made ourselves and have not yet paid a cent to the railroad company for demurrage. We used to be paying then on nearly every car which came in because we could not unload lumber and make delivery at the same time.

I will give you a few items of cost delivery as taken from recent statements, and hope they are of interest to some of your readers. In order to make them more clearly understood, I will put them on a chart form which we use here, and which, while designed at home, serves to give us at a glance all the data which is required to know what it costs us to operate our trucks.

We are very pleased to be of any slight aid to you and can say again that we are glad we operate trucks to deliver our lumber. We are doing a greater business now than before and feel that we could not have achieved this were we not using trucks.

#### Daily Report from Each Driver

We might say that each driver makes out a daily report covering the gasoline and oil he uses and our own yard foreman furnishes the repair items, so that we have very little added clerical work in keeping these costs. Our mileage is correct as we have an odometer attached to each truck. You will understand that the totals of mileage, etc., are only obtained at the end of each period which, with us, is the current month.

The figures I am giving you are for the past year on the first truck we purchased and are very favorable when compared with the report of the previous year covering the same truck.

From this chart you will see that we are taking care of depreciation of our truck over a fair life and also allowing ourselves a fair rate of interest based on a six-year life figured from this formula.

$$\frac{A \times 1}{A} \times \frac{R \times C}{2}$$

where A is the number of years of life

$$\frac{A}{A} \times \frac{2}{2}$$

estimated and R is rate of interest and C amount of investment.

We use this chart for each month's recapitulation and also at the end of the year, and can easily fill in the totals from daily reports turned in by the drivers.

We do not put a helper on each truck except when unloading from the cars or in cases of extreme necessity.

Again let us say that we are satisfied with the performance of our truck and would be only too glad to assist any of your readers who would care to go over our charts and enquire more closely into our operating costs.

Yours sincerely,  
Co-operation.

### Newsy Paragraphs of Great Industry

W. F. Beck, of the C. Beck Mfg. Co., Penetanguishene, Ont. and Mrs. Beck are spending a few weeks in Florida.

K. M. Brown, sales manager of the A. E. Gordon Lumber Co., Toronto, who was laid up for several days with illness, is able to be around again.

J. O. Oliver, of the Oliver Lumber Co., Toronto, and Mrs. Oliver, who have been spending the past few weeks at Miami, Florida, have returned home.

The A. E. Gordon Lumber Co., Limited, of Toronto, have bought the entire output of G. Mason & Company's plant at Midland, Ont., for the coming season. The cut will be about 16,000,000 feet.

Donald A. Clark, timber contractor of Port Arthur, Ont., recently purchased from a firm in Montreal 10 square miles of exportable spruce timber suitable for pulpwood. The location is in the vicinity of Nipigon.

A. N. Dudley, wholesale lumber dealer, of Toronto, and Mrs. Dudley, have returned from spending a delightful holiday at Summerville, S.C., where he managed to get in some good practice at golf. His friends believe that he will have no difficulty in capturing the Laidlaw cup again this year in the Wholesale Lumbermen's Association tournament.

Notice has been given that at the coming session of the New Brunswick Legislature a bill will be introduced to revive and continue the act passed in 1920 incorporating the Fraser Paper Company, Limited, under which rights and privileges in connection with proposed mills and development upon the Tobique River were given.

Many citizens of Omemee, Ont., are not aware that the village is to have in future an up-to-date wood yard. Last year the John Carew Lumber Co. purchased a large quantity of timber from George Brown and after clearing off the largest timber, there was much valuable wood left behind which Alf. Lloyd and Victor Mitchell secured and cut into cord wood.

In the Sherbrooke district, Que., considerable activity is reported in the lumber and pulpwood arena and as a result prices for various grades of lumber have advanced considerably. Indications also point to a heavy demand in pulpwood this spring and the stocks of American mills are said to be pretty well exhausted. Prices are now being offered by American buyers in the vicinity of Sherbrooke, ranging from \$12 to \$13.50 per cord.

After putting up with the refusal of the Doukhobors for years past to obey orders to employ licensed scalers at their lumber mills in the district, the forestry department at Nelson, N.B., seized two cars of lumber from the Crescent Valley mill belonging to the Christian Community of Universal Brotherhood, and also quantities of poles. The case will be fought out in court.

It is reported that Sir William Price, of Quebec, is interested in a big paper mill which will be erected by the McArthur interests at Fort Alexander this summer. A recent despatch from Winnipeg says that the private bills committee of the Manitoba Legislature had under consideration a bill to incorporate the Fort Alexander Railway which will run from a point on the Grand Beach line of the C.N.R. to the site of the works on the Fort Alexander reserve. The bill was ordered reported with a few minor amendments. The estimated cost of the road is \$15,000 per mile. The financing of the whole enterprise comprises a million and a half dollars in bonds and two and a half million dollars in preferred stock. There are from three to four million cords of pulpwood on various limits leased by the company which for financing purposes are valued at a million dollars.

# Selling the Great Heritage of our Children for Mere Mess of Pottage

By Fred. Brown, Fort Frances, Ont.

Fred. Brown, Fort Frances, Ont.

On the financial and market pages of some of our leading Canadian papers appear the half yearly returns of exports of pulpwood. For the first 6 months of 1922 Canada exported 506,012 cords of pulpwood, valued at \$5,229,901, or an average return of \$10.33 per cord. For the corresponding period of 1921 the figures are 421,388 cords, valued at \$5,546,785 or \$13.00 per cord. During the first 6 months of 1922 we exported 84,624 cords of pulpwood over the amount exported during the corresponding period of 1921. Surely a wonderful achievement, considering that one cord of pulpwood, manufactured into paper, brings according to quality from \$50 to \$75 per cord. We have deliberately deprived the people of Eastern Canada in the first 6

months of 1922 of something like from \$25,300,600 to \$37,950,900. If this amount of money had been put into circulation in Canada, it would have affected a good many wage earners; it would have affected our publicly owned railroads; it would have affected business in general, retail, wholesale and manufacturing; it would have been an effective boost towards continuous prosperity. And what did we get in return for our 506,012 cords of pulpwood, besides the pottage of \$5,229,901.00? We have acquired, to be sure, about 126,000 acres of stumps, a lot of tops and branches, an extremely fertile ground for fires and one of the best breeding places for injurious insects.

We are having the best chances, under present prevailing conditions, to stand a further loss within the next 30 years, on these very same 126,000 acres, of at least thirty million dollars in potential timber values destroyed by fires.

## Viewing Grave Problem With Apathy

The second growth, as well as any further efforts of Mother Nature to reforest these 126,000 acres will fall a victim to the red demon unless present conditions are changed for the better at a very short notice; not to mention the burning out of the fertility and virility of the soil. Surely our export business in pulpwood is a big paying proposition—for the importer only; and a curse for Canada. It is just as stupid and criminal, as is our indifference to the fires, which the owners of the forests, the people of Canada, view with very much apathy. The people of Canada own about 80% of the present timber supply; how much longer will the people stand for such exploitation of its best inheritance?

Deny whosoever has the cheek to deny it, in order to obtain five million dollars, we are giving the buyer a premium of from twenty to thirty million dollars. No farmer, no peddler of shoe-strings, no commercial house of any kind would follow a policy so foolish, so criminal, so wasteful, and yet some of our leading Canadian dailies point with pride to the fact that we have exported in the first six months of 1922 over 84,000 cords of pulpwood more than in the corresponding period of 1921 and for these 84,000 cords we received \$316,000. To put it in another way; We had to give the buyer a premium of 84,000 cords or we denuded 21,000 acres of forest, to make the price received for the first 6 months of 1922 correspond with prices obtained in 1921.

## Favors Export Tax on Pulpwood

These conditions must be changed and changed in the immediate future. I can point to one way only and that is to ask your servant, your representative in the Provincial House as well as in the Dominion House to support any measure that puts an export tax on pulpwood, regardless of original ownership; and if he fails to accede to your wishes, remember him, when he comes around in the course of time to shake you by the hand.

And how about the farmer? Does the farmer know, and does he realize that he is the heaviest consumer of wood and wood products (lumber, lath, shingles, fenceposts, corncribs, etc.) Does he

realize that in the same ratio as the lumber supply and pulpwood decrease in the Republic to the south of us, the stumpage value of timber and pulpwood increases in Canada? Does he realize that every dollar increase in stumpage means an increase in logging operations, in milling, in marketing and finally this increase all along the line is passed up to him as the heaviest consumer of wood. Furthermore, does he realize that in the not too far distance of time he will have to pay for inferior lumber as much as he is paying to-day for clears and finish and uppers?

Does he realize that by creating 126,000 acres of fire menace and dormant destruction in six months time, he lays up for himself as well as for the whole populace, his children and everybody else's children and grandchildren the seed of untold misery in the form of disaster, barren lands, too poor to harbour a coyote; in the forms of droughty dry seasons (a continuous fear of some reckless, brainless fool setting the country afire), in the form of floods, destruction and desolation, and on the slopes of mountains and in valleys, he gets in the bargain snow avalanches and snowslides, destructive to human life, to livestock, to habitations and to fertile fields.

## The Sad Plight of Michigan

Furthermore, do the farmers realize that with the green forests gone from the close vicinity of their farms, the chances of keeping the sons at home and on the farms are constantly decreasing. Take the State of Michigan, for an example, from 1870 to 1900, Michigan has had the lead in quantity, quality and value of timber exports. During these 30 years of seemingly lasting prosperity the cry of unlimited timber resources resounded, mostly all of Michigan's homes were built out of Michigan's cheap lumber, then on the market. To-day conditions have changed. The Hardwood Manufacturers Association sent out a circular not so very long ago asking for information as to how to go about to keep the bush worker in the State, inquiring what had become of the older, more experienced ones, and wondering why it is that the bush workers do not settle down. The reason is not far to seek. The lumberjack has migrated with the mills to the Pacific Coast, where housebuilding is cheap, where stands of timber give him an assurance of employment the whole year round and where he can get his wood and lumber at a reasonable price. To-day Michigan does not even supply its own need of telephone posts, of fence posts and railroad ties. A lot of the paper on which the daily news is printed is manufactured from Canadian spruce.

It is manufactured from Canadian Spruce, to be sure and it is not imported from Canada. Oh no! Michigan's freight bill on lumber imported from the Pacific Coast States is over 2,000,000 dollars a year. What will Eastern Canada's freight bill be, when the lumber comes from the far north and from the Pacific coast? And if that supply fails and begins to peter out in the next 10 year or so, then we might import a little lumber from Russia and by so doing we might stabilize the rubble. We might import some lumber from South America, but stop to think; sometimes nations do fall out amongst themselves and quarrel and fight, like families and members of a family. By all observations gained from the late war it is no easy matter to import lumber and timber during wartime, as the other fellow may want that particular cargo a blamed sight worse than we do.

## Why Not Put Land Back in Pine

Have the farmers of Canada ever stopped to think that pine land is not exactly the richest land, as pines follow sand as sure as cedar follows swamps. After a half dozen successive plowings and cultivating and cropping to cereals, the sand begins to shift, how it flies and settles, in mounds, in ridges and in every geometrical figure. What is level to-day is a ridge tomorrow or a mound; in dry springs, seed gets blown out, one family quits, another family is optimistic or foolhardy enough to try and get the worst of the fight, the second family get broke, stone broke, and low and behold one fine day somebody realizes that it is a big job, a tremendous job to anchor down that quarter or half, or section, or township or perhaps quarter or more of a county? Why not put it back into pine in the first place? Why waste time and money on it? Surely we do not need a soil survey or a chemist to find out whether pine will grow, where they have grown once before?

No amount of urgency can hasten, no amount of money can shorten the time that is required to grow a saw log or a pulpwood log. The average sawlog of to-day is about 250, and the average

spruce for pulpwood is about 100 years old. It is up to the forester to match species to the right soil and by helping here and there we can get along in a pinch, a pinch that is coming as surely as day follows night and sunshine follows rain, with sawlogs 100 years old or less and with pulpwood that is from 30 to 50 years old.

#### Raising Timber or Giving Premiums

Having most of the facts before us for some time, it remains only to decide whether we want to start raising timber, or whether we want to keep giving premiums with our export pulpwood, or whether it is better policy to turn this country into a barren, desolate, uninhabitable spot of God's once wonderful creation, an everlasting accuser of man's stupidity and cupidity, an everlasting accuser of the inefficiency of Governments, and everlasting repetition of the Biblical parable of Esau trading his birthright for a mess of pottage.

#### Conditions in New Brunswick Are Good

A representative New Brunswick lumberman, in reviewing conditions generally in that province, in a recent letter to the "Canada Lumberman," says:— Of course, you understand there was very little done in the winter of 1921-22, therefore, the 1922-23 operations must be considerably increased. I would judge that the total cut of lumber in the province will be 60% more than 1921-22 cut, but you must bear in mind that there was a large quantity of logs carried over in the year 1921-22 to be sawn up whereas, very few logs were carried over last fall, the parties sawing and realizing. With this fact in mind, I would say that the general increase in the woods operations this year is about 60% greater in the province, but there would not be over 35% of an increase on the Miramichi and the northern section. The Bathurst Company, Limited, is drawing a large portion of its requirements from Quebec.

The cut this year has been increased to some extent by the desire to get as much bud worm killed stock cut as possible and a supreme effort is being made in this direction to cut it before it is attacked by the borer.

The English market does not look as encouraging as it did five or six weeks ago; in fact, we have considerable apprehension as to the benefit this market will be to us in the coming season.

The American market, however, appears strong for anything that is now ready for shipping or will be ready between now and the first of July, but very few American firms are willing to speculate after that date.

The cost of production in New Brunswick was increased owing to the very heavy snow storms. These also had an effect of cutting off the production as in some portions of the province, particularly in Kent and Westmorland, the parties had to withdraw from the woods early in the season. There seems to be sufficient men to carry on the work that is contemplated but no excess.

There has been no reduction in the past year in the cost of provisions; in fact, there might be said to be a slight increase.

The car shortage has very much interfered with shipments in New Brunswick. Ocean Freights are still too high; 65 shillings being asked to the British market. This should not exceed 50 shillings to make it possible for trans-atlantic shipments.

The car shortage is still existing and is most detrimental to business. The blame is put on the American roads but we think the Canadian roads should make provision to supply cars in the interests of trade shipping at the present time would bring back a great deal of money to the Canadian lumbermen.

#### How New Brunswick's Timber Decreases

That New Brunswick's timber supply during the past five years has been reduced by means of the axe, fire and budworm five times as fast as it is being grown, was one of the arresting statements made recently at the Rotary Club Luncheon in Fredericton, N. B., by Chief Forester G. H. Prince, of the Department of Lands and Mines. Mr. Prince stated that the total estimate of dead lumber resulting from the depredations of the spruce budworm has been placed at between eight and nine billion feet. In 1921 the statistics referred to showed 121,000 cords of wood had been manufactured by New Brunswick's pulp mills, while the amount exported in an unmanufactured state was 213,000 cords.

#### Demand for Canadian Spruce Abroad

We do not appear to have made much progress during the past two weeks in forward buying of spruce, and it would seem that the most probable cause of this hesitancy on the part of buyers is the very unsettled political situation in Europe, says the "Timber Trades Journal," of London. In the first place, France, Italy and

many other countries are not able to absorb the goods we were formerly accustomed to sell in that direction, and this tends to reduce very considerably the activities of the case trade. India, too, has not yet resumed buying cotton goods, and Lancashire suffers accordingly.

These results are partly because of exchange depreciation, and also owing to the general lowering of the standard of living.

In spite of the fact that cotton goods are beginning to find a market again, there is still a tremendous leeway to make up before anything approaching full time can be expected at the mills. Reports from woollen centres are more favorable, and there is a marked improvement in iron and steel, shipbuilding and railroad requirements.

The probability of a successful termination to the Turkish problem is another factor that should help to restore the confidence and security which is essential to the building up of stable business. Under these conditions we are surely justified in maintaining that the prospects for next season are brighter than last.

While considerable use is made of spruce on the West Coast of England and in Ireland for building purposes, there is not much outlet on the East Coast, and this is a matter of considerable surprise to our Canadian friends, who, living in a climate that contains many varieties and extremes, find their native spruce quite suitable for the job. Indeed, many examples can be found, in the smaller towns, of wooden houses, fifty to a hundred years old, and still occupied.

The usual practice is to use a concrete foundation and build the frame on that, so that the spruce does not come in contact with the ground.

Although the quantity of timber used in the construction of a house in this country is comparatively small, we cannot afford to overlook any opportunity to economise.

Knowing, as we do, that Canadian spruce is used in other parts of this country for building purposes, and that there are no official restrictions against its use in the London district, it surely is at least deserving of a fair trial.

Comparisons should only be made with the clean, sound, well-manufactured productions of the best Canadian mills, instead of recalling the very poor Government stocks that were left lying around in Eastern Canada, and afterwards in this country, for years.

Railway wagon stock is another direction where spruce, by reason of its toughness, can be used profitably.

Sales from stock just now are steady, but not large, and prices are less than the cost of replacement.

Pine is selling slowly, but the stock is decidedly low, and there is the prospect of fresh stocks at slightly lower prices.

#### Brokers Selling Below Producing Costs

One firm from the Cobalt district in Northern Ontario says:— "We increased our cut last year by about 25% and profits were better than the year before. Our stock is smaller than it was twelve months ago and our log output this winter will be considerably ahead of last season. The cost of production with us is about the same. The market price for lumber is up from \$2 to \$4, and Toronto brokers have been selling below cost of production."

James Ludgate of the Schroeder Mills & Timber Co., Pakesley, Ont., snapped on a recent visit to one of the company's camps after a big snow storm.

# What the Lumber Trade is Doing in Canada

J. P. Abel-Fortin, Limited, Montreal have obtained the contract for all the interior trim and doors for the new Notre Dame Hospital, Montreal.

James A. Stewart, Limited, Port Arthur, Ont., is a new company recently formed to engage in the manufacturing and marketing of pulpwood, ties and lumber. Capital \$100,000.

Elisee Masse, St. Hubert, P. Q., will start work shortly on the erection of a sawmill.

D. A. Downey & Co., of Drayton, Ont., are well-known builders and contractors and have been in the business for the last thirty years. They recently purchased the planing and sawmill of S. P. Treleaven, of Drayton, and are now in a position to manufacture everything required for building or construction purposes. Downey & Co. are also conducting a live retail lumber yard in Drayton.

W. P. Clark, of Moorefield, Ont., who is well-known in that vicinity, has recently started a lumber business. He also operates a coal yard, and to round out his activities, is proprietor of a drug store.

George McAllister & Sons, Limited, of Guelph, Ont., who are manufacturers of slack cooperage stock and lumber, had their sawmill at Bloomingdale, Ont., wiped out by fire recently. The loss to the firm was about \$10,000, which was almost half covered by insurance. The company are rebuilding the mill and expect to be running again in about four weeks.

The New York State College of Forestry at Syracuse University announces a Short Course in Dry Kiln Engineering to be given for the benefit of members of the lumber manufacturing industry. The course will begin March 27th and last until April 6th, inclusive.

It is understood that the Dryden Paper Co., of Dryden, Ont., hopes to have an additional power plant and paper-making equipment in the near future when the concern will be in a position to improve its earning power considerably. 1922 was a fair year with the company, particularly the latter half but during the first few months the market for sulphate pulp, which is the chief product of the organization, was very dull, Scandinavian pulp having been competing in the United States market.

William Bowman, formerly foreman of the woodworking department of Orillia Carriage Works, has started manufacturing truck and auto bodies in Galt. The new enterprise has secured sufficient orders to keep it busy for some time in the plant at the corner of Colburne and Water Sts.

The planing mill of Stuart Bros., Hyde Park and Aberdeen Ave., Hamilton, was destroyed by fire recently causing an estimated damage to building and contents of \$15,000. The owners expect to rebuild at a convenient date.

The Imperial Forestry Conference which will meet in Canada at the end of July next for six weeks of conference and investigation of Canada's forest conditions, will introduce to this country many of the most successful conservators and forestry leaders of the British Empire, including Lord Lovat, Chairman of the British Forestry Commission, who made a great record as head of the forestry operations in France during the Great War.

An interesting address was recently delivered before the St. Mary's Club in the Knights of Columbus Hall, Owen Sound, by James E. Keenan, of Keenan Bros., Limited. Mr. Keenan's talk was most instructive and he advised the boys strongly to set a high standard of living and to prepare themselves for the duties that good citizenship involves.

J. A. Gregory's sawmill at Old Fort, West St. John, N. B., was completely destroyed by fire recently. It is thought that the blaze started in a motor which furnished power for the mill. A short circuit is supposed to have been the cause. The replacement value of the mill is estimated at \$12,000 and the building and contents were only partially covered by insurance. There was considerable lumber piled near the structure but the damage to this was not heavy. Mr. Gregory announces that the plant will be replaced as speedily as possible.

A bill has been introduced in the Ontario Legislature by Hon. Beniah Bowman, Minister of Lands and Forests, to amend the Reforestation Act of 1921. The amendment says that the Minister may, on behalf of the Crown, without the consent of the owner thereof, enter upon, take and expropriate any land in Ontario which the Minister may deem necessary for reforestation purposes, and may lease, sell or otherwise dispose of the interests of the province in any land thus leased, purchased or expropriated or the timber thereon.

David Curtin, who died recently in Peterboro, had been in the lumbering business all his life, being woods manager for the Alfred McDonald Lumber Co., for the last eighteen years. The late Mr. Curtin was a respected and trustworthy employee and a man of strong personality. He is survived by his wife, five sons and two daughters. He was born in Ennismore Township sixty-nine years ago.

L. L. Brown, of Toronto, B. C. Lumber Commissioner for Eastern Canada, and L. W. Walker, eastern representative of the Forest Products Market Extension Bureau of British Columbia, spent a few days recently in New York on business.

Jenings & Baily, who operate at Baptiste, in Hastings County, Ont., state they are taking out 2,000,000 feet of logs this season consisting of pine, hemlock, spruce and hardwoods. The firm add that "it has been a real winter for logging in their locality with just enough snow for hauling. The outlook in the lumber business seems to be more promising than it has been for some time and there is apparently a good demand for the better grades of hardwood." Many inquiries have been received from the United States, while information in regard to dry softwood is also much sought after. About thirty per cent more logs will be taken out in and around Baptiste this season than a year ago, with wages 15 to 20% higher.

## Rules for Piling Lumber for Air Seasoning To Avoid Deterioration

### 1. Foundations

(a) The foundations should be strong and durable.

(b) The top of each foundation should be level; and from front to back the top surface of the parallel skids should be in alignment, so that the lumber to be piled will bear equally upon each one.

(c) The first skid should be raised above the second and the second above the third to allow a slant to the stack of one inch to every foot.

(d) The skids, preferably 2 by 4-in., should be spaced not over four feet apart, except for heavy planks and timbers.

(e) The foundations should be of sufficient height to provide space for free circulation of air under all parts of the pile.

### 2. Lumber

(a) Boards of equal length should, preferably, be piled together.

(b) The ends of the boards should rest upon the front and rear skids.

(c) A space approximately  $\frac{3}{4}$ -in. should be left between boards in the same layer when piling 1-in.,  $1\frac{1}{4}$ -in., and  $1\frac{1}{2}$ -in. lumber; 2-in. for 2-in. and  $2\frac{1}{2}$ -in. lumber; and 3-in. for material 3-in. and up.

(d) Lumber piled in the open should have the front ends of boards in each layer slightly protruding beyond the end of the layer beneath in order to provide a forward pitch to the stack of 1-in. to each foot in height.

### 3. Stickers

(a) Stickers should be surfaced two sides and should be 2-in. wide, of uniform thickness, preferably  $\frac{1}{8}$ -in. for 1-in. lumber and  $1\frac{1}{2}$ -in. lumber. Their length should be a few inches in excess of the width of the pile.

(b) Stickers should be placed upon the layer of boards immediately over the skids and kept in alignment parallel to the front of the pile.

(c) The front and rear stickers should be flush with, or protrude beyond, the ends of the boards.

### 4. Roof Protection

Cover boards, as a roof protection, should be laid on the top of the pile, extending a few inches beyond the front and rear of the stack.

### 5. Spacing Stacks

Space between the piles should not be less than two feet and increased to four or five feet if yardage conditions allow.

### 6. Dimensions of Stack

The customary width of the stacks is from four to eight feet. The height is governed by the size and the character of the lumber and the methods of moving it.

### 7. Treated Ends

Lumber  $2\frac{1}{2}$ -in. thick or over, unless of the lower grades, should have the ends treated with a brush treatment of paint or some liquid filler.

### 8. Ground Cover

The ground occupied by lumber piles should be covered to a depth of at least 4-in. with cinders (not ashes).

# What Greater Use of Aircraft Means in Forest Survey Work, Fire Protection and Steady Development of National Activities

\*By J. A. Wilson, Ottawa  
Secretary of Air Board

I should like to pay my tribute to the great part that the lumber industry has played in the development of aviation in this country. It is not too much to say that without the encouragement and practical support we have received from the industry throughout the country, Civil Aviation could have made little progress during the past three years. This is not only true of the Government service, but it is also true, perhaps in a greater degree, of the steadily growing commercial field for aviation. The success of commercial aviation in this country will continue to be dependent in a large measure on the support given it by lumbermen for some years.

In European countries and the United States, Commercial Aviation is endeavoring to develop mail, express and passenger services. In this country no effort has been made along these lines. It is felt that until success is achieved, in countries where the population is more dense, the need of such services more urgent and the climatic and natural conditions easier, such services in this country can wait.

We are fortunate, however, in having a great field for aviation in the remoter parts of the country where communications are now slow, uncertain and laborious, and travel is conducted by canoe and pack pony, or dog train in winter time. No attempt has, therefore, been made in Canada to compete with the steamship, train or motor car. Almost the whole effort, and certainly the soundest part of it, has been to develop aerial transportation, for purposes where more efficient transportation methods are an urgent need.

Until the time of the Armistice, aircraft were considered almost wholly from their military usefulness and even today many people consider them just as they would tanks, guns or torpedoes. Those who had watched development of aviation during the war and who were interested in the opening up of the vast areas in Canada beyond the railway belt, recognized the importance of the new form of transportation. They realized the great part aircraft could play in the hastening of this development. Fortunately, throughout almost all this area, travel by water is possible. It is a region of lakes and rivers. This makes the use of the flying boat possible and does away with the great bug-bear of providing landing grounds throughout the territory to be flown over. If this were not so, it would be practically impossible to contemplate the use of aircraft over much of our territory, as the cost of levelling and preparing landing grounds would be prohibitive.

Foresters quickly realized the importance of aircraft in their operation and the assistance they could lend in controlling forces working over widely scattered areas, where communications were imperfect and slow. They perceived their value as an instrument for increasing the efficiency of their fire fighting forces and as a method of observation impossible to improve on.

## The Inception of the Service

The credit of undertaking the first experiment in this work lies with the Laurentide Pulp and Paper Company and with Mr. Ellwood Wilson, Chief Forester, to whose initiative and energy aviation owes much. The Provincial Government of Quebec also shares in this credit. Recognizing its great possibilities, they supported the experiment with a substantial grant which made its execution feasible. Hon. C. C. Ballantyne then Minister of the Naval Service, and his Deputy Minister, Mr. Desbarats, in authorizing the loan of machines to carry out the experiment, never made a wiser decision, nor, I am sure, one on which they may look back on with greater satisfaction.

During the summer and fall of 1919, two machines were operated from Grand'Mere and the results obtained showed clearly the possibilities and encouraged those responsible for the experiment to make greater efforts during the following year. It also encouraged the Air Board, formed during that year, to set up similar units in 1920 to undertake forest fire prevention patrols and the exploration of the forest resources in the reserves under control of the Dominion Government. It also showed the way to other commercial firms starting such services.

In 1920, the Government authorized the Air Board to undertake flying operations and voted funds for the erection of stations in British Columbia, Alberta and the Province of Quebec. The results obtained in 1920 were most encouraging. In 1921 the service was

further extended by the addition of units in Manitoba and Northern Ontario. The work in Quebec and Ontario was undertaken on repayment for the Provincial Governments. This was not for the primary purpose of fire prevention, but rather for forestry survey and exploration work in regions of which little was known, but which were becoming rapidly important from a commercial point of view and regarding which definite information was required in order that the areas might be proved before they were thrown open to operations.

At all stations except Camp Borden forestry work of one kind or another is the main basis of our work and, though many other subsidiary operations have been undertaken with varying success, yet it is not too much to say that on our usefulness to the forestry service depends our success.

## Wherein Its Usefulness Lies

In the mobility of aircraft lies its usefulness to the forester and lumberman. Journeys which took days and sometimes weeks by the old methods of travel can now be done with ease, safety and comfort in an hour or two. It enables those responsible for the supervision of operations in the woods to oversee personally the work. The chief fire ranger can in time of emergency reach the scene of an outbreak within an hour or two of its being reported and can see for himself the situation and organize his forces to meet it to the best advantage. The manager of the logging operations can visit logging camps in a day and see for himself the work under way and in a few hours the superintendent of the drives on the rivers can watch the progress and follow the drive over hundreds of miles of stream. In a few hours fire fighting equipment and parties can be transferred from point to point as required, with speed and certainty. Fire fighting parties can be maintained, fed and provisioned, and daily reports on the progress of their work forwarded to Headquarters. All this changes completely the conditions of these operations and can be made to increase their efficiency tremendously by enabling closer supervision to be exercised.

There is no intention on my part to maintain that flying will

A comprehensive view of virgin forest in France, taken by a Canadian soldier, and showing some of the tallest monarchs in that country

\*Address delivered recently before the C.L.A. convention in Montreal.

supercede any essential ground work now undertaken in the woods. Fire fighting must be done on the ground, but everyone will recognize the importance of early information on the outbreak of fire. An aerial patrol gives you this and enables you to put your force to work in the danger area with a speed and certainty that cannot be obtained any other way. In new territory of which the maps are imperfect or perhaps non-existent, information can be obtained by survey from the air, by sketching, supplemented by photography, which it would take months, if not years, to obtain on the ground. The same way in timber cruising, the general situation can be seen at a glance from the air. The barrens and burned areas can be determined and the attention of the ground cruisers can thus be devoted entirely to the profitable areas.

Sufficient progress has been made in the development of aerial photography to enable forest types to be clearly distinguished and preliminary cruising work, at least, may be done from the air with very much greater speed and with not less satisfactory results than from the ground.

#### Cost of Aerial Fire Patrol

As to costs, air transportation is a new development. During the war economy was no object and performance had to be achieved at any cost. The economical operation of aircraft was not studied to any extent before the Armistice. Since then very remarkable results have been achieved and the useful load per H.P. has been increased by at least 50 per cent, and in some cases, more than that. Constant research is being carried out to obtain greater efficiency from the new machines. Given a good load factor, men and material may be transferred at a speed of from sixty to eighty miles per hour, at a cost of about \$1.00 a ton per mile. An efficient fire patrol service can be maintained, given a suitable area, at about \$3.00 per square mile. These are conservative figures based on the experience of three years operations by the Air Board and by commercial companies.

As to safety, every aeroplane accident that occurs is featured in the newspapers. It has good news value. The useful everyday work of air transportation has none and very little space is given to it. This results in false impression as to the safety of air operations. The United States Air Mail covered in 1922 nearly two million miles and conveyed fifty million letters along the route between New York and San Francisco, with an efficiency of 94 per cent of trips completed, without a single fatal accident during the past year. On the European passenger and mail routes very similar conditions obtain. Services are carried out with clock work regularity. Machines cross the channel in weather when the steamers cannot leave port. Fog is the greatest difficulty and that is being overcome by the use of Directional Finding Wireless. The constantly growing traffic shows that the new form of transportation is gaining, slowly but surely, in the confidence of the public. This is natural. In fine weather no one who has travelled by air over this country would ever wish to travel by train, steamer or motor car. The smoothness, speed, the fascination of the constantly changing view, make travel by air most attractive. The only bug-bear is the noise and efforts are now being made to lessen this drawback and to silence aeroplane engines more effectively.

#### Makes the Careless Camper Think

There is one further point which is of importance, that is, the moral effect of an aerial patrol on settlers and those travelling in the bush. From every source we have repeatedly been told that the mere presence of aircraft flying over a district brings home daily in a direct way the risks of fire and makes such people doubly careful. Supervision from the air makes the careless camper or settler feel he is being watched continually and his guilty conscience pricks him to advantage. The actual fire risk is indubitably less in a patrolled area.

1922 was really the first season in which operations on a really commercial basis were undertaken. The work in 1920 and 1921 was largely experimental, but in 1922 enough had been learned to put the operations, both by commercial firms and by the Air Board, on a sound, practical basis. In Eastern Canada the services of the Laurentide Aerial Services, Ltd., Price Bros., and the Dayton Wright Company for the Spanish River Pulp and Paper Company have a record of useful work which is probably unequalled and certainly unsurpassed anywhere in the world. The approximate mileage flown by these companies is 70,000, the area covered by fire patrols approximately 25,000 square miles and the area surveyed from the air, by sketching or photography, about 20,000 square miles. This is a record of which the infant industry may well be proud. It shows clearly the success of practical operations of this kind and gives promise of great development in the future. The pioneer work of these firms is bringing its own reward and inquiries are being received every day from numerous sources regarding the possibilities of extending this work into new districts.

The Air Force has not been idle. It has carried out much work for the Provincial Governments of Ontario and Quebec on a repayment basis. For the former, daily fire patrols during the season of hazard over about 12,000 square miles south of the Ottawa River, Lake Nipissing and the French River, and for the Quebec Government, forest survey, mapping and type sketching from Roberval in the areas lying north and west of Lake St. John, and along the Natashquan and St. Margaret's Rivers on the north shore of the Gulf of St. Lawrence.

#### Work Carried Out By Air Force

From Vancouver Station 177 hours flying have been done for forestry work of different kinds, including transportation of parties investigating the white pine blister rust situation, forest fire patrols for the Provincial Government, the carriage of men and equipment to the scene of fires in inaccessible districts, reconnaissance of the damage done by fires and other similar work.

At High River, a total of 907 hours flying was carried out for the forestry branch. A great portion of this was the daily fire patrol system in the forest reserves on the eastern slopes of the Rocky Mountains. The extension of these patrols to the forest areas in the National Park is now under consideration.

In Manitoba 308 hours flying was carried out for the forest service from the main base at Victoria Beach on the south end of Lake Winnipeg and from sub-bases at Norway House at the north end and Le Pas on the Saskatchewan River.

Out of a total of 2,622 hours flying on all civil government operations, about 2,000 hours or 75 per cent was for forestry purposes. The remainder consisted of operations for aerial photography, the transportation of survey parties of reconnaissance of unknown and inaccessible districts prior to their survey, patrols for the prevention of drug smuggling and other similar transportation work.

The operations next in importance to the forestry work are those of the survey services. These also are of value to your Association, which is directly interested in having reliable maps of the districts in which they operate. The mapping of a country such as Canada is an immense task and if, by the use of aircraft, this task can be assisted and the work extended, the members of your Association will benefit together with the rest of the country. Most interesting work is now being undertaken by the survey services for the development of methods of aerial photography, which will enable pictures taken from the air to be used for mapping purposes. Important progress has already been made. It shows that areas of which the maps are at present incomplete and in some cases practically non-existent may be surveyed to much better purpose, with surer results and with a great saving of time by the assistance of aerial photography. It is not too much to say that in a country where the differences of elevation are not too great, given a minimum of ground control, a map may be made which will be accurate and complete, in much less time and at a saving in cost by the help of aircraft.

#### Mapping of Country by Aircraft

The importance to your Association of building up an aircraft industry should not be neglected. Canada is the chief source of the spruce used for aeroplane construction. Attempts are being made to produce all metal aircraft. These will probably be successful for certain types, but there is no doubt that wood will continue to be used in the construction of aircraft. During the war a flourishing little industry was created in Canada. Efforts are now being made to re-establish it and already a start has been made in this city to undertake the construction of aircraft. There is no reason why a flourishing industry should not result as time goes on. Those interested may rest assured that the Government will support an aircraft industry in Canada by every possible means in their power. Tenders are now under consideration for a number of new machines and firms bidding on Canadian made machines will certainly receive preference, provided they can guarantee satisfactory work.

The demand for plywood and veneers in the aircraft industry is considerable and will grow. It is interesting to note that since the Air Board commenced buying plywood in Canada, a very great improvement of the quality of the supplies available has been made. The Canadian manufacturers, by using our specifications, are now turning out an article equal to that produced anywhere in the world. There is a ready market for this material and I hope that the manufacturers will take advantage of it to the greatest possible extent.

Most people underestimate the value of a woodlot. A New York man who made a planting of white pine has been offered \$500 an acre for the timber on the stump. Under favorable conditions an acre of white pine will average a growth of one thousand feet a year, which is not bad when it is remembered the trees will grow on otherwise rather unprofitable land.

# PULPWOOD & PULP

## Interesting News Regarding the Industry

Twenty-three industries have been launched at Peterboro, Ont., during the past four years, among them being the Canadian Nashua Paper Co., manufacturers of gummed and coated papers, the Peterboro Paper Box Co., makers of paper boxes, and the Purdy Lumber Co.

In regard to pulpwood prospects in New Brunswick, a well-known operator says that little if any wood is ever cut or made in the winter season. Pulpwood in the province is cut and peeled in the peeling season, starting about May 1st and continuing for three or four months. It is, therefore, too early to say whether there will be an increased production this year or not. This will depend altogether on the demand, especially from the American mills. It is reported that large stocks are being held by some of the newsprint mills this season, and whether the active requisition expected will materialize or not, cannot be definitely predicted.

English newspaper interests are reported to be negotiating for the purchase of some of the Riordon Company timber tracts, according to a despatch from Boston. These interests, among whom are mentioned the London Times, would be prepared to operate a large mill here if the purchase was made, according to the report. Riordon bonds, at present in default of interest, would be provided for in the deal. It is understood the Riordon Company refused an option to the English interests on certain lands.

No decision has yet been reached on the Abitibi River power question. For some time past the Hollinger Mines Corporation has been trying to get a lease to develop power at Island Portage on the Abitibi River. Recently F. H. Anson, president of the Abitibi Company, and representatives of various companies met Premier Drury, Hon. Beniah Bowman and other members of the Cabinet to try and reach a solution of the question. It is understood that the latest prior rights of other companies on the Abitibi need to be smoothed out by mutual arrangement.

The first eighty-ton unit of the new Backus Brooks Company's pulp mill started operations in Kenora, Ont., recently. One side of the plant was started and is running nicely. This is now being tried out, and in the meantime the other side is being rapidly connected up. The plant is so designed that either half can be run independently of the other, so that in case of accidents or wear when repairs are required, production may be continuous. It is expected that in a few days both sides will be in full operation. This is the beginning of production which it is confidently stated will ultimately be a thousand tons per day. This, of course, will take time to develop.

Bird & Son, whose mills are at Pont Rouge, Que., and head office in Hamilton, turn out about 35 tons daily of prepared felt roofing. They have had a very successful year in spite of reductions made in the price of the company's product. Orders on hand are now ahead of the corresponding period of last year. Net profits after depreciation and taxes were taken care of were \$82,479. Dividends on the new issue of 7 per cent. cumulative preferred stock for the last six months of the year were \$14,000.

The statement of assets and liabilities shows capital assets valued at \$799,875. Against this amount there is a depreciation reserve amounting to \$208,138. Current assets at \$454,796 compare with current liabilities amounting to \$120,248. Inventories are carried at \$276,945, and bills receivable at \$150,189. Accounts payable total \$72,580. A further item not included in the accounts payable, total represents bank loans amounting to \$30,000.

The application of the Minnesota & Ontario Power Co., of International Falls, Minn., for an order of the Board of Railway Commissioners for Canada making reduced rates on newsprint shipped by the Fort Frances Pulp & Paper Co., of Fort Frances, Ont., to western Canada points, effective from December 1st 1921 instead of January 9th 1922, has been granted. The Fort Frances Company, at the head of which is E. W. Backus, is under the same management as the Minnesota & Ontario Power Co. The Northern Pacific and other railways interested will, under the decision just rendered, have to refund the difference in rates on shipments made by the Fort Frances Company between December 1921 and January 9th 1922.

A. M. Irvine, of Montreal, chairman of the Executive Committee, announces the resignation of J. E. A. Dubuc from the Committee of Management and the Board of the Bay Sulphite Co., of Port Alfred, Que. It is understood that Mr. Dubuc has also withdrawn from the Committee of Management of the Saguenay Pulp & Power Co. Mr. Dubuc's resignation, it is presumed, is the result of ill-health, and it is believed that he will shortly leave for an extended holiday in France. The necessity of his withdrawal from active participation in the business of the Saguenay Pulp & Power Co. and other interests in the province of Quebec, will be largely regretted. Mr. Dubuc is chiefly identified with the Chicoutimi Pulp Co., of which he is the founder, and with which he has been closely associated for twenty-two years. Its development to its present position as the largest producer of ground wood pulp in the world is largely the result of his energy and foresight.

The hearing of witnesses in connection with the assessment dispute between the E. B. Eddy Co., Limited, and the city of Hull, took place recently before three experts. Final judgment or preparation of the report of the experts was delayed and when completed will be presented to the judge of the Circuit Court. The matter in dispute was taken some time ago by the Eddy Company, who appealed against the assessment levied of \$7,300,000 on its property and plant which was made by the city assessor.

Recently another group of Riordon Company timber limits were sold, which have brought the total sales during the past year or so up to 15,000 square miles. The company has had a return of about \$2,500,000 from the disposition of all of these limits. 500 miles of hardwood limits on the Nation River, Que., were, it is reported, sold to the Singer Sewing Machine Co. at \$500,000. The Singer Company has a plant at St. Johns, Que., where considerable hardwood is consumed. It is understood that the waterpower rights were not disposed of.

A number of timber berths were recently sold at the Crown Land Office in Fredericton, N.B. One timber license for two square miles on the eastern side of the north west Miramichi River near the mouth of the Little Southwest Miramichi River, went to James Walsh at an upset price of \$20 a square mile. Another timber license for two square miles west of Pleasant Ridge Settlement, parish of Rogerville, county of Northumberland, was sold to W. F. Comeau at an upset price of \$20 a square mile. One hundred acres at Glenlivet, Restigouche County, applied for by John Wesley McDonald, were sold to Hugh A. Carr at \$2 an acre. This was the only sale in which there was competition. Two hundred and thirty acres, Flume Ridge, Charlotte County, were sold to the applicant, Thomas Campbell at the upset price of \$6 an acre.

The steamer "Lord Strathcona" discharging Canadian timber at the dock at Cardiff, Wales. It will be noticed that several cranes are used simultaneously, affording a quick unloading of the large cargo.

MEDIUM SURFACE PLANER. Endless bed, double surface preferred. Must be very cheap and in good working order. What have you? Marathon Lumber Co., Bigwood, Ont. 6

### Portable Sawmill Wanted to do Customs Work

The undersigned have two or three full seasons work for a good substantial portable cutting railway ties and lath. For full particulars apply to, Box 156, Canada Lumberman, Toronto. 6

## Machinery For Sale

### Sawmill for Sale

Cheap at La Reine, Abitibi. Apply to L. N. Huart, Levis, P. Q. 6

### For Sale

Linn Lumber and Logging Tractor. Apply Box No. 60, Canada Lumberman, Toronto. 24 T.f.

### For Quick Disposal

One slide valve engine, 100 H.P. in good repair. Will sell cheap for quick sale. Box 125, Canada Lumberman, Toronto. 4-7

### For Sale

One heavy duty lumber carriage 40" open with or without steam feed. A snap if taken at once. Box 126, Canada Lumberman, Toronto. 4-7

### For Sale

McGregor Gourlay O.Y., 15 x 6 Planer and Matcher complete. Now running. The Peterborough Lumber Co. Ltd., Peterborough, Ont. 4-7

### For Sale

Two Steam Engines. About 100 H.P. each. Both in fine running condition. Very low price for quick sale. Address, The Maitland Lumber Co. Ltd., Liverpool, N. S. 5-8

### For Sale

Having installed a large Scaper, we are offering our 30" Whitney Scraper complete with knife grinder and two blocks, in first class condition. Apply Hay & Co. Ltd., Woodstock, Ont. 3-6

## For Sale

Small, stationary Circular Saw Mill with good power. Capable of cutting 15,000 ft. per day. Will sacrifice for cash. Apply Box 145, Canada Lumberman, Toronto. 5-6

## For Sale

One used S.A. Woods Planer and Matcher, 15" x 9", No. 33 in very good working order, at a very attractive price. Also one Automatic Circular Saw Grinder. O. Chalifour, Inc., Quebec, P.Q. 4-7

## For Sale

1 Corliss Engine 13" x 30".  
1 Stationary Boiler 56" x 12'.  
2 power driven water pumps.  
1 vacuum feed water heater.  
A complete equipment. Will sell reasonable. Apply to Crystal Beach Planing Mills, Crystal Beach, Ont. 5-6

### Corliss Engine for Sale

An E. Leonard & Sons 18" x 36" horizontal 175 h.p. Corliss Steam Engine; heavy duty girder frame and outbearing; 12" x 24" band wheel and ball governor; in first class condition. Will sell at a bargain. The American Pad & Textile Co., Chatham, Ont. 6-9

## For Sale

1—7" Steam Feed  
1—Medium weight Carriage 40" opening, Double acting set works.  
1—Balance Wheel, 8 ft. dia. 4" rim 4½" bore, approximate weight 20 hundred.  
50 ft. Smoke Stack—24 in. dia.  
1—Champion Steam Engine 8 x 10.  
L. Robertson, Ardbeg, P. O., Deer Lake, Ont. 5-8

## For Sale

1—No. 202 Fay & Egan Edging and Ripping Saw, new, with two saws.  
1—No. 112 Fay & Egan Hardwood Flooring Machine.  
1—Holmes End Matcher.  
1—Wheelock Engine, 20 x 46 Left Hand.  
These machines are being offered at a greatly reduced price, and are all in first class condition. Gilpin Bros., Warton, Ont. 6

## Notice To Sawmill Owners

We are disposing of the machinery, etc., in our sawmills at Waubushene, Ontario, and would be glad to have enquiries for any kind of sawmill machinery. At present time we have unsold:

Band-Saw Mills and Saws.  
Circular Saw Frames and Saws.  
Gang-Saw Machines and Saws.  
Twin Circular Machines and Saws.  
Carriages with and without Steam Set-works for the above Band-Saws and Circulars.  
Steam Feeds for the above Carriages.  
Steam Log-Loaders and Steam Niggers.  
Trimmers and Slash-Tables.  
Lath Mills.  
One 35 ft. Steel Refuse Burner.  
Automatic Circular Grinders.  
Automatic Gang-Saw Grinders.  
Automatic Band-Saw Grinders.  
Log Haul-ups.  
Engines, Boilers, Shafting, Pulleys, Belting, Lumber Trucks.  
Everything that goes to make up a large sawmill.

This machinery, for the greater part, is of William Hamilton Manufacturing Company make, and is in first class condition and the prices are right.

Enquire from

The Georgian Bay Lumber Co., Ltd.  
3-10 Waubushene, Ontario.

**For Sale**

1 Waterous Pony Bond \$635.00. 1 E. Long 36" right hand Edger with 3 collars, \$365.00. All in good condition. Box 136, Canada Lumberman, Toronto. 5-10

**Wickes Gang**

GANG: No. 12 Wickes Gang, 40" sash, 15" stroke, steam boiler rolls, front and back in two sections, feed and oscillation combined, 1908 model, and has been in use for five years. We furnish with this gang 11 rolls for cants and stock, one filing machine, and 4 sets of saws.

THE PEMBROKE LUMBER CO.,  
1 T.f. Pembroke, Ont.

**Sawmill Machinery For Sale**

I am dismantling one of the largest mills in Nova Scotia, and offer the machinery at junk values. Complete list furnished on request.

Here are a few items picked at random, to give you an idea of the money you can save:

42" Stock Gang—Stearns Mfg Co.,  
Erie, Pa. ....\$1000.00

24" Stroke Double Cylinder A frame  
Sawmill engine Geo. Waring Mfr. \$1000.00

1 Left hand Band Saw Carriage 25'  
Overall with set works, dogs, wire rope, feed gear driven by a Pawling & Harnishfecher twin engine feed, 10 x 12 cylinder—carriage equipped for setters to ride .....\$1500.00

1 Tandem Band Sawmill composed of a right and left hand Band Saw with wheel 72" x 8" .....\$ 400.00

Haulup, Steam Kickers, Live Rollers, Conveyors, Shafting, Hangers, Boxes, etc., etc.

RALPH P. BELL,  
Timberlands & Pulpwood,  
4-7 P.O. Box 1081, Halifax, Nova Scotia.

**Situations Wanted**

POSITION WANTED by a first class Band Saw filer, 20 years experience. No job too large. Box 15, Canada Lumberman, Toronto. 5-10

MAN WITH MILL EXPERIENCE would like position to hammer and file large circular saws in sawmill for coming season. Box 106, Canada Lumberman, Toronto. 3-6

EXPERIENCED LUMBER SALESMAN, good connections Ontario and New York State, open for engagement end of March. Box 167, Canada Lumberman, Toronto. 6-7

RETIRED LUMBERMAN, well known by retailers here, would like lumber mill's agency for Montreal and Province. Best references and certain capital. Apply Box 160, Canada Lumberman, Toronto. 6-7

BOOKKEEPER AND OFFICE MAN, 15 years experience in wholesale and retail lumber offices, open for engagement in May (sooner if necessary) Box 168, Canada Lumberman, Toronto. 6-7

POSITION WANTED—as Band Saw Filer in real good Band Mill, any size. Very best of references. Single or Double cut. 22 years experience. Box 115, Canada Lumberman, Toronto. 3-6

OFFICE MAN, twenty years timber trade experience open for engagement. Age 39, married. Good references. Can go anywhere. Apply Box 137, Canada Lumberman, Toronto. 5-6

CASHIER PAYMASTER, married man, twenty years lumber business experience all branches, open for engagement. Ontario or west preferred. Salary reasonable. Write Box 138, Canada Lumberman, Toronto. 5-6

Young Man, 28, wishes to learn the lumber business preferably the selling end. Has had some selling and several years experience in accounting and office work, any place in Canada. Box No. 71, Canada Lumberman, Toronto. 1-6

WANTED—for coming season—position as sawyer on left hand rig, either bands or circulars. Fifteen years experience on fast rigs. Best of references. Write or wire Peter Dennis Leggers, Gen. Del., Winnipeg, Man. 5-6

EXPERIENCED LUMBER SALESMAN, speaking both languages desires to represent wholesale lumber company in Montreal and Quebec province on commission basis. Address Geo. H. Thibault, Room 211, 180 St. James Street, Montreal, Que. 5-6

WANTED—Position as woods superintendent. Twenty years experience in logging and river driving logs or pulpwood. Can handle the business thoroughly, either jobbers or company camps. Best of references, both languages, and married. Box 146, Canada Lumberman, Toronto. 5-8

POSITION WANTED as office manager or yard manager by advertiser. Eighteen years lumber trade experience. Can handle work and staff. Married, age 38 years, British. Reasonable salary. Any location. Write first instance Box 139, Canada Lumberman, Toronto. 5-6

POSITION WANTED—By young married man, with progressive concern. Eight years' experience as manager large retail yard, also wholesale selling experience in both Eastern and Coast materials. Would prefer Western Ontario or further west. Apply Box 172, Canada Lumberman, Toronto. 6

YOUNG MAN, 24, wishes progressive position with lumber firm. 3½ years experience in lumber manufacturers' office and yard. Experience shipping cars and cargoes. Payrolls and general office routine. Can operate typewriter. Prefer part outdoor work. Go anywhere. Box 169, Canada Lumberman, Toronto. 6-7

WANTED—Position as Superintendent, or manager of lumber company. Eighteen years practical experience, which time have been with but two concerns, holding these positions with success. Would entertain subordinate position with future and prove ability. Forty years old and married. Unquestionable references as to ability and integrity. Box 80, Canada Lumberman, Toronto. 4-7

PERMANENT, PROGRESSIVE POSITION desired May 1st or after. Good, all-round office man. Age 39, married. Twenty years lumber trade experience. Can work without supervision and handle correspondence and all duties. Have experience in Hardwood and Softwoods. Initial salary not main point provided reasonable prospects. The limit contains mainly white pine, there is also a large quantity of spruce, cedar, birch and hemlock. A list of supplies on hand and equipment may be seen at the depot. A complete logging and driving outfit consisting of sleighs, boats, two gasoline launches, thirty-four horses, etc. Tenders will be received by Fraser & Co., 74 Nepean St., Ottawa, up to the 10th of May 1923. Further particulars may be had on application. 5-9

**Miscellaneous****D. FLORENCE & SONS**

Bethune St., Peterborough, Ont.

Dealers in Scrap Iron, Metals, Second-Hand Machinery, Pipes, etc. 2-24

FOR SALE—Used Belting, Rails, Blocks and Pulleys. Send us your Scrap Iron and Metal etc. Highest market price paid. A. Low and Company, 264 Simcoe St., Peterborough, Ontario. 1-24

**Motor Boat for Sale**

One 26 ft. flat bottom driver's boat, equipped with Sterling 12-15 h.p. Engine, complete with power winch, in first class shape. Engine only in use three months. For particulars, apply to Fassett Lumber Co., Limited, Fassett, P.Q. 6-7

**Railroad Flat Cars for Sale**

3 standard steel flat cars M. C. B. with U. S. safety appliances, built by Can. Car & Foundry Co. New in 1916. Had very little use. Price \$1,000. each (cost \$2,800. each). F. L. Richardson, 178 High Park Ave., Toronto. 6

**Pulpwood Limit**

We have for sale licenses on two townships of about 72 square miles between Parry Sound and Sudbury. The timber on these townships is mostly poplar pulpwood and is exportable to the United States. Also there is a large quantity of other timber, spruce and balsam pulpwood, jack pine ties, elm, oak, etc.

The longest haul to the railroad would be about six miles and the average around three miles.

For further particulars apply to

Mulholland and Company  
23 Jordan Street, Toronto, Ont. 6-9

**The Canadian Land and Immigration Company of Haliburton, Limited**

This Company owns in fee simple over 300,000 acres of timber lands in Central Ontario. These lands are well timbered with Spruce, Balsam, Hemlock, Basswood, Birch, Maple, Ash and Cedar and considerable Pine.

The timber on this property will be sold in blocks of from 10,000 to 50,000 acres with a reasonable time to take same off. Or the land and timber will be sold together.

There are two Railroads running into the property, one into the Southwest corner and the other into the Southeast corner.

This territory is so well interspersed with lakes and rivers that the cost of getting out the timber is comparatively small.

As the property is held in fee simple there are no Government dues or restrictions as to manufacture, therefore, anything cut on the property can be exported in its raw state.

Maps and plans and further particulars will be given on application to the undersigned.

W. H. LOCKHART GORDON,  
Managing Director,  
79 Adelaide Street East,  
Toronto. 6-9

# Review of Current Trade Conditions

## Montreal Market Continues on Firm Basis

From the wholesalers' point, the Montreal market is in a satisfactory condition. A large volume of business is passing with prices tending upwards. Some firms have a number of orders which they are unable to fill, partly because of the difficulty of securing stock and partly on account of the shortage of cars. The situation is regarded to the latter is serious, the more so as many orders are for American account. The railways are not willing to allow Canadian cars to cross the border owing to the delay which occurs in their return. While the companies are, no doubt, justified in their policy, it considerably handicaps the lumber trade. American firms are placing orders very freely, business coming from points which do not usually buy in the Montreal market.

Manufacturers are receiving a large number of inquiries for the new cut. One company with a very extensive production states that the inquiries are surprising, ranging from carloads to the entire cut. Another manufacturer, who recently acquired a limit, reports that he has received numerous letters as to the cut of hardwoods and softwoods. These inquiries may be regarded as evidence of confidence in the immediate future of the market, both as to the volume of business and prices.

The hardwood market is very firm with some of the characteristics of the spruce section—activity, advancing prices and inability to obtain all the stock required.

Lath is on a stronger basis, and a considerable amount of business is being done.

Trade in B. C. forest products is moderate, but it is restricted not only by the high prices but by the difficulty of obtaining prompt shipment.

Prospects for the building season are favorable. Some very extensive enterprises connected with the lumber and pulp and paper industries will be carried out this year. These include the St. John Lake dam and other work for the Quebec Development Company, in which Price Bros., are interested, and the damming of the Chicoutimi and Sable Rivers, which will supply water to Price Bros. and the Chicoutimi Pulp & Paper Company. In Montreal some huge office buildings are to be erected, while there is also a substantial programme of construction in other directions.

There is an increased demand for pulpwood, with prices strengthening. During January Canada exported 133,328 cords, of a value of \$1,195,886, compared with 66,094 cords, valued at \$696,943 in the corresponding month last year. For the ten months of the fiscal year the exports were 883,139 cords, valued at \$8,906,091, as against 630,540 cords and \$7,926,536 in the corresponding period of 1921-22.

## Market in Ontario is Strong and Active

Conditions in the lumber line remain encouraging, and in spite of the handicap in shipping stock to the United States caused by embargoes at many points, trade is, on the whole, very satisfactory. Several large sales of white pine cuts for the coming season have been made during the past few days at an advance all the from \$5 to \$7 on what was paid for similar stock last year. Hemlock prices are also commanding considerably more than they did a year ago, and while the increase of \$6 and \$7 on mill run may seem a little high in some cases, manufacturers point out that it will cost them a deal more to produce their stock this year. Wages in the bush were considerably above those of the winter of 1921-2, and at the beginning of the season men were inefficient and restless. Then again, it is expected that there will be an advance in the wages of ordinary mill labor this spring of, perhaps, 10 per cent, which will also run up the cost of production.

There is a great scarcity at the present time of 2 x 4, 2 x 8, 2 x 10, and 2 x 12 dimension, 10 and 16 feet lengths, in jack pine, spruce and hemlock; 2 x 6's are quite plentiful with very little demand. Wide white pine culls, 10 and 12 in. are also rare. In the meantime all the mills are making preparation for an early start, and if the spring break-up continues as gradual and satisfactory as was the case during the first few weeks in March, all plants should have an auspicious opening.

There is a great shortage of lath at the present time and the American demand is keen. The call is for spruce lath from the east and there has been a jump in values all along the line. It is expected that the market this spring will be particularly active in view of spring building indications and the favorable trade outlook.

The chief difficulty with wholesale lumbermen at the present time is securing stock. It is no trouble to dispose of material at a satisfactory figure; the problem is where to lay hands upon it.

It is believed that the lumber business for the first few months of this year will be exceptionally active and that the cut for 1923 will break all records of the last three or four years. Everything betokens an expansion of production and confidence in the future. Supply and sawmill equipment firms are very busy, and several mills, which have been burned, are being rebuilt, all of which is an unmistakable omen of returning prosperity.

The industrial situation in Canada is not yet active but it is improving steadily and the domestic market in hardwoods which for a long period has been limited and listless, is expected to take on new activities during the coming few weeks. In maple, birch, elm and basswood, while there is no frenzied buying, the general demand is good and the advanced prices in many instances are being readily paid. Owners of small stocks are holding out for more money and say they will get it too.

In the meantime the outlook for the future is enlivening and everything betokens a large car business in all kinds of wood. The one danger is that of a runaway market before the new cut comes on the arena. It is predicted by some wholesalers that considerable material will be sold green from the saw, so pronounced will be the scarcity in certain lines of lumber.

One leading operator stated the other day that if values went too high, the whole market would be upset very suddenly as people were nervous now about large or new undertakings. A disturbing factor was apt to be greatly magnified, and the results would be detrimental to all concerned. Stability and confidence were requisites that should characterize production, sales and distribution, and any unpropitious influence affecting the situation would only tend to complicate matters and mar what otherwise is likely to be an excellent year in the lumber business.

## Ottawa Reports Good Movement of Stocks

An improvement in the Ottawa lumber market, especially in regard to the movement of stocks for the domestic trade which were bought and paid for at the end of last year or early in 1923, marked the Ottawa lumber market, during the early period of March.

Price advances ranging from one to twenty-five dollars per M feet took place in some lines, the largest increase being in good pine shorts, one and one-quarter inch and one and one-half inch, and two inch stock. The increase was attributed to the demand for these stocks as compared with the existing supplies.

Several of the Ottawa valley companies report that, during the last few weeks, orders had come through notifying them to ship stocks which were bought and paid for late last year or early this year. In addition there was also several good orders received for stocks other than those which had been previously ordered.

The demand as reflected by orders called for a general run of stocks from the best to the lowest grades, which was the kind of a market that the Ottawa lumber dealers have been awaiting. The view taken that such a demand confirmed previous operations that the spring and summer is going to be a good business period for the lumbermen.

The demand from the American yards did not show much fluctuation as compared with the early part of the month. The embargoes on entry points were reported to be as stiff, if not stiffer, than they had been. In addition to the embargoes, severe winter weather and heavy snow falls in the eastern states crippled shipping activities, and the view was held at Ottawa that prospects of good rail shipping to the American yards would not materialize until such time as the motive power equipment of the railways improved, and the snow congested tracks had been thawed or melted out.

The heavy snow in February, Ottawa lumbermen believed, would eventually result in a considerable reduction of the log output in the Eastern Townships. These snow falls, however, were not as heavy in the Ottawa valley district and reports were that the weather for log making and hauling had been the best for many years.

The lumbermen look forward to a particularly large cut, and feel that given an even break, with the waters of the Ottawa river behaving anything like normal, that a large percentage of the logs will get to the mills and that the 1923 sawmill cut will be a large one.

The labor situation in the woods camps improved considerably,

View of Mills in Sarnia

## ***“On Time” Delivery***

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

***“Rush Orders Rushed”***

# **Cleveland-Sarnia Sawmills Co., Limited**

**SARNIA, ONTARIO**

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARBE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

several companies reporting that they had now all the men they wanted, until the spring gangs were sent in. Following the tradition of years, lumbermen expect, this year that the members of the winter gang will come out of the bush to the cities on March 22, which the woodsmen claim is the day on which spring commences. Already gangs for the spring work are being collected, and no shortage of labor for the drive or the later woods operations is feared.

Conditions with the woodworking plants and factories did not show a great deal of change. Several plants reported being fairly busy, being chiefly occupied in manufacturing stock or dressing rough lumber in transit.

### New Work Shows Exceptional Volume

Spring will soon be here, and, in more pressing form than ever, the question of taking long delayed construction projects in hand. For municipalities with public utility extensions to instal, for business houses with office and manufacturing expansions in contemplation, and perhaps most of all for private apartment house dwellers and rent payers, who have long dreamed of a certain little house of their own—for all of these the problem is—Build now or await further possible declines in costs? In reply to which a majority of considerations seem to suggest an affirmative answer.

It is apparent that the great drop in construction costs is over and those who wish to build may do so in 1923 without fear of loss through the shrinkage of existing values incidental to rapid price deflation. Labor has settled down to a sound basis of production, and the flow of money into building channels is rapidly increasing. Many of the big projects underway have been undertaken only after the investor has come to realize that the major conditions in the building field are now favorable. There is much wisdom in the advice being given at the present juncture by architects to their prospective clients—"Build now and avoid the rush."

Pronounced activity in the coming season is forecasted by the February figures of contemplated new work reported by MacLean Building Reports, Limited. The value of proposed work reported for the first time in February was \$41,231,400 compared with \$36,714,600 in January. These figures serve as a basis for accurately judging the value of contracts to be let a few months hence.

During February, construction contracts actually awarded in Canada amounted to \$13,311,800 compared with \$10,718,300 in February, 1922. Residential building accounted for 21.4% of the February total and amounted to \$2,854,000. Business building amounted to \$6,368,800 or 47.9%; industrial building, \$2,997,500 or 22.5%; public works and utilities, \$1,096,500 or 8.2%.

### Building Starts Off Well This Year

Building permits issued in Toronto for the first two months of 1923 total over \$3,500,000. The January and February totals of 1922, itself the record year of Toronto's history, have both been surpassed and indications are that a new building record will be established this year.

With the close of its books recently the department recorded a total of \$2,127,725 of building construction authorized during February. This is an increase of \$419,725 over the \$1,708,000 mark of February, 1922. The total for January of this year was \$1,518,919, making the total for the two months \$3,646,644.

### Timber and Water Resources of Quebec

A comprehensive treatise has been prepared by R. O. Sweezy, technical forestry engineer, on the subject "Timber Lands and Water Powers of Quebec in Relation to the Pulp and Paper Industry." Mr. Sweezy estimates the spruce, balsam and jack pine content of Quebec province at 280,000,000 cords, divided into 185,000,000 cords in the St. Lawrence Valley; 75,000,000 on the James Bay slope; and 20,000,000 in Ungava, Labrador, and Hudson's Bay. He also estimates pine at 2 3/4 billion feet; hard woods 5 billion feet; and poplar 35,000,000 cords. The pine, hard woods and poplar are all contained in the St. Lawrence and James Bay areas. After dealing with timber contents and areas, Mr. Sweezy turns to the pulp and paper industry of the province, in which connection he states that it is safe to say that the annual growth of the forests—containing 280,000,000 cords of standing pulpwood, would average 2 to 3 per cent, being approximately 5 1/2 million cords a year. The amount of pulpwood exported annually from Quebec forests is 700,000 cords. In addition there is exported to Ontario and New Brunswick from Quebec Crown forests about 300,000 cords a year, and Quebec pulp and paper mills consume 1,350,000 cords a year on a daily production of 500 tons of sulphate pulp; 800 of ground wood; 425 kraft pulp and paper; 1,300 news print paper—a total of saleable products of 3,025 tons. "Thus,"

he finds, "the province's forest supply annually 2,400,000 cords of pulpwood. Large as this quantity is, it represents less than half of what the forests can supply under scientific management. As the lumber industry consumes a large quantity of spruce and balsam there is a corresponding reduction of land available for pulp and paper. Hence it is doubtful if the present output of the latter can safely be increased to much more than 6,000 tons a day. It might be possible, however, to considerably increase the allowed annual increment of only 2 per cent. In fact, there is no doubt but that 3 per cent at least is possible but the big disturbing factors are of course improper operation and forest fires." Mr. Sweezy assumes, therefore, that there is no doubt that the industry in the provinces is bound to expand, and thus turns to the logical places where this expansion will take place. He points to the Quinze watershed, the Gatineau, the Saguenay, and the Manicouagan. He also assumes that if further expansion takes place in sulphite pulp production "it should be on the Gaspé peninsula. Shawinigan Power conditions offer facilities for further expansion at Three Rivers, but as some of the St. Maurice forests are already over-operated, any new mills at that point will have to look to the Lower St. Lawrence.

### An Important Ruling on Demurrage

A judgment of importance to shippers of freight by rail, as well as to the Canadian railways, was handed down by Mr. Justice Audette, in the Exchequer Court in the case of the King vs. Frank A. Gillis Company, of Halifax, N. S., being the first given in Canada determining the conditions under which a railway is entitled to charge demurrage. Mr. Justice Audette, in giving judgment in favor of the plaintiffs, finds that a railway is entitled to charge demurrage after a car has been available for unloading by the consignees, from a proper and reasonable team track, for a period of 48 hours. "It is not necessary thereafter for a railway company to keep the car on a team track to enable it to claim demurrage, and the consignee has no right to ask the railway company to keep his car indefinitely upon a team track, thus paralyzing the business of the railway company."

### Appeal of Lumber Company Rejected

Judgment was confirmed recently in Montreal by the Court of Appeal in the case of La Campagnie a Bois Bedard and the Eagle Lumber Company, Limited, Montreal.

The appellant sold to the respondent 2,500,000 feet of wood at \$41 per 1,000 feet, to be delivered in cars. It was agreed that payment should be made by respondent within thirty days of delivery, with a discount of two per cent. In the month of December, 1920, there was a large quantity of wood undelivered in a corner of the appellant's yard. It was piled up and neither checked nor measured. During that month appellant made a rough estimate of the quantity of wood, placing the figures at 452,910 feet. An employee of the respondent also made an estimate and it seemed that these estimates were not to be considered binding, as the lumber was to be measured when loaded in cars for shipment. Nevertheless, a bill pro forma for \$17,000 was accepted and paid by the respondent, who placed its name on all the piles of lumber.

After several shipments, appellant considered the first estimate was not exact, and submitted there was more wood in its yard than had at first been thought. Appellant said the quantity of lumber was again estimated, and then it was found there were, in the name of the respondent 200,000 feet of lumber more than had been first estimated.

Things remained in that state until June, 1921, when the appellant's saw mill and lumber in the yard were destroyed by fire. Thereupon, appellant claimed from respondent the sum of \$7,977.80, being the balance of the price of sale due if respondent was held to pay according to the estimate made by appellant. The claim was dismissed by the trial judge.

### The Largest Tree in France

In honor of its height and girth the spruce in the foreground in the cut on page 89 has been named by the French Forest officers "Le President" says A. de H. Smith, of Edmonton, Alta.

It stands in the forest of Jura, close to the Swiss frontier, and is a popular rendezvous for the citizens of the Republic, who are wont to gather there for picnics and what not, and having viewed the monarch of the mountains, shrug their shoulders and exclaim "C'est magnifique n'est pas?"

The Canadian Forestry Corps would very much like to have turned it into 3x6's for trench roads—had they done so it is very possible that Canada and France would still be at war.

## It Meets Every Northern Logging Need

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in winter logging work. Its flexible tracks enable it to climb over obstructions, cross small gullies, and operate uninterruptedly both on and off the road. It is easy to control, turns in its own length and provides the correct speed for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. We are equipped to give immediate service on spare parts. Write today for descriptive catalog:

## EDGINGS

The Sawn Lumber Co. Inc., Quebec, Que., has recently been granted a charter.

The Montreal Retail Lumbermen's Association has opened an office at 195 St. Catherine St. East.

A. L. Blythe, of Detroit, representing Pacific Lumber Co., of Chicago, was in Toronto recently calling upon the trade.

The lumber mills of Maurice Bertrand, Ste. Cecile de Masham, Que., was recently destroyed by fire with a loss of about \$50,000 to the owner.

George L. Gordon, of Nipigon, Ont., considers the prospects for pulpwood cutting are very bright in that section. He has taken out about 3,000 cords of pulpwood this season.

Terry, Nicholson, Cates, Limited, of Toronto, wholesale lumber dealers, have purchased the entire 1923 cut, consisting of approximately 15,000,000 feet, from Letherby & Chew, Limited, Midland, Ont.

Hon. George Gordon, of North Bay, and Mrs. Gordon are spending the month of March at Sea Breeze, Florida. A. B. Gordon, of Toronto and Mrs. Gordon are also enjoying a month's holiday in the Sunny South.

A sawmill belonging to J. B. Grant, at Temple, York County, N. B., was recently destroyed by fire. The loss is estimated at \$5,000 and there was no insurance. Mr. Grant had been operating the mill for the last fifteen years.

W. H. Cote, Lumber Co., Limited, Montreal, is a new firm with a federal charter to manufacture and market lumber and pulpwood. Capital \$50,000. Two of the incorporators are W. H. Cote of Montreal and H. Blouin of Outremont.

A charter has been granted to the Trafalgar Lumber Limited, with a capital stock of \$100,000 and head office in Oakville, to purchase, sell and deal in timber limits, water lots, water powers, etc., and to manufacture lumber, logs, pulpwood, etc.

Jenings & Bailey, of Baptiste, Ont., have installed a planer, matcher, power feed rip saw, shingle machine and lath machine in connection with their sawmill and now have the additional equipment in operation. The company expect a busy season.

Port McNeill Timber Co., Ltd., Toronto was recently granted a federal charter to manufacture and market lumber, pulpwood and other wood products. Capital stock to be 1,000 shares without par value, provided the company shall do business with a \$5,000 capital.

A report from points in the province of New Brunswick indicate that spruce logs for spring delivery are selling at \$16 a thousand, and that there is every indication of a marked improvement for pulpwood. This time last year spruce logs were bringing \$15 a thousand.

Among the lumber firms in Toronto who will, in the course of a few weeks remove their offices to the handsome new, 11-storey Federal Building, corner Richmond & Sheppard Sts., are,—Canadian General Lumber Co.; R. G. Chesbro; Leak & Company; W. Y. Lloyd; Larkin Lumber Co.; A. E. Gordon Lumber Co., and others.

J. B. Beveridge, who for several years has been managing-director of the Dryden Paper Co., Dryden, Ont., has resigned, and F. A. Sabbaton, of the Laurentide Co. Grand Mere, Que., has been appointed vice-president and managing-director. George Chahoon, president of the Laurentide Co. has been elected to the directorate.

At the annual convention of the Grand Chapter of Royal Arch Masons, which was held in Toronto recently, M. Ex. Comp. R. H. Spencer, of Trenton, was re-elected Grand Z. for another year. He has filled this exalted office with diligence and ability and has been identified with Sheppard & Gill Lumber Co., of Trenton, Ont., for many years.

Russel Bros., of Fort Frances, Ont., who are well-known manufacturers of warping tugs, have put on the market a smaller model of these boats. The latter have immense power combined with light weight and shallow draught, and are particularly useful in mill ponds for rafting and raising booms. The Alligator type of boat has been in use in the large sizes for many years and has proved most successful.

Fort William will be the site of the new paper mill which will be erected by the Great Lakes Pulp & Paper Co. The matters of the location and obtaining Hydro-electric power on a satisfactory basis have been under consideration for some time. Port Arthur, the sister city of Fort William, was also after the industry but Fort William was successful.

The many friends of Col. A. R. Kenny, of the Big Bear Lumber Co., Toronto, will sympathize with him in the loss of his mother, Mrs. T. H. Kenny, who passed away recently in Ottawa. Besides her husband she leaves a family of several sons and daughters. Mrs. Kenny had been ailing for about two months and was in her 68th year.

Given good weather conditions, the month of March should bring to Eastern Canada the largest maple sugar production in her history, as during the past much new equipment has been purchased by Eastern Townships and Southern Ontario farmers. The maple bushes of Ontario and Quebec are worth over ten million dollars a year to their owners.

Edward Norton, of Toronto, and Harry Hazen, of Tillsonburg, have joined the sales staff of the Adams River Lumber Co., of Chase, B. C., of which J. T. Todd, Toronto, is eastern manager, and have entered upon their new duties. Mr. Norton is looking after the Windsor district and Mr. Hazen is supervising the London and St. Thomas section and points East.

From Pembroke comes word that the cut in that district is about the same as last year. The volume of trade was greater and prices and profits better. Stocks at the present time are lower than a year ago and a fair trade was done throughout the whole season with the United States. The cost of production will be higher this season and the prospects are reported as good.

R. E. Coates, of Dutton, Ont., in a recent letter to the "Canada Lumberman," says that in Elgin County the amount of hardwood taken out for 1923 will be very nearly up to normal and several times larger than what was cut during last season. There is a feeling that prices will advance as far as tight credits will permit. The principal kinds of wood taken out are elm, maple, white ash, oak and basswood.

A charter has been granted to the Larkin Lumber Co., Limited, with headquarters in Toronto and a capital stock of \$100,000. The enlarged concern will take over the business now carried on by H. W. Larkin, and it is understood that its activities will be considerably increased. The Larkin Lumber Co., Limited is empowered to deal in all branches in the forest products line, and is a concern which has made rapid progress since its inception in 1919.

The Canadian Western Lumber Co., of Fraser Mills, B. C., reports sales of lumber during the month of December amounting to 8,018,898 feet as compared with 4,596,401 feet for the same month in 1921, while the price realized was \$178,925 compared with \$118,053 the previous year. The aggregate lumber sold for the twelve months of 1922 amounted to 116,869,587 feet and the price realized \$2,803,943 as compared with 85,679,969 feet sold in 1921, and the price realized \$2,237,935.

A new slasher is now in operation at Iroquois Falls, Ont., by the Abitibi Power & Paper Co. It is situated on a spur line of the pulp mill track. As the cars come over the Abitibi Railway & Navigation Company's line they are spotted opposite the slasher. The automatic stakes are tripped and the logs rolled down into the pit at the bottom of the jack ladder with a capacity for one full load. The logs are then fed on to the jack ladder in the usual way. The capacity of the slasher is 1,200 cords a day.

Word comes from Oxford County, Ont., that not in years has there been so much activity in wood-cutting as during the present season. In many districts cutters have been steadily at work since the early part of the winter and there has been a constant demand for green wood and the better class of beech and maple of stove length. The sawmills in Oxford County have also been running to capacity and more logs have been taken out for lumbering purposes than in several years.

When the Pennsylvania Retail Lumber Dealers Association held their annual convention at Pittsburg recently an estimating contest was on the programme. The prizes were \$50, \$30, and \$20. The contest was quite difficult as prices had to be taken from certain lists with changes in certain cases at a flat rate and in others at a percentage rate. The winner was \$36.84 under the correct figure which was \$4,250.28. The spread between the highest and lowest figures was \$1,133. This should explain many cases of supposed price cutting in Pennsylvania.

Eleven million acres of the forested area of Patricia, which will be tapped by the James Bay extension of the T. and N. O. Railway have been completely mapped by the Ontario Department of Lands and Forests. The information was mostly gathered by seaplanes last summer, observers sketching in the tree covered areas from aloft and later checking up the information by ground parties. The result has all the features of the standard survey method with the additional accuracy and remarkable speed which only the aircraft can supply. The entire job was accomplished in a fraction of the time formerly occupied by forest surveyors operating from the ground.

## Get Your GIDLEYFORD Now at the New 1923 Price

"Everything you want, and nothing you don't," is an apt way of describing the GIDLEYFORD. Truly it is a sensation. And the price—which, of course, is only made possible by quantity production—has completely upset all existing standards of value in this type of boat. Length 24', Beam 5' 6".

Summer is not very far away, and when it does

come you'll wish you had a GIDLEYFORD. But we can't guarantee delivery unless you get your order in now. "A word to the wise—"

Price reduced to \$1250 F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

We also manufacture the famous Gidley Standardized Rowing and Power Pointers, specially designed for river, lake and mill pond work.

Prices and full details promptly forwarded.

**GIDLEY BOAT COMPANY, LIMITED,**

**PENETANG, ONT.**

**T**HE best typist must use the best typewriter. ¶ For seventeen successive years the World's Championship for speed and accuracy has been won on the Underwood.

And throughout these 17 years the Underwood has averaged more than 20% greater speed and accuracy of mechanical operation than its nearest competitor.

The big item of cost in producing your typewriting, is the salary of the typist.

If you compel her to use any typewriter other than an Underwood, you handicap her to the extent of 20% of her ability.

So, if you pay her \$1,000 a year, you lose \$200—not for one year, but for every year she uses the less efficient machine.

***Have you seen the New Underwood?***

## Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power.

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

## When you can get a *new* 60" x 16' Boiler for \$1637

When you get a new 60" x 16' Boiler for the very moderate sum of \$1,637.00, it does seem foolish to go on "putting up" with old, shaky, obsolete, steam washers that cost more in fuel, repairs and attention than you'd like to see in plain print, doesn't it? This price in-

cludes suspension harness and columns, gives you 90 h.p., 125 lb. pressure and the Boiler is built to pass the new Interprovincial Codes. Other sizes in proportion. Here is one of the best investments you can make for 1923. Let us send you full particulars.

# The Ideal Edger for Light Mills

## Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

**SAWS**—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

**DRIVE PULLEY**—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

**SAW ARBOR**—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

# Rubber Goods FOR LUMBERMEN

**Belting** Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

**Packings** "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

**Hose** for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

**Fire Hose** One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

**Rubber Footwear** We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

# Safeguard Your Property

WITH A

## DELUGE FIRE PUMP

---

APPROVED BY THE UNDERWRITERS

**The cost of this pump will be a direct saving on account of reduction that can be obtained in insurance rates.**

**What would your loss be if fire visited your yard or mill tonight? Why take chances?**

Fire is an ever-present source of danger to the lumbermen. Unless fire fighting apparatus is at hand, the blaze will sweep through yard or mill with little chance of checking it. Protect your lumber and mills. Be prepared for the fire that may come any time, specially with the approach of the dry season.

The Deluge Fire Pump provides you with a means of extinguishing it before damage is done. This Pump is a modern fire department in compact form—a mobile machine that can be drawn by hand, horse, automobile or truck at the base of fire and is instantly ready for service.

Send for full particulars, prices and specifications. Don't wait till it's too late. Write today.

# ATKINS

## STERLING QUALITY SAWS

### The World Over

In every progressive sawmill, woodworking plant and furniture factory, you will find that the saw users are acquainted with the high quality of Atkins Sterling Steel Saws. They are making money for their owners by turning out work at the lowest possible price.

*It's the super quality of Sterling Steel, our exclusive formula that makes Atkins Saws supreme.*

If your mill is not using them exclusively, why not make a complete installation and profit by the service that is built into them. Send for Atkins literature, and learn why

**ATKINS IS ALWAYS AHEAD**

**E. C. ATKINS & CO.**

Established 1857      The Sterling Quality Saw People

Canadian Factory, HAMILTON, Ontario

Branch carrying complete stock, VANCOUVER, B. C.

**MADE IN CANADA**

Yates Type A-1 is used extensively in mills which have considerable planing, matching and transit work. It comes nearer perfection than any other of its type.

This machine produces high grade quality of work you demand. The perfect edges on stock run through this machine are ideal for matching and jointing. Equipped with or without profiler.

All the working parts are carried upon the one piece base, built close together, easily accessible and adjustable, so that it is a compact, sturdy machine, occupying a minimum of floor space.

When you need a medium capacity Planer and Matcher, remember Yates A-1 will produce large and fine production at low costs. Complete illustrated description of this machine will be sent you upon request.

# Gates Furnace

## For Burning Sawdust and Hog Fuel

Gates Engineering Co. Ltd., 314 Notre Dame St. W.  
Montreal

*Will burn tan bark, hog fuel and sawdust efficiently, with up to 60% moisture*

Gates Air Cooled Suspended Arches

Boiler Door Arches and Jambs

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned.

Note that fuel is partly dried before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace.

All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline grates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

**We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.**

# Shimer Products Famed Throughout the Industry

"EFFICIENCY" and "ECONOMY"—these two words tell in a nutshell, the story of Shimer success.

Take the Fast Feed Expansion Matcher Head (with 12 High Speed Bits) for instance, and note how this efficiency and economy is the direct result of scientifically correct construction.

The head is built heavy where the strain is greatest, and being devoid of all angles or openings, the wind resistance is lessened, and it cannot block with shavings. The straight knives are long, which assures greater service, while the circular knives can be set back and the straight knives jointed. In this way, the whole width of the straight knives can be jointed at one setting. The circular cutter is then brought to its proper position.

Let Shimer heads reduce your costs. Full details upon request

Linn Logging Tractor on operation of St. Maurice Paper Co., at St. Donat de Montcalm, Que.

# THE LINN LOGGING TRACTOR

The wonderful performances by the Linn Logging Tractors in operation on the limits of various Quebec and Ontario operations, have, so far, been witnessed by a great many interested operators.

On February 15th, an operation in the Laurentians (that of the St. Maurice-Paper-Company Limited), where two Linn Logging Tractors are operating, was visited by two representatives of an operator who has used tractors for several years and who has probably had the greatest experience in continuous tractor operation than any other Canadian operator: As a result of this visit, and the wonderful performance they witnessed, they have just placed their initial order for a Linn Logging Tractor, for immediate delivery, although they will have but twenty-five hauling days in which to use it—but with the Linn in their operation they will feel assured that they will get all their logs out.

As a result of their long tractor experience, the wonderful power and economy and reliability of the Linn is perhaps more evident than to an operator heretofore unused to Tractor haulage.

The end of the haul is fast approaching. A visit to a Linn operation will be valuable to you—and—no matter where you are operating, you have not far to travel to see a Linn in operation.

## WOODWORKING MACHINERY

is backed by 50 years of experience by ourselves and our predecessors in the manufacture of woodworking machinery as well as by the most experienced experts in Canada to-day.

No new design is adopted until it has passed inspection of these men as well as practical men in the field and actual users of wood tools.

No material goes into C. M. C. machines but the best for the purpose.

No workman is employed in the manufacture of C. M. C. machines unless "he is onto his job."

No C. M. C. machine is shipped without an actual running test by experts.

No C. M. C. machine is sold but it is warranted to do the work satisfactorily that it is intended to do.

We manufacture, planers, matchers, moulders, belt sanders, revolving bed sanders, roll feed sanders, variety saws, trim saws, rip saws, self feed saws, band saws, band re-saws, jointers, wood lathes, ball bearing shapers, boring machines of all kinds, etc.

We illustrate our No. 708—48" Band Re-Saw which carries a 5" blade. You will notice that it is of the two post type. This method, after all is said or done, is the best way to support a revolving wheel whether on a Band re-saw or a wheel barrow.

Its weight and strength appeal to everyone and we are prepared to demonstrate it in our own shops when we have one on the testing floor or in many plants where they are in actual operation.

We have also many testimonials as to its merits.

The 708 is one  
of  
**"THE BETTER LINE"**

## Self Feed Saws and Strawberries

Izaak Walton speaking of strawberries said "Doubtless God could have made a better berry but doubtless he never did."

Someone could possibly make a better self feed rip saw than the C. M. C. No. 605 but doubtless he never did.

Every mill should have one good self feed rip saw or more—from the great big fellow with his private railway and dummy engine down to the little retail yard on the back street, and in all of them our 605 self feed rip saw will satisfy. It is the latest thing on the market and was designed by the man who originated every type of self feed rip saw worthy of the name in Canada—the last word. So why pay good money for out of date old busses when you can get the best in the land **without extra cost.**

There are so many points of superiority on our machine that we cannot enumerate them all here but we would be pleased to write you all about it or have the C. M. C. man call and tell you its features in detail.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

VANCOUVER ST. JOHN**

## **GREENING'S WIRE ROPE**

**Its Quality Pays**

Greening's Standard Crucible Cast Steel, Best Plough Steel and Acme Steel Ropes are made from wire specially manufactured and unvarying in quality.

All the wires are carefully tested for tensile strength, elongation and tension; all material that does not conform to the highest standard is rejected. Records of tests are kept for five years and there is no possibility of inferior material entering into these ropes.

Greening's Wire Rope, as used by Canadian Industry everywhere under all conditions, is proof positive, of the fact that "quality pays."

Our data files are always at your disposal or write for catalog.

## **Gerlach Modern Machinery Produces Cheaper and Better**

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### **MODERNIZE YOUR PLANT**

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### **BUILD**

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

### **CYLINDER SAWS RESTEELED**

### **MODERN BOXBOARD MACHINERY**

## **The Peter Gerlach Co.**

**Columbu\*, Winter and Leonard Sts.  
CLEVELAND, OHIO**

# The American Steam Steel Frame Press

**T**HIS baling machine is built in two sizes—the larger having a cylinder 30" x 45" and the smaller 26" x 45". With the larger cylinder, shavings can be baled with 60 to 80 lbs. steam or air pressure. The smaller cylinder, having less pressing surface, requires 70 to 90 lbs. pressure.

The reason we make two different size cylinders is this: where a mill operator has plenty of steam or air pressure and is not forced to save, the 26" x 45" cylinder will do the work. However, where the pressure is limited, the larger cylinder is best.

*Write us for Booklet*

explaining the American Steam Steel Frame Press—the machine that turns your shavings into cash.

## American Engine & Boiler Works Tonawanda, N.Y., U.S.A.

Manufacturers of marine, stationary and portable engines and boilers, etc. Repairing on all kinds of machinery. Acetylene and electric welding, blacksmithing, boiler and machine works, boiler pipe and fittings.

# A "By-Pass" Exhauster Pays for Itself Many Times Over

**T**HINK what a difference a "By-Pass" Exhaust System makes in your planing mill, sawmill or woodworking plant—how it improves the working conditions, increases the efficiency of machines and men, eliminates the danger of fire. It doesn't require any stretch of the imagination to see that such a system is going to pay for itself many times over.

That being the case, why not let one of our men make a survey of your plant and submit an estimate? No matter how unusual or difficult the conditions may seem, they can be solved the "By-Pass" way.

"By-Pass" exhausters will handle

the green sawdust from your saw-mill without clogging or trouble of any kind. Material does not pass through or around fan wheel. Fan is not overhung. Three bearings. No heating or shaking.

## You need haul only 10% to 15% by weight of the milk you use in camp

**O**N THE haul from the railroad to camp you'll appreciate the fact that Canadian Milk Products Powdered Milk weighs only a fraction of its equivalent in liquid or prepared milk. In fact it weighs but 10% to 15% of fresh liquid milk—for it is fresh milk with all the water, which constitutes over 85% in weight, taken out.

You'll appreciate Canadian Milk Products Powdered Milk a lot more when you use it in camp. It won't freeze or sour, is easy to store and convenient to handle. And you drink it or cook with it exactly as you would fresh liquid milk.

*Samples and information gladly sent on request.*

### TRUMILK

Powdered whole milk. Packed in 45 and 90 lb. drums. Order direct from us.

### KLIM

(Hotel size)

# A Complete and Modern BAND MILL

The many little improvements and refinements which are evident in this Band Mill show that the lumberman's requirements have been kept constantly in mind. They are consistent with our policy of offering to the industry the most modern and efficient equipment practical experts can advise. It is this policy which has kept the name "LONG" in the van of new developments and made it a guarantee of all that is best in sawmill machinery.

## THE "LONG" BAND MILL

Columns of full hollow box section, joined at the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible.

Guides swing on centre line of saw. Blocks adjustable in all directions. Quick opening, non-breakable pattern. Upper and lower bearings the same size and interchangeable. Chain oiling, water cooled, adjustable in all directions.

Protected steam cylinder to operate upper guide.

Dake engine to handle upper wheel.

# Let Steam do Your Setting

The hardest worked employee in the ordinary Saw Mill is the setter. The handling of large logs calls for great muscular effort on his part, while his work on the smaller logs is almost equally laborious, as he has to put through a much larger number of them.

Every cut makes necessary a new adjustment of the log, which, in the absence of our Steam Set Works, is accomplished by a long throw of the hand lever. Before the end of his day's labor, the setter is usually exhausted. In many mills, the setter, because of the fatiguing nature of his duties, is not required to work for as many hours per day as the other employees.

All this is changed by our Steam Set Works, making the labor of the setter so much less arduous that he can do a full day's work. He is also enabled to set logs more quickly, thus increasing the number of cuts that can be made in a given time; and the lumber produced is materially improved in quality and regularity. Instead of the sawyer being kept waiting for the setter—the usual condition in ordinary saw mills—the reverse is true, and the setter is usually waiting for the sawyer.

It goes without saying that the main purpose of a sawmill is to produce as much good lumber as possible, at a minimum cost. As the cutting capacity of the mill depends mainly on the speed with which the logs are handled, the importance of an appliance which will shorten the time required to move logs into position for the next cut, is apparent.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

### Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

**1923 Price—\$1250**

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

# Cost Records are *Feature* at Orillia Plant

## Follow an Order Through the Factory

*An Outline of the Cost Accounting System Employed in the Woodworking Factory of J. R. Eaton & Sons, Limited, of Orillia, Ont. Featuring the Flat per Man-hour Rate Burden Over That of Old Percentage System of Applying Overhead.*

At the recent convention of the O.R.L.D.A., Windsor in January one of the most widely discussed topics was cost accounting. A few ideas on the subject were given by the members who appreciated correct cost keeping, but the majority came to the convention with an open mind on the problem. No particular cost system was discussed but a few men complained that systems they had installed were not suited to the size of their business. Of course, there are a number of ways of keeping costs, which are claimed by the users to be the best. It would seem rather peculiar then, if these well-known systems could not be adapted to any size business. Correct costs of a business is what is wanted and the smaller the business the easier it should be to bring into play the fundamental rules of the system.

Many of those, who have complained about widely known cost systems not suiting their needs, have very likely tried to install it themselves without finding out what was necessary and not necessary for their size of business. Probably they got all balled up trying to use everything in the system that a business twice their size would not require and finally gave it up in disgust.

A representative of the "Canada Lumberman" had the pleasure of visiting the plant of J. R. Eaton & Sons, Limited of Orillia, Ont., recently, and was kindly given access to the cost system employed by that firm. The company employs about 150 men and are members of the the purpose of this article but rather to give some through the factory is to with the industry will be the plant when it is said on detail work.

To start at the beginning, which is ever the right thing to do, we will follow an imaginary order through the plant, keeping our eyes open to see how they keep tab on the cost of the work.

First of all, the order when received, is taken down on the general order form in duplicate. This particular order may consist of several different items of millwork, but they are all put down together on the general order form. The original is kept on file in the office and the copy sent on to the Billing and Detailing Department.

This department first bills out a factory order for each different job on factory order forms in triplicate (See Fig. 1). The original is retained by the office, the first or blue copy is given to the Detailing Department and the second, or yellow copy, is eventually placed in the hands of the shipper. When the Detailing Department re-

ceives the blue copies, which are really the work orders, they proceed to make the necessary working drawings for each job. When this is done, the required materials are visualized and requisitioned. These requisition forms although special, are plain and no printing on them. They are about 8 inches x 4½ inches and in triplicate. The required materials for each job are written on a separate slip. As they are in triplicate, the original is sent to the office. The first copy of the material slip is also blue, but smaller, of course, than the blue factory working order. The second copy is made of white cardboard and is given to the lumber store shed foreman. The material requisitions for the original general order, it will be understood, may now be in the form of several cardboard slips, depending on the

number of different jobs on the original order. The cardboard material slips are returned with the material to the factory.

All the preparatory work has now been completed on the order; the material has been previously kiln dried, of course, and is at the factory door; the working orders and material slips are in the hands of the foreman. Before starting the machinery and bench work of the different jobs on the imaginary order, we will consider our overhead or burden.

There are many ways of applying overhead. Some add a percentage on lumber; others on labor, plus material. Percentage is not the

most equitable or the most accurate way to apply overhead. A machine may be operated by a 60-cent man one day and a 40-cent man the next. The actual overhead is the same in each case but the burden charge will vary if it is applied as a percentage on the per man-hour rate. It costs practically as much to handle 1,000 feet of oak as the same quantity of hemlock, yet if the overhead is applied as a percentage of value, the charge will be nearly three times as much in one case as in the other. A better way is to divide the overhead and apply it as a fixed charge on a definite unit. The above method as outlined by the Millwork Cost Bureau is to divide all cost or expense that is neither direct labor or direct material into five divisions:

## Division of Burden

1. Yard Burden, which embraces all cost of handling and carrying lumber from the moment of its receipt until entry to the factory, or if not worked until taken over by the delivery crew. The burden is expressed as a flat rate (dollars and cents) per thousand board feet.

2. Kiln Burden, which is composed of all cost incident in dry-

[illegible]

True records are as necessary as a true piece of equipment

ing in the kilns. It is expressed as a flat rate in dollars and cents per thousand board feet dried.

3. Machine Burden is all cost—not counting direct workmen's wage—of operating the machine equipment and housing it and work-

[illegible]

The details are tabulated daily

men. It is expressed as a flat rate of dollars and cents per direct man-hour.

4. Bench Burden is all cost—exclusive of direct workmen's wages—of operating, the bench department and housing the equipment and workmen. It also is expressed as a flat rate per direct man-hour. Finishing is considered bench work unless in sufficient volume to warrant a special division for burden.

5. Commercial burden is all cost occurring after the manufacturing processes have been completed; warehousing, selling, general office expense, delivery (not freight) and administrative expenses. It is expressed as a percentage of the factory cost, which is direct material, plus yard and kiln burdens, plus direct labor, plus labor burdens.

From the foregoing it will be seen that there are three definite

units for applying burden,—unit per M feet, unit per man-hour and unit per dollar on factory cost.

Going back to the factory where the material for our order is being distributed to the different departments, the machine operators take a card (See Fig. 3) and punch it at a nearby clock when they start on the order. When they finish it is punched again and the exact number or fraction of hours put on the job can be readily calculated. The same applies to the benchmen. Their different times on the order are tabulated also. These cards are collected at the end of each day and taken to the cost accounting department. We'll suppose now that our order is finished and so will go into the accounting department and see what becomes of the time cards. A special card (See Fig. 2) is kept and handed in by the department foremen if so necessary of work done by men outside of their own departments.

In the accounting department they have sorted out the cards on our order and are tabulating on the reverse side of the cost sheet (See Fig. 4) the date, the number of hours and the cost of both the direct time of machine and bench work. After this is completed, the totals are taken to the cost summary (See Figure 5). The cost sheet has space for customer's name, order number, date and description of order. The machine burden, as previously explained, is obtained by multiplying the number of hours by a flat burden rate, which is developed through analysis of past cost records, preferably a twelve months' period. The additional labor and burden section at the bottom of the cost summary is for an additional production department if needed. If our order were tabulated on the cost sheet, we would add the totals of direct material cost, and the machine and labor costs and burdens and the result would be the factory cost. The commercial burden is then added, a percentage of the factory cost.

The cost sheet is purely a factory cost record and there is no accommodation on it for the yard or kiln burdens and waste percentage. These burdens, of course, are included in the form of a flat rate (dollars and cents) per thousand of the purchased delivered price of the lumber. The cost of the number of feet estimated for the specific order is then calculated on the unit cost per thousand at the factory door.

A feature of the accounting system in the J. R. Eaton & Sons' plant is the large payroll book which accommodates all the names of the employees. At the top of each page the different department names head the columns, and from the daily time cards each man's time is tabulated for that day under the department in which he was working. With this system it can be readily ascertained, within a few hours' notice to the accounting department, if need be, how many hours were spent in each department in the factory for any week, month or year, and what it cost. This information is very valuable for comparing each month's figures in the various departments.

## Montreal Retailers Want Definite Grades

The Montreal Retail Lumbermen's Association have had under consideration the grading of lumber, which is admittedly in an unsatisfactory condition in the province of Quebec. Builders and contractors assert that they too often do not receive the quality which they have contracted for; retailers complain that manufacturers and wholesalers do not always furnish the lumber specified when buying; and wholesalers have not infrequently declared that the mills are at fault, and that the retailers on their part make many unjustified claims.

Many suggestions have been made with a view to find a solution of this condition. One, emanating from the Montreal retailers, is that the Provincial Government appoint cullers who will inspect the cars and whose decision will be final. It is argued that such a plan will bring up the standard of grading; that the mills will find, by painful experience that they will have to grade more carefully their stock and supply what is agreed upon; that the wholesalers will be protected and be able to give positive assurance to the retailer; and that the retailer will be certain of receiving what he is paying for and will be in a position to guarantee the quality to his customer. In short, the Government culler will be able to guard the interests of all concerned, because he will be independent and his authority unchallenged.

On the other side, it is claimed that the plan—excellent on paper—is unworkable. It is pointed out that it would require a large staff to cull all the stock coming into, say Montreal, that delays would be inevitable, especially during the winter; and that the expense would be very heavy. There are also those who are sceptical as to whether the beneficial results predicted for the plan would materialize in actual practice.

This much, however, can be said with certainty—the absence of any positive standard throughout the province is a source of a very large number of complaints.

# Homely Virtues are Being Crowded Out Today

*Wholesale Lumbermen Listen to Stirring Talk on Need of World Returning to Simple, Honest Goodness of Our Grandfathers—Speed Mania Counts for Naught*

The varied character of the monthly gatherings of the Wholesale Lumber Dealers' Association was again in evidence at the March meeting held at the Albany Club, Toronto. M. B. Tudhope, barrister of Orillia, delivered a stirring address on "Some Aspects of Modern Civilization," and among the other speakers were Col. Alex. Fraser, Rev. Dr. A. H. Denoon and H. L. Pease, of Chicago, secretary National Association of Box Manufacturers. The attendance was large and the proceedings were marked by an addition to the membership ranks of four local firms,—Big Bear Lumber Co.; Thompson & Heyland Lumber Co.; Pedwell Hardwood Lumber Co. and the Kinnon Lumber Co. Col. A. R. Kenny, of the Big Bear Lumber Co., and G. D. Martin, of the Kinnon Lumber Co., were present and warmly welcomed.

A resolution moved by K. M. Brown and seconded by J. L. Campbell, was passed, extending sympathy to Graves, Bigwood & Co., Toronto, in the recent death of their accountant, John Emerson. W. E. Bigwood expressed his sincere appreciation of the kindly reference made to Mr. Emerson, whose passing had been a sad blow to the firm, with whom he had been associated for thirty-two years, not only as accountant but in a confidential capacity.

J. L. MacFarlane sang a song in good style and then Alex. C. Gordon, the chairman, introduced Mr. Tudhope, who proceeded to address the gathering along somewhat original lines. He is a speaker of wit, force and freshness of thought, and in regard to his visit said that all of us accepted responsibilities lightly when they were a long way off. In connection with our modern civilization, a definition might be a "concentrated method of making money." Living had become so complicated that the old-fashioned, homely virtues had scarcely room to breathe. The world was becoming "canned," in the sense that we get our news, our music, our politics, and even our religion, "canned" or colored. We accepted these "canned" products without thought as thinking for ourselves seemed with most people to be a lost art. The fault with modern civilization is that the world had many privileges to-day which it had never had before. People were quite willing to enjoy these but were not willing to assume the responsibility going along with them.

The trouble with the world was not economic but moral. We had built up an artificial state of things and were seeking to live up to it. All was hustle, bustle and rush for the sake of gaining a few minutes of time or adding to the excitement of existence, and in the end what did it all amount to? We were something like the kitten chasing its tail round and round. It did not matter whether the kitten caught its tail or not, and the same observation held good with respect to the speed and anxiety seen on every side.

## Get Back to the Old Virtues

The troubles in the world could not be fixed by statutes or adjusted by resolutions. We should all get back to good, old-fashioned goodness and virtues. The torch, the bomb and the knife have been tried but have never remedied anything. The explanation and solving of the riddle of modern civilization is so simple that we are constantly overlooking it. A peculiar trait of human nature was that the things we found most fault with are the very things that we are doing ourselves. We have too great a conceit of ourselves to-day, and it might well be asked, would the world not head toward another period known as the Dark Ages if the spirit of greed and grasp was not curbed. The homely virtues still lived and if it were not for these things working to a certain extent in the business world, we would be treading back dangerously near the Dark Ages. There was too much greed and speed in the business arena; everybody trying to get more. The simple trust and true honest friendships of our grandfathers' day seemed to have gone by. People nowadays did not seem to give a cuss or care a damn for one another.

Mr. Tudhope said he did not intend to preach a sermon but thought he was getting very close to it. The cure for all the perplexities and problems of modern life was the return to simple, straight old-fashioned kindness and goodness. There are many inspirations in the world, commercial, philosophic, scientific, etc., but there is another inspiration that causes sound goodness, and when our hearts become concerned in it and it gets to work, we will witness

the miracles of Christ. All are called upon to bring back into their own life simple goodness and a new conception of things. "A little bit of goodness," declared the speaker, "is akin to God and is everlasting." Mr. Tudhope urged a return to the old-fashioned friendships, faith, trust, confidence and brotherly love of the past—the goodness of other days.

Col. Alex. Fraser spoke of the need of quiet thinking. The trouble to-day was that everything was prepared for us and we neglected deep thinking in our own interests. By the exercise of thought in the right direction, and remaining cheerful, we could face our problems and solve them. Reasonable men were devoting attention to affairs and realized the weakness of civilization at the present time. They were also seeking to break the environment and push on to something better and higher.

Rev. Dr. Denoon humorously remarked that the world was evidently getting better when it could get a lawyer to preach. Men were thinking to-day of great things and realized that a man's value to the community consisted in the service he rendered and the nature of that service depended upon the quality of his character and disposition.

## Effect of Trade Organizations

H. L. Pease, of Chicago, secretary of the National Association of Box Manufacturers, said he had been pleased with the character of the addresses during the evening. One of the biggest factors in the progress and welfare of the world was in trade associations. He did not believe any man could belong to such a body without being a better business man and a better man himself. Brotherly love in business had superceded the jealousy and suspicion of former days, and now those engaged in the same line of industry met with higher purposes and nobler aims in view.

At the close a hearty vote of thanks was moved to Mr. Tudhope by J. L. Campbell and W. E. Bigwood. In replying Mr. Tudhope paid a brief tribute to the work and worth of trade associations, their broadening and uplifting effect. Where men formerly convened and listened to lewd stories or obscene references, things of greater and more vital moment were now considered and discussed, tending to bring out all that is best in ourselves.

Guy H. Long, of Hamilton, who was in Toronto attending the district Rotary convention, was given a cordial reception after his absence for some months. He stated that he was pleased to see many new faces around the festive board, which was an indication of growing influence and added membership. The present occasion was also one of interest to him in that it was the nineteenth anniversary of the birth of the Long Lumber Co.

## Lumber Business is Active Everywhere

W. B. Mershon & Co., of Saginaw, Mich., state there has never been a time since they have been manufacturing band saws,—and that is nearly thirty years,—when they have had as many unfilled orders on their books as at the present time. They have 17 band rip saws ordered and various other resaws for sawmills, planing mills, etc., which brings their total up to about 40.

W. B. Mershon, president of the company, says that they turn out about four machines a week and are thus filled up for a long time ahead. "Our prosperity," he adds, "is caused by the prosperity of the lumber business and the country as a whole. All lines of trade seem to be active and there is going to be an enormous amount of building this spring. People have pretty generally made up their minds that they are not going to get their material and labor any cheaper by waiting. They have already waited longer than they wanted to so they are just going to shut their eyes to it and build. The farmers to the south are feeling better and are getting a good price for their cotton. I wish the wheat farmers of the west and northwest were sharing in this prosperity to a greater extent."

Concluding, Mr. Mershon adds,—“Business is good and is going to be good in this country for quite a while. Next year will be a Presidential year and I never knew business to be good during a Presidential campaign so you might just as well make hay while you can, for next year we will all probably be dormant.”

# Big Undertaking in Quebec Province

## Minister of Lands and Forests Says Waterpowers Cannot be Held Inactive by Speculators

In a recent address delivered by Hon. H. Mercier, Minister of Lands and Forests for Quebec before the Canadian Club in Montreal, he made it clear that the time was past when Quebec's national wealth in water powers could be exploited for the entire benefit of the interests owning them, and that the era had even more emphatically passed when such water powers could be secured and held inactive by speculators. He emphasized the fact that Quebec's water power wealth was so vast that even of the known possible developments only a small proportion had been utilized, while in the more remote sections of the province there were possibilities of developments to the extent of millions of horse power which had not even yet been surveyed.

A contract had recently been let for the Lake Kenogami storage dam, to ensure a steady flow of water to the pulp and paper mills at Chicoutimi and Kenogami. At present these mills could only operate at full capacity four or five months a year. When the dam was completed they would work the year round, and their annual capacity would be increased by 50,000 tons. The dam would cost about \$2,000,000, and the benefitting companies were bound to pay the Government interest, sinking fund, maintenance and provision for a small profit to the province. (Applause.)

It was a notable fact that most of the important power sites, capable of over 50,000 h.p., were situate within reach of industrial centres. Recently the contract had been let for the big dam at the grand discharge of Lake St. John, the contract with the Quebec Development Company covering a long term of years requiring them within five years to develop a minimum of 230,000 h.p., at a cost of \$12,000,000. To utilize such electric energy would mean the erection of mills representing \$15,000,000.

Recent Dominion figures had shown that the commercial power of Quebec's hydraulic forces represented 11,604,052 h.p., or double that of Ontario. At present 500 men are employed at the preliminary work at the Grand Discharge, which would be increased by 2,000 men within two months, and later on by 2,000 more, and the whole development would be completed within four years, while the dam would raise the level of Lake St. John, to the great benefit of its navigation.

Another recent important contract made by the Government was on the North Shore of the Gulf, and involved the lease of 2,000 square miles of timber limits, and a 75 year lease of the Outardes River power. Under competitive sale an annual rental of \$6,000 was paid for the water power, with \$400 a square mile bonus for the timber limits and the regular \$2.70 per thousand stumpage, the whole contract going to the Ontario Paper Company at stumpage dues equal to \$6.05 per thousand feet, the largest ever obtained, while the company bound itself to develop 15,000 h.p. and to build and operate a pulp and paper mill of 100 tons a day capacity. This, said Hon. Mr. Mercier, was one of the most favorable transactions the province had ever made for the people, and would mean great industrial development for the North Shore.

Mr. Mercier mentioned other important water powers on the North Shore, and in other parts of the province, running from 50,000 to over 100,000 or more h.p. The time had come for the utilization of the province's public resources to the fullest possible extent.

## Claim is Allowed on Timber Contract

Napoleon Turcotte et al. were successful in their action against Gedeon Fredette, in a judgment given recently by Justice Mercier in settlement of a case heard in the district of Hull, Que. The court condemned the defendant to pay the sum of \$300.56, with interest starting from the date of the institution of the action and the costs. In default of payment of this sum the court ordered that 115,945 feet of wood, which had been seized, be sold according to law, so that the plaintiff be paid the sum claimed in the action.

The plaintiffs sued the defendant in recovery of a sum of \$433.50 and accompanied their action with a conservatory seizure. The plaintiffs alleged that during the month of May, 1921, they contracted to cut for manufacture hard wood for the defendant in the parish of St. Remi of Amherst, in the district of Hull. During the months of May, June and July they cut 115,945 feet of hard wood for the defendant. The value of such work was reckoned at the rate of \$9 a thousand feet.

In June, 1921, defendant paid on account \$210; in July he paid \$400, making a total of \$610. The balance due was therefore \$433.50. The wood cut by the plaintiffs was still at St. Remi of Amherst, and

they took a conservatory seizure on it, claiming that they had a right of retention on the wood as a guarantee of payment of their wages.

Defendant pleaded that he had nothing to do with the plaintiffs, but had made arrangements with Rev. Mr. Tremblay, parish priest of St. Remi of Amherst, who contracted to cut the wood at a cheaper rate than anyone else. Defendant said he had paid the parish priest the sum of \$610 for the work done.

Justice Mercier said that there were three questions to be decided. The first was whether Gedeon Fredette had contracted with the parish priest of St. Remi of Amherst or with the plaintiffs for the cutting of the wood. The second question was, what were the terms of the contract, supposing that the contract was between the plaintiffs and the defendant? The third question was, what should be charged for the work under the circumstances revealed by the evidence in case the rate had not been definitely fixed by the contract?

There seemed to be no doubt, declared Justice Mercier, that the contract was between Fredette and Napoleon Turcotte et al., with the parish priest aiding. The proof also showed, in the opinion of Justice Mercier, that when the contract was made it was agreed that the plaintiffs would cut the wood as cheaply as possible, no definite rate being fixed. The lowest rate asked for by other mills was \$8 a thousand feet for hard wood and \$7 a thousand for soft wood. The proof also showed that the defendant's wood was difficult wood to cut and the rate of \$9 a thousand feet charged by the plaintiffs was therefore not an exorbitant rate, under the circumstances. In settling the third question, the court decided that, as there had been no rate fixed by the contract, it came within the province of the court to fix the price.

Justice Mercier proceeded to assess the value of the work and taking into consideration all the conditions, he reached the conclusion that there was a balance of \$300.56 due to plaintiffs. Judgment was given accordingly.

## Operation of New Type Gates Furnace

The Gates Engineering Co., Limited, 314 Notre Dame St. West, Montreal, are among the few firms who contract for and specialize in boiler setting and furnace building, oven work and power plant brick work. The President, Mr. J. W. Gates, has had a wide experience in this field of operation. Coupled with a thorough knowledge of refractories, this has placed him in the forefront of his profession and lead him to devote considerable thought to economic combustion of waste of by-product fuels and coal fuel. Mr. Gates has United States and Canadian patents covering furnace linings, non-clinkering furnace blocks, arches and jambs, air cooled and water cooled suspension harness for flat arches suitable for burning sawdust, shingle hairs, edgings, tan bark, paper mill refuse, etc.

To burn these waste fuels under boilers efficiently depends upon three conditions, developed in the Gates Engineering Company's patented furnaces,—high temperature, correct supply of air, complete mixture of pre-heated air with fuel gases and taking care of 50 per cent moisture.

With these conditions under control, furnace efficiency is secured. Mr. Gates has designed a furnace to overcome the trouble experienced in a standard furnace, caused by sawdust coning and burning at the edges only, which admits excess air and cooling off the furnace.

In the new type of furnace installed down east in one of the large pulp and paper mills, Mr. Gates has provided a perfect method of feeding the fuel to the grates of the furnace at precisely the rate at which combustion takes place. The furnace, which is fitted with grates at an angle of 54 degrees, permits the fuel to flow in a flat stream covering the grates with an even bed. As the fuel is consumed more is supplied by gravity and a bed of unvarying thickness is maintained. The thickness can be changed at will to suit the draft by raising or lowering the fuel louvers. The flat fuel bed of sawdust insures proper draft distribution and greatly increases the rate of combustion. With the furnace just installed the company are developing 747 h.p. with a water tube boiler containing 5,000 square feet of heating surface. Prior to the changing from a standard setting to a "Gates patent furnace" setting, the best that the company could get was 250 h.p.

The furnace under that unit has been built to burn any kind of fuel, sawdust, tan bark, chippings from wood room, shingle hairs, lathe material cuttings (or coal). If necessary, when waste fuel is not available, firing can be done through the lower fire doors provided for this emergency. A set of shaking and dumping grates is fitted to this type of furnace and also a moisture absorbing roof, making the furnace an all around, up-to-date, efficient furnace which develops perfect combustion of fuels.

# The Log Driver's Lure

## Prelude—The Magic of Spring

By M. D. Geddes, Calgary

King Sol, beaming down from his pathway on high,  
Flung a whiff from his nostrils that reached into space;  
King Winter rebelled that his rival should try  
To again wrest full power in Spring's time-honored race.  
But the slow-lengthening days under Sol's kindly smile  
Undermined Winter's strength; 'tis the logic of life—  
Strength is never so strong that it holds all the while,  
And weakness is often the stronger in strife.

So the ice and the snow felt a new life within,  
An impulse to move, to be onward—away,  
And blindly obedient some new goal to win,  
They start ever ready, content to obey;  
At first a mere trickle, a splashlet of sound,  
A sweet droning hum in the murmuring rills;  
Then wide foaming torrents, log crested, abound,  
Dame Nature now rushes Man's grist to the mills.

The pent-up resources of each flake of snow  
Have broken all bands; each joined with its neighbor  
Is brimful of energy, surging to show  
Its bouyant, aggressive contempt for hard labor;  
Just load on its back the entire winter's pile,  
And swiftly the slave does the task of its master;  
But should the poor boss leave his job for a while,  
The slave's mighty strength piles up heaps of disaster.

The long grind of winter is ended at last  
The log driver's dream has again become true;  
The spell of adventure around each is cast,  
Full stout are the hearts of that manifold crew.  
The pull of the peavey each riverman knows,  
The thrill of the moment he breaks his first jamb,  
The spice of the danger is gripping, and grows,  
So Tom, Dick and Harry are there with black Sam.

With peaveys and canthooks and pikepoles galore,  
Calked boots, rusty boom chains, a light slippery boom,  
A dry squeaking windless, each turn a sad roar,  
Thus slowly the gang crosses old Benson's lagoon  
Where the whole winter's cut had been piled mountain high,  
Awaiting the magic of spring's mystic wand;  
And now at the river's mouth safely they lie  
Till Mac thunders forth his gruff word of command.

'Twas a galley slave's life to cross Benson's lake,  
A slow steady grind at the windlass each day;  
While ahead Spirit River, swift flowing, oh, jake!  
The heart of each driver was bouyant and gay;  
For danger is joy to the log driver's soul,  
And sweet is the music of waters a-swirl;  
Each courting the chance of an uncertain goal,  
With the zest that he would the fond smile of a girl.

The morning was fair as a spring morn can be,  
The balm of the air and the whiff of the breeze  
Made life one grand joy, and yet that day three  
Should find their last resting place under the trees;  
Big Mac gave the word and Joe opened the boom  
Then swiftly each log found its place in the stream;  
They jostled each other, each claiming more room,  
Crisscrossing in sport like a "mad hatter's" dream.

At the gulch near Guy Porter's with swift water raging  
And the old saw-tooth rock in mid-stream towering high,  
Two forty-foot timber sticks, battle engaging,  
Soon blocked all the traffic and stemmed the stream dry.  
Four men had been stationed to keep this spot open  
And proud were the men who were picked for the fray;  
All realized fully that no higher token  
Could ever be paid, than was paid them that day.

With rivermen, leadership, courage, endurance,  
Rare dare-devil-deftness (pure gold of the trail)  
All whipcord and whalebone combined with assurance,  
With these naught can ever make log drivers quail.  
The might of "white waters," her trouble crop sowing  
Flings all that's afloat in one most mighty jamb  
The lot falls on Harry, with youth overflowing  
So girlish and slender yet scarcely a man.

He quailed not one whit as the key log he parted;  
Two swift starting strokes, how the chips flew afar,  
He quailed not forsooth as undaunted he darted  
Where madly logs leaped like wild stallions at war.  
The war of the waters, logs shrieking, death haunted,  
The crash and the smash and the madd'ning pell-mell  
And here this young stripling, alone and undaunted,  
Like the devil at bay in the cauldron of Hell.

Like a fisherman's cork, tugged far down, liberated;  
A log bobbing up flung him high in mid-air,  
He grasped a slim branch and swinging there waited,  
One arm dangling limp, yet no whimper or prayer;  
His friends in mute agony watched him in wonder,  
Oh God, but it's hard to see wrong crushing right,  
Here youth, courage, manhood seemed forced to go under  
And die in the grip of an unequal fight.

What! can it be possible? Look! how he's climbing,  
His teeth grip the branch then now reach with his hand,  
His friends now take heart, they too are combining,  
A rope, oh a rope for he yet may reach land.  
He flutters aloft like a bird winged and dying,  
Beneath him a maelstrom of saw-logs gone mad,  
White water, rocks, logs, are with each other vieing,  
To see who can conquer the game of the lad.

His arm muscles failing, his teeth losing power,  
He sees hell below on its annual spree,  
Appearances point that he's near his last hour,  
But he jumps square and true from his grip on the tree,  
Lands firm on a "king" log, all new pitfalls foiling,  
His chums jump to rescue this pall of their pride,  
All riding superbly through white water boiling,  
Seem more safely "horsed" than a rancher astride.

The might of Niagara thundered around them,  
The canyon of death gave their "steeds" a new thrill,  
The pitch and the toss of the waters, though, found them  
Well versed in the lore of all river craft skill.  
They knew none had ever survived this ordeal,  
And two had deliberately entered to save,  
Though outwardly rough they were true as tried steel,  
"My life for my friend" is the thought of the brave.

No pikepole to balance, arm broken, poor Harry,  
His log strikes a rock now he's fighting, midstream,  
Black Sam throws his rope, too short, it can't carry;  
He plunges at once like the "shade" of a gleam  
With long light'ning strokes now he reaches unerring,  
The spot where brave Harry had dropped out of sight,  
He dives, then is flung by a log, like a herring  
Is tossed when the fisher has ended its fight.

Tom's eyes they are glued to his log and the river;  
He knows not, as yet, that two chums are no more,  
Dick follows on foot with his nerves all a-quiver  
A-hoping 'gainst hope Tom may safely reach shore.  
The banks are so high and so rough is the going,  
Tom plunges and bounding and burling alone;  
A curve of the stream and Dick cuts across, knowing  
'Tis his only chance to forestall the "Swan Song."

The narrows he reaches all puffing and panting  
Of this wicked gorge this one spot is most damned;  
Tom soon swings in sight, you'd just think he was jaunting,  
The smile and the poise and the distance from land.  
Dick realized quickly his one chance was roping  
His chum on the crest of the "Devils's Delight,"  
He throws, arm unerring, the pluck found him groping  
Along with his chum in the darkness of night.

Together they shot through the sheet of white water  
Together descended midst logs, froth and foam,  
Together so far and perhaps yet hereafter,  
But not on green earth will both hithermore roam.  
Some pals later found them, a willow branch weeping  
Hung low over Dick, Tom was gasping for air,  
He quickly recovered but Dick still is sleeping,  
And down through the years three green mounds linger there.

The groundwood pulp mill recently completed at Kenora by Backus-Brooks Company

### New Pulp Plant at Kenora Starts

The residents of Kenora, Ont., a town which has long been associated with the developments of the forest interests of northwestern Ontario, are delighted at the inception of a flourishing industry which has been launched by the Backus-Brooks Company. The new 80-ton groundwood pulp mill, erected by this organization, started up recently and a new era of industrial life has been entered upon. The construction of the pulp mill will be followed by the building of a large newsprint plant, excavation for which will be begun in the near future. Kenora will thus take its place among the leading centres of Ontario as a pulp and paper producing municipality.

A description of the new plant of the Backus-Brooks Company is interesting and instructive. From the power house the power is transmitted to the pulp mill sub-station over two double circuit three phase feeders. The cables, twelve in all, are supported on steel towers, spaced 180 feet apart, the total length of transmission line being 4,000 feet. From the sub-station power is distributed to the various mill buildings; for the grinder motors the power is carried through at 2,200 volts to the grinder switchboard, while power for the other motors is carried from the sub-station, where the transformers are located at 550 volts.

The pulpwood used at the mill will come from the Lake of the Woods through a log sluice into Rideout Bay. A conveyor will take the wood from the water to the slasher table. Here it will be cut into four foot lengths and then go into the barker. The bark is taken care of by going through a 20 in. bark press, and is then conveyed to the boiler house for use as fuel.

The barked wood is carried to the storage room over the top of the magazine grinders, and is here stored for use when the wood room is not operating. There is sufficient room for enough wood to run the mill twenty-four hours at full capacity.

The grinder room is equipped with four standard magazine grinders, built by the Waterous Engine Works, Co. of Brantford, and each pair is driven by a 2,800 h.p. synchronous motor. The motor is direct connected to the two grinders, being situated between them, so that in case of repairs or replacement of stones being necessary, the grinder can be uncoupled and the other unit operated while repairs are being made.

The stock from the grinders flows by gravity to the bull screen. This screen is of the rotary outward flow type built by Hymac, of Montreal. The slivers are discharged to a catch basin at one end of the screen, collected and put back into the magazine and reground. The accepted stock from the bull screen is then pumped to the flow box ahead of two Sherbrooke knotters, where any coarse slivers that the bull screen fail to remove, are taken out. The stock then goes through Sherbrooke centrifugals, and the tailing from the centrifugals goes to Sherbrooke tailers. The accepted stock flows by gravity to the wet machine room.

The accepted stock from the tailers reverts to the bull screens, while the tailing from the knotters and tailers travels to a Clafin engine to be reground. The system is entirely closed, and a one hundred per cent yield from the wood is available. No slivers, white water, or stock in any form is allowed to go to waste. White water is used throughout the mill except on the wet machine cylinders, and the wet machine felt showers. The fresh water used for pressure on the grinders discharges back into a suction tank and is continually reused.

The wet machine room is equipped with eight 84 in. Waterous wet machines, and two 86 in. Dominion machines, and four Southwark 600-ton hydraulic presses. Two Nash vacuum pumps supply the vacuum for the wet machine vacuum boxes.

### Sawing Season Will Begin Early

Many sawmills will be starting operations during the latter part of this month and early in May. It is not known yet how the supply of common help will be but it is stated that, in some centres, there will be an increase for rough labor around the mill and yard. Last year when the lumber business was dull and the outlook none too promising, some firms paid men 25 to 30 cents an hour but it is rumored that there will be an advance of 10 to 15 per cent, owing to the better trade outlook and the fact that men may be scarce at certain points. \$3.00 may be the minimum for a married man.

Speaking of the outlook generally, a leading Ontario operator stated recently that skilled labor, such as sawyers, doggers, setters, filers and others would receive the same pay. They had not been reduced nearly as much from the peak figure as had common labor and were, therefore, on a better basis. The men on the drives will perhaps, receive about the same as last year,—from \$2.00 to \$2.50 per day and board. It is expected that in all sawmill centres labor will be pretty well employed during the coming season.

### Appeal in Morin vs Hammond Co.

Notice of appeal from the recent judgment of the Supreme Court of Canada in the case of J. P. Morin, of Madawaska county, N. B., vs. the Hammond Lumber Company of VanBuren, Me., awarding the plaintiff \$10,900 with costs, including the costs of the courts, has been given by the plaintiff company who are preparing to take the case before the Privy Council at London, Eng.

The judgment of the Supreme Court of Canada was given during the month of December past, upsetting the decision given by the Supreme Court of New Brunswick on appeal from the decision of Mr. Justice Barry, in which Mr. Justice Crocket dissented. The plaintiff's claims were refused on trial before Mr. Justice Barry, the damages being assessed at that time by a jury at \$10,900, the amount finally awarded by the Supreme Court of Canada.

The original action arose out of contracts let by the Hammond Lumber Company for the cutting of some five millions of logs, subcontracted for by various operators; among these was the plaintiff, who had taken a contract to supply a million feet of logs. This arrangement was later upset by the departure of the chief contractor, who had sublet the smaller contracts, without making payments to the smaller operators. A new verbal agreement was claimed by the plaintiff to bridge the difficulty between the plaintiff and the defendant company, which was later repudiated by the company on the grounds that no contract existed, no written agreement having been made.

The case was first tried before Mr. Justice Barry with a jury, the plaintiff's claims being disallowed, while the damages were assessed at the amount of \$10,900. This decision was upheld by the Supreme Court of New Brunswick on appeal, Mr. Justice Crocket dissenting. In November of last year the case was argued before the Supreme Court of Canada.

### Logging Costs are Considerably Higher

The Huntsville Lumber Co., of Huntsville, Ont., state that their stock is considerably less at present than it was a year ago and there is a better demand for hardwoods. The trade outlook is regarded as better than in 1922. Costs of production during the past season have been higher owing to the increased wages for labor and more particularly as the winter in the Huntsville district was an unfavorable one for operating. Hauling was late in starting and the snow was too light to make roads. Influenza affected both men and horses to a great extent during the cold months.

# Retail Lumbermen Will Have Summer Outing

## Executive Decides upon Trip down the St Lawrence—Selects Standing Committees for Year and Decides to Hold Next Annual Convention in Toronto

A quarterly meeting of the directors of the Ontario Retail Lumber Dealers' Association was held in the Board of Trade Rooms Toronto, on March 22nd. Much important business was transacted, the standing committees were appointed for the coming year and plans made for a forward movement in many directions.

Toronto was selected as the next place of the annual meeting which will be held in January 1923, and it was also decided that the midsummer outing should be in the nature of a steamer trip, taking in the important points of Lake Ontario and the Thousand Islands. The details were left in the hands of a competent committee.

K. J. Shirton, of Dunnville, president of the Association, presided, and there were present:—Messrs. W. M. Tupling, Orillia; F. B. Van Dusen, Brockville; W. E. Savage, Mimico; J. M. Rodgers, Barrie; John T. Grantham, Brantford; M. R. Bogart, Chatham; A. R. Sanders, St. Thomas; J. C. Scofield, Windsor; S. L. Lambert, Welland; E. C. Russell, Walkerville; J. B. McKenzie, Georgetown; John C. Gilchrist, Toronto; and the secretary.

The president presented a report of Standing Committees appointed for the current year, as follows.

Insurance & Workmen's Compensation.—W. C. Laidlaw, Toronto, Chairman; G. P. Davidson, Ottawa; J. N. Rodgers, Barrie; W. C. Irvin, Toronto; J. C. Scofield, Windsor.

Legislation & Transportation.—B. F. Clarke, Glencoe, chairman; O. W. Rice, Welland; E. M. Barrett, Ottawa; R. J. Press, Hamilton; F. B. Van Dusen, Brockville; M. R. Bogart, Chatham.

Membership, East.—F. B. Van Dusen, Brockville; E. M. Barrett, Ottawa.

Central—John C. Gilchrist, Toronto; Tom. Paterson, Toronto.

West—J. B. MacKenzie, Georgetown; Harvey Crosthwaite, Hamilton; Andrew Wise, St. Catharines; J. T. Grantham, Brantford; Emil Kalbfleisch, Stratford; G. S. Zimmerman, Tavistock; O. W. Rice, Welland; H. J. Hall, Kitchener.

South—J. T. Wallace, London; L. H. Richards, Sarnia; A. R. Sanders, St. Thomas.

North—F. E. Hollingsworth, Sault Ste. Marie; Martin McDonald, Port Arthur.

Trade Relations & Arbitration.—J. B. Reid, Toronto, chairman; W. C. Irvin, Toronto; W. B. Tennant, Toronto.

Standard Sizes & Grades.—W. M. Tupling, Orillia, chairman; W. E. Savage, Mimico; F. B. Van Dusen, Brockville; W. A. Hadley, Chatham; G. S. Zimmerman, Tavistock.

The secretary reported progress in connection with the Mechanics' Lien Act, stating that the legal representatives were seeking to have some amendments made to the act, introduced by the Hon. W. E. Raney in the Ontario Legislature, which had already received the first reading. The secretary also reported in regard to the changes in the new act as compared with the old one, which made it to some extent a more satisfactory act for the lumber and supply dealers.

On motion of Mr. J. B. Van Dusen, seconded by Mr. John T. Grantham, the action taken by the secretary in connection with the Mechanics' Lien Act was approved, and he was instructed to take whatever further action he considered advisable.

### Building and Loan Association Proposal

At this stage of the meeting, Mr. J. B. Carswell of Toronto, Mr. J. M. Piggott of the Piggott-Healey Construction Co., Hamilton, and Mr. R. J. Mero, vice-president and general manager of the Trust Concrete Steel Co., Windsor, entered the meeting, having been invited to attend for a conference upon the subject of Building and Loan Associations. The necessity for local building and loan associations was then discussed by Messrs. Shirton, Scofield, Carswell, Piggott and Mero and, at the conclusion, Mr. Carswell stated that the visitors understood quite fully the views of the retail lumber dealers and would submit them to the directors of their own associations. He assured the lumber dealers that they could count upon a very considerable amount of co-operation from the contracting and building interests.

Mr. Carswell concluded with an invitation to the O.R.L.D.A. to become affiliated with the Association of Canadian Building & Construction Industries, with headquarters at Ottawa. Mr. Shirton, president of the O.R.L.D.A., advised them that the Association would take the matter into consideration and report subsequently.

Before the visitors retired, a short discussion took place in regard to the Mechanics' Lien Act. Messrs. Carswell, Piggott and Mero then withdrew.

On motion of Mr. M. R. Bogart, seconded by Mr. J. C. Scofield, the secretary was instructed to communicate with the secretary of the Association of Canadian Building & Construction Industries and ask them for full particulars regarding the objects of their association and the cost of membership, and to report at the next meeting of the Directors.

The secretary-treasurer presented a statement of Association finances for the first three months of the year showing a good balance on hand. On motion of Mr. J. C. Scofield, seconded by Mr. E. C. Russell, it was carried that the question of investing a portion of the surplus funds on hand should be left with the president and secretary, with power to act.

### Same Rate Continues on Joiner Work

Mr. W. M. Tupling reported that he and Mr. Rose of Ottawa had attended conferences with representatives of the railway companies and the Canadian Manufacturers' Association in connection with the proposed reclassification of freight rates for joiner work, and that the result was very satisfactory to members of our Association. The proposed new classification, which had involved increases in freight costs from ten to fifty per cent, had been abandoned by the railway companies. An agreement was reached which would practically continue the rates in effect, with one or two changes which were in the nature of reductions. Also, the minimum carload weight had been fixed at 20,000 lbs., although the railway companies had wanted to increase it. On motion of Mr. J. C. Scofield, seconded by Mr. E. C. Russell, it was carried that a vote of thanks be extended to Messrs. Tupling and Rose for their very efficient service in connection with these conferences, and that their traveling expenses in connection therewith be paid by the Association.

The secretary reported that Mr. G. S. Zimmerman, chairman of the Standing Committee on Cost Accounting, desired to wait until early in June before calling his committee together, on account of his own business year ending about that time. Mr. Zimmerman had stated that in the meanwhile he would get in touch with the members of his committee and take the matter up as far as possible by correspondence.

The secretary submitted a proposed trademark, which was examined by each member present, and on motion of Mr. J. C. Scofield, seconded by Mr. M. R. Bogart, the secretary was instructed to ascertain at what cost cuts of this trademark for the use of members could be obtained, and to report at the next meeting, and to pay if necessary the expenses that had been incurred in connection with the preparation of the trademark sketch.

In conformity with a resolution carried at the annual meeting, the next item of business was consideration of the distribution of the province into sections and branches. On motion of Mr. E. C. Russell, seconded by Mr. J. B. Van Dusen, it was carried that a committee be appointed to work out redistribution, in connection with the secretary, and report at the next meeting; the committee to be appointed by the president and secretary.

### Toronto Gets the Next Convention

The place at which to hold the next annual meeting was discussed. Mr. J. C. Gilchrist, Toronto, stated that the retail lumber dealers of Toronto would be much gratified if the meeting were held in Toronto. It was moved by Mr. W. M. Tupling, seconded by Mr. M. R. Bogart, and carried that the next annual meeting should be held at Toronto about the third week in January, on dates that would not clash with the annual meeting of the Canadian Lumbermen's Association; that the sessions should occupy three days; that a special committee should be appointed for the purpose of making the annual meeting a success, consisting of R. A. Laidlaw, Toronto, chairman; W. E. Savage, Mimico; T. A. Paterson, Toronto; T. E. Rathbone, Toronto, and the president, Mr. K. J. Shirton; and that this committee should be requested to work out a plan by means of which the expenses of the convention might be met by a charge made upon each member attending.

The directors then discussed the question of a midsummer outing. The secretary submitted information he had obtained regarding

a trip through the Thousand Islands to Montreal and return; a trip to Niagara Falls and Buffalo and return; and a trip on Lake Erie, taking in Buffalo, Cleveland and Detroit. A representative of the Canada Steamship Lines was summoned to the meeting by telephone and gave information as to available trips. On motion of Mr. J. C. Scofield, seconded by Mr. J. B. Van Dusen, it was carried that the midsummer outing should be in the nature of a trip taking in the important points on Lake Ontario and in the Thousand Islands, details to be left in the hands of a committee to be appointed, for whom further information would be furnished by the Canada Steamship Lines. The directors discussed the personnel of this committee, and finally the president appointed a committee consisting of Messrs. W. B. Tennant, Toronto, chairman; W. E. Savage, Mimico; John Irvin, Weston; J. B. Van Dusen, Brockville; J. B. MacKenzie, Georgetown; H. R. Bogart, Chatham; W. M. Tupling, Orillia, and S. M. Lambert, Welland.

On motion of Mr. J. B. Van Dusen, seconded by Mr. A. R. Sanders, a vote of thanks was carried, to be extended to the Toronto Board of Trade for the use of their Council Chamber for the meeting.

### Reliable Data on Strength of Woods

The question of the relative strength of different woods very frequently arises in manufacturing, engineering, building and many other branches of modern industry, and decision as to the kind of wood to be used for a particular purpose is often based on mere opinion, guesswork or figures of doubtful reliability. There is no necessity for this state of affairs so far as Canadian timbers are concerned as the strengths of all native commercial woods have been extensively investigated at the Forest Products Laboratories of Canada (Dominion Forestry Branch) Montreal, where authoritative information on the subject is on record.

The testing of timber for strength has been revolutionized in recent years and uniform methods are now in use at the government timber research laboratories in India, United States, Canada and elsewhere. These methods, which may be regarded as standard, cover every phase of the operation from the selection of the timber in the woods to the recording of the results of the various tests. Timber Testing is only one of the functions of the Forest Products Laboratories of Canada, but the extent of their investigations in this particular direction is indicated by the fact that upwards of 45,000 tests have been made during the past eight years.

### Snow Handicaps Logging in the West

A recent despatch from Vancouver says that the lumber industry of British Columbia has been crippled by an unprecedented snowfall. The sawmills of the province are built more like summer camps than like buildings suitable for zero weather and the cost of operating in cold spells adds from \$1 to \$5 a thousand to the cost of cutting lumber, thus taking more than the profit out of the trade.

Logging camps suffered even more than the sawmills as the snow was piled from four to six feet high in the majority of the camps, particularly in logging camps on Vancouver Island. It will be days before the loggers can get to work again and this is liable to hold up the supplies for the mills.

Never in the history of the lumber trade has the industry been caught in the same position it was lately.

All mills have their books full of orders, nearly all on a basis of \$21 for No. 1 common. Logs are scarce with every probability of an advance in prices, which would cripple the lumber manufacturer as he is already paying \$18 for his No. 2 logs and there would be no spread for the cost of cutting if logs continue to go up.

### Penetang Industries are Working Overtime

J. T. Payette, of the P. Payette Co., Penetanguishene, Ont., says that since last December, business has been exceptionally good. The Adams Engine Co. and the P. Payette Co., both of which are owned by Mr. Payette, have now as many employees as they did during the best times of the war. The industries are working three nights a week overtime and find it difficult to keep up with orders. Mr. Payette says the lumber business especially looks bright and he does not think there has been much wildcatting done. Many large mills have sold their output for 1923. Mr. Payette concludes,—"We recently had a letter from an American lath-buying firm who wrote us asking if we could not procure them some lath from the different concerns to whom we sold our machines. We took our

list and wrote each one individually, but all we were able to gather were three carloads of 32-inch spruce lath. This shows that the country must be pretty well cleaned out of lath."

### Canada Has Hidden Reserve of Lumber

That Canadian loggers have been unwillingly amassing a great reserve of perfectly sound logs for a more enterprising generation to collect is suggested by the Forest Products Laboratories of Canada (Dominion Forestry Branch). This reserve is to be found in the beds of those streams where log-driving has been carried on for many years. Such sunken logs will remain sound for thousands of years, in fact as long as the streams run over them, and no better way, declare the Laboratories, could be devised to protect them from the causes of decay. Many pulp and lumber companies estimate their loss of logs by sinkage at five to ten per cent so that a stream which has been used to drive logs from the forest to the mill for twenty years should contain at least the equivalent of a year's cut of good logs.

### New Retail Lumber Yard in Kitchener

H. Koepke, of Kitchener, Ont., who has been a well-known contractor for several years, is starting a retail lumber yard and planing mill in that city which will be in operation this month. The planing mill, which is nearing completion, is fully equipped with all the most modern machinery for the manufacture of sash, doors, etc. It is a two-storey structure with the installations distributed on both floors. The business will be known as the Twin City Sash & Door Co., of Kitchener. The firm will continue to do general contracting under the direction of Mr. Koepke, who is a progressive citizen.

### British Journal Criticizes Mail Service

Has the Canadian mail service to Britain deteriorated since the pre-war days. The Timber Trade Journal, of London, Eng., the organ of British trade, replies to a resolution passed by the Canadian Lumbermen's Association, deploring the absence of information about Canada's export of timber in the British press, by the statement: "There is considerable difficulty in obtaining news from Canada. Before the war mail was frequently sent via New York and was delivered in eight or nine days, whereas now, owing to the absence of an agreement with the United States, there is no certainty that the mail longer."

### Sudden Death of John Emerson

Many friends of the lumber industry will learn with regret of the death of John Emerson, 3 Algonquin Ave., Toronto, who died very suddenly on March 12th while on his way to work. He was accountant for Graves, Bigwood & Co., Bank of Hamilton Building, Toronto, and had not been in the best of health for some time owing to heart trouble. While boarding a King St. car at Sunnyside he was seized with a sudden weakness and expired a few minutes afterwards while being taken in an automobile to the hospital.

Mr. Emerson, who was 57 years of age, was born in Belfast, Ireland, and had been employed by Graves, Bigwood & Co. for thirty-two years. He joined the organization in Buffalo and had worked at Wahnapiatae, Nairn, Byng Inlet and Toronto. He is survived by a wife and family of eight children. His passing is greatly regretted by the members of the firm with which he was associated for so long a period not only in a financial but also in a confidential capacity. He enjoyed the esteem and respect of a wide circle of friends, many of whom attended the last sad rites.

### F. M. Anderson Joins Silent Majority

Frederick M. Anderson died recently in the Soldiers' Memorial Hospital at Campbellton, N.B., from the effects of the grippe and pneumonia. He was formerly woods manager of the Shives Lumber Co., but retired from that position some time ago. Mr. Anderson, who was in his 68th year, is survived by his widow, one daughter and three sons. Mr. Anderson was very active in the promotion of the Soldiers' Memorial Hospital at Campbellton, and was secretary-treasurer of that institution. He donated a nurses' home in connection with the hospital. He was also chairman of the Campbellton Board of Education and was a prominent figure in Masonic circles.

## Why Not Imposing Signs for Yards?

**Dealers Inclined to Under-estimate Value of  
Attractive Publicity in Name and  
Show Windows**

I was informed there was no stock coming into the yard at present, nor had any been bought for the spring anticipations. It didn't surprise me to be told that, "Collections were slow." There is another yard in the city to which I refer but a stranger would never know it. Like as in many other places it is located off from the principal streets and is hidden from them by intervening buildings. This may do in a small town where one can see all over it. I discovered the difference, however, when I began to do business where I now live and after the elevation of the railroad tracks my yard was hidden behind it so I put up a large sign on the other side where folks could see it and know where my yard was. The result was an increase of callers at the office.

There has always been an underestimating of the value of signs generally among retail lumbermen outside of the larger cities. It illustrates in another way the attitude of the country dealers in their assuming that everybody knows where they are. While this may be true, yet there is a certain psychology about an attractive sign that operates to the benefit of that yard. It is always suggestive of an invitation to call there. Further, it indicates that the proprietor is an enterprising individual and that of itself is attractive. Then again, it being conspicuous, people see it oftener which serves to act more constantly in keeping that yard in mind; and when people want anything in that line, that is the first yard they think of.

The greatest merchants in the world are noted for their display of signs, show windows and general liberality in advertising. This "peculiar" race knows the business value of attracting the attention of people. Go in any city and you can notice this. I'll venture to say, too, that whenever you see a large attractive sign at a lumber yard and a more than usual attractive appearance of the whole plant, you will find, as a rule, that that yard is doing the leading business. This, of course, may not be all the reasons for it, but in what traveling I have done about the country, I have found this to be almost invariably the prevailing rule.

The more progressive dealers are recognizing this psychological value of attractive signs and show windows, and in this way making their yards one of the show places in the town.

I stopped off at—between trains and utilized a few minutes calling at the office of one of the line yards there. I happened to know where the yard was. If I had not, I would have had to inquire as to its location, for like the other yard spoken of, there was no visible sign to show it and I know there are people living in that town that don't know where it is, for I had to ask three persons before I found one who could tell me. I did this just to make a test of what I have been saying in regard to yards without signs.—C. H. Ketridge, Evanston, Ill.

### How Ontario Firms View Outlook

Mitchell Bros., of Holland Centre, Ont., who are quite extensive operators in hardwood, state that the volume of trade in 1922 was considerably more than that in 1921 and that profits and prices were both better. Stock is about 50 per cent less than it was last year at this time. Mitchell Bros. consider the outlook for 1923 as good and they are getting more inquiries for local and export demand than they have for the last two years. The prices offered are from 10 to 15 per cent better for heavy stock of hardwood, such as maple and birch. The demand and prices for the lower grades of 1-inch lumber are very poor.

The McNaught Lumber Co., of Pine, Ont., state that wages in the camp during the past season were from 20 to 25 per cent higher than they were a year ago and operating costs right through promise to be from 10 to 15 per cent more than last year. The log output of the firm is double what it was last winter and their stock on hand is only about half as much as it was in the corresponding period of 1922.

### Lumbermen of Chatham are Optimistic

The lumber firms of Chatham, Ont., are preparing for one of the busiest seasons in their history. The demand for material indicates early spring activities and dealers have large stocks on hand ready for the rush. A local newspaper gives the following information regarding how Chatham lumbermen view the situation:—

W. A. Hadley, president and general manager of the S. Hadley Co., stated that the time of speculative building of houses in Chatham is past, that those now being constructed and under consideration

in the city are "homes" as evidenced by the grade of timber asked for. This enterprising firm have orders for many houses and improvements already and their sales for the two months of the year 1923 far surpasses those for the corresponding months of last year. Prices in lumber increased a short time ago on account of the demand, but it is confidently expected that they will now remain steady although those who wait for another year to build will probably be confronted with a greater increase then.

Percy Pigott, manager of the P. G. Pigott Lumber Company, expects the greatest volume of business since he entered into full control of the firm. Enquiries are being received every day in their office for lumber and the architects of the city have informed them that they have on hand many plans for construction of buildings as soon as the weather permits. The amount of business transacted by this firm during the two months just past is almost as half as much again as the first two months of 1922.

S. C. Hadley of the C. and J. Hadley Lumber Company said that he wished it understood that in spite of all the pessimistic remarks to the contrary Chatham is in one of the most prosperous periods in its history. In his business a good check may be kept on the general condition of the city and he is well pleased with it as it is now. Prospects are the best he believes that he has ever known them and he looks for the necessity of bringing into the city a number of men this summer to fill the demand for labor.

### Montreal Wholesalers Favor Better Grading

The members of the Montreal Wholesale Lumber Dealers' Association held their monthly meeting on March 15th at the Mount Royal Hotel, J. S. Bock presided. The question of terms of sale was discussed at some length and it was agreed that the terms to the trade shall be 2% 30 days from date of shipment, or net,—not longer than 60 days from date of shipment, such terms to become effective on and after May 1st, next.

The desirability of securing more uniform grading of lumber was briefly discussed. It was decided to appoint Messrs. J. S. Bock, C. Villiers, W. B. Blair, J. Laferte, G. M. Strong and O. Page as a committee to define the grades of certain classes of spruce, pine and hemlock. This will serve as the basis of any decision of the Arbitration Committee.

U. E. Germain mentioned that the Quebec Department of Lands and Forests had under consideration an educational campaign for establishing better and more uniform grades and had asked him to assist in the work.

W. H. Cote stated that the Entertainment Committee were contemplating arranging an outing during the summer. The programme would include a golf tournament open to wholesalers and retailers, for which the "Canada Lumberman" had offered to put up a cup.

The Montreal Wholesale Lumber Dealers' Association is also considering the subject of lumber grading, but from another angle. A committee has been appointed to define certain grades of spruce, pine and hemlock, with a view to assisting the work of the Arbitration Committee. This will provide a basis on which any work can be done, and will also be of value should there be a widespread movement to obtain more uniformity. Besides this, the Quebec Government has under consideration propaganda work directed to secure uniformity and better grading—so that there is evidently an awakening to the importance of solving this difficult problem.

### Creosoted Wood Blocks for Stable Flooring

Wooden flooring for stables has much to recommend it, but unfortunately the conditions connected with its construction and use are specially favourable to decay. Frequent renewals of such flooring often cause owners to adopt some more durable and less comfortable material. The Forest Products Laboratories of Canada (Dominion Forestry Branch), Montreal, point out that the remedy lies, not in discarding wood and substituting concrete or stone pavement, but in using wood which has been rendered proof against decay. For this purpose creosoted wood blocks are suggested as possessing the greatest number of advantages as a stable floor. Creosoted wood-block flooring is warm and easy under foot, very resistant to wear, easy to clean and has sanitary and vermin-repellant properties combined with a high resistance to decay. Owing to the establishment of several wood-creosoting plants in Canada, such blocks may be obtained at a reasonable price, and the cost of maintenance is very low.

The Spanish River Pulp & Paper Mills, who have plants at Espanola, Sturgeon Falls and Sault Ste. Marie, Ont., are now turning out over 700 tons of newsprint daily. This is a new record in the line of production.

### A Trail That Leads to Nowhere

Many new companies in various lines of business are being incorporated, some with large authorized capital and others with only a moderate amount. Each weekly issue of federal and provincial Gazettes pours forth a veritable flood of new, impressively named organizations which have secured letters patent and are, apparently, ready for business. The head office is given but no number or street address, and among the "provisional directors" are the names of pretty stenographers, unknown bookkeepers, ubiquitous office boys and plain ordinary clerks. At times the name of a solicitor is thrown in, ostensibly for good measure, and this is about all that is known of the company.

People, who desire to do business with the newly-formed concern, who would like to know where and when it is going to function, who are the men really behind the enterprise, etc., are generally up against a stone wall so far as getting any satisfaction or gathering information is concerned. "Dummy" directors or "figureheads" are named. Many companies might also come under the same category for very few of them are apparently ever seen or heard of subsequently. Just why they obtain charters is a problem or a riddle. They, possibly, think that they are going to do something or some sweet day be heard of in a certain arena, but, beyond the amount of money paid into the provincial treasury for securing letters patent and what a lawyer receives for his services, nothing tangible results in many instances.

There is an expression often heard about going into business "on a shoestring" and some incorporations are evidently formed on this flimsy foundation. This applies to lumber and woodworking bodies as well as others. The mercantile agencies and the press publish the names of recently incorporated concerns and their head offices. Letters are sent addressed to these high titled organizations, who have no definite habitation and no name recorded with the local postmaster or any one else. Back come all communications to the effect "not known," "no such firm," "never heard of here," "give number and street address," etc.

The present laws of incorporation seem to allow any three or five "mythical beings" to institute a "mythical company," with no specified personality or location. When persons apply to a "provisional" or "dummy" directors for data, the latter either pleads crass ignorance or declare that the identity and confidence of clients or associates must be punctiliously respected. The time never seems to arrive to reveal any information regarding the plans, operations or shareholders of the organization. It would appear that increasing numbers of concerns, in practically all lines of activity, are becoming incorporated for some motive other than legitimate expansion or

honest production. The names of numerous enterprises annually appear in the Gazettes and no more is heard of them. Like used automobiles no one exactly knows what becomes of them all.

It has been stated that the present system of incorporation is largely a farce, a source of annoyance and distrust to legitimate inquirers, business interests, supply and wholesale firms and others. The question arises is it not about time for a change to be made and some status, prestige and individuality attached to new bodies other than an artistic or euphonistic corporate cognomen.

The head of a large mercantile corporation with regard to come chartered concerns or limited liability bodies, said in a recent letter to the "Canada Lumberman":—

"This has been a matter which has worried the life out of us for years. The bulk of the corporations have provisional directors which are merely "dummies." In most cases when we investigate such an incorporation, in a week or two after the notice appears, the trail leads off to a law office. We are informed that they have obtained a charter, etc., but that they are acting for other interests and decline to give particulars until matters have progressed a little further. Only where incorporation is converting a partnership into a charter company and the old concern is well-known, do we know the significance of the old charter.

"It is doubtful if any agitation with the Government to compel giving more data with the incorporation, would have any effect. The attitude of provincial administrations seems to be that if any concern gets a charter and does not care to function with it immediately but may require six months or even a year before getting into action, it is perfectly alright. It is really too bad, though, that this incorporation matter cannot be improved."

What the manager of the mercantile agency says is correct. Admissions obtained from lawyers regarding the personnel or officers of a company are neither illuminating nor interesting. One of these "figureheads" from whom data with respect to a new firm was courteously sought the other day, replied:

"This firm is acting as solicitors for the—, and my name has been merely used for the purpose of incorporation. I know nothing whatever about the company beyond the purely formal matters which have come to my notice during the course of the preliminary meetings. Any information which I obtain, I do not feel free to publish due to the fact that it is secured in my capacity as a solicitor in this office, etc., etc."

Enough said! The average inquirer might as well try to break through a barrage or make an expeditious exit from a mystic maze. Frequently, it is "corporate confusion worse confounded."

### Courtesy as Vital Business Asset

"How much time, money and effort are involved in trivialities," was the observation of a cynic the other day. When pressed for an elucidation of his rather cryptic remark, he deplored the fact that in hundreds of letters sent out, telegrams despatched and requests, verbal and otherwise, there were too many insertions of what he called "superfluities." These, he went on, were the introductory "Dear Sir" when "Sir" would be more pointed, and the concluding "Yours faithfully" or "Yours sincerely" when "yours" would answer the purpose. Then he added there was no necessity of putting a prefix or an affix to every man's name, such as "Mr." or "Esquire." When asking anyone in your service to perform a simple task it would be quite as easy and reasonable to eliminate "please" and "kindly" or "thank you," taking it for granted that these little acknowledgments were quite in the order of things and indirectly implied.

On the other hand there is the effusive and fulsome gentleman, who goes to the other extreme and by an excess of urbanity and fluency, pours out adjectives and gratitude galore. He is altogether too gushing, demonstrative and cordial, so much that one is inclined to call into question his sincerity or genuineness.

There is a happy medium and that is what should be expressed in all business relations. The gruff and the abrupt are never welcome and, on the other hand spontaneous and highly emotional expressions often create a feeling that one, who makes use of them, is not real or true. There is no doubt that courtesy is a great asset in business. It smooths the wheels of everyday transactions and builds up kinder and better relationships. It is an element that is often lacking, and such organizations as the Rotary, Kiwanis and other forward movements, have done much to make commercial transactions more pleasant and agreeable.

The use of the word "please" "thank you," "pardon" "appreciate" and other like salutations or acknowledgments is not a case of love's labor lost. One can never tell when such bread cast upon troubled

waters will return. Its effects may not be immediately seen but it exerts an influence nevertheless. There is a wide difference between a real and spurious courtesy. The one is innate and ingrained while the other can be instantly detected when the veneer or gloss is scratched. Urbanity is something that everyone can practice and nowhere has it found a more ready expression and general acceptance than in the management of the largest hotels in Canada and the United States, in big executive offices and in high-class theatres and in national service organizations like the Bell Telephone Company, particularly on the part of the lady operators.

It will be noticed that the men, who are regarded most highly in the lumber arena, are those who are uniformly kind and considerate, and, in addition to integrity and worth, are thoughtful of others. Courtesy illuminates the intercourse of life, whether it be with a baron or a bell boy, a capitalist or a chauffeur, a president or a pedlar. It is not a garment donned for the occasion; it is not a mere assumption or sudden appropriation but is natural and honest. Like many a worth-while possession in the material world, it is free from adulteration. As one authority puts it, courtesy costs nothing but a wish to be kind, and, being so cheap, it should be plentiful. It is a commodity that is always quoted at its fact value—frequently at a premium—and brings regular, recurrent dividends in service and satisfaction.

### Closer Co-operation in Trade Relations

Trade relations between wholesalers and retailers in the lumber arena is chiefly a matter of goodwill. Besides the inevitable differences of opinion which constantly arise between buyers and sellers as to the quality of stock, there is the vexed subject of the limitations of the trade spheres of wholesalers and retailers, particularly in towns and cities. This is complicated somewhat by the operations of a class of men who are neither wholesalers nor retailers—peddlers of lumber with practically no responsibility and without offices.

The limitations of trade are difficult to define absolutely, chiefly because any agreement between representatives of the wholesalers and retailers cannot be made binding on the entire trade. A man is free to sell to whomsoever he pleases and nobody of his fellow-traders can compel him to restrict his customers to a given group. At the same time a great deal can be accomplished in the way of an understanding between the representatives of both sections, and it is in this connection that the spirit of goodwill and compromise comes into play. If there is a determination by each section to insist on what it considers its strict rights, the result will probably be chaos, the development of friction, and the loss of legitimate profits to all concerned. Trade organizations can and do exercise a strong influence in averting and remedying such conditions by mutual concessions and by coming to a better understanding on this and other questions.

### Why do Older Men Quit Jobs?

Why do men of various ages quit their jobs? Is it through unsatisfactory working conditions, not sufficient remuneration, general ineptitude or the restlessness, selfishness or mutability of human nature? The subject comes up for discussion every now and then and, at the recent convention of retail lumbermen at Windsor, Ontario, there was one live topic which aroused much interest. That was apprentices for planing mills and factories. One western dealer expressed the conviction that lumbermen did not make their plants sufficiently attractive to the young man, and that when vacancies did occur, the proprietor frequently advertised for experienced help rather than boys. Woodworkers would never, he said, solve the problem until they have put themselves into the position of the lads and give them a chance.

Another problem which was debated lately was why middle-aged men quit work. An investigation was conducted by Dr. Kitson, Professor of Psychology at the Indiana University. He made an extensive inquiry into the service records of 2,500 furniture men and other workers who had quit their jobs. Some of Dr. Kitson's observations are decidedly interesting and afford new viewpoints of why men of 35 to 45 years make so many shifts.

"Those men between twenty-five and thirty-five remained on their jobs for a relatively long average time. This is easily understood, because at this age men are usually rearing children and paying for a home, and economic responsibilities are pressing heavily upon them."

"As would be expected, there was a still greater stability on the part of those over fifty, who realize that they would have difficulty in securing another job."

"Between the ages of thirty-five and fifty the investi-

gator did not find the conditions that you would expect at first thought. It would seem that the period of service would increase regularly with increasing age. Contrary to this, we find that at the age of thirty-five the length of the period of service decreases and reaches a minimum between forty-one and fifty. This means that the last named period seems to be a very critical time when the workers give up their jobs with unusual frequency."

"Does Dr. Kitson offer any explanation of the probable causes of this critical age period?" was asked.

"Yes, he suggests three possible explanations," I told him. "In the first place, by the time the laboring man reaches forty, his children are usually old enough to take care of themselves or at least to give material aid in supporting the family, and thus the father may feel a greater degree of freedom in leaving one job to seek another. Then, as a man nears forty, he realizes that the period of declining strength is not far distant; and he feels the necessity of providing for his old age. If he sees no future possibilities in his present job he may leave it to seek employment elsewhere. The other explanation suggested by Dr. Kitson is that there are possibly some deep-seated physiological changes within the man himself."

In view of the reasons why middle-aged men leave their industrial jobs, it would seem to be good policy to put forth some added effort for holding them at work, says one authority. There are several things that might be done to accomplish this. A vigilant eye should be kept on the men who should be watched for any sign of restlessness or irritability. When these symptoms of the critical age appear, they should be considered with a great deal of care. Another remedy suggested is that men might be given a change of job within the plant, added responsibility, more money or some goal to work for, such as the promise of a better position in the future. It has also been proposed that a prize might be offered by industrial establishments to everyone, who is 50 years of age and yet has been in the service of the company for, at least, 15 years.

It is declared that, unless something like this is done, that changes will still go on constantly among older employees. It is important for the continued stability and strength of the ordinary industrial establishment that middle-aged men should be retained in the service for their wisdom, weight, counsel and skill.

The subject is one that is well worth thinking of and might be a co-related issue with the other one, already mentioned, of securing and training apprentices for planing mills.

### The Wonderful Growth of Famous Tree

The Redwoods of California exist nowhere in the world but on the Pacific Coast, from the southern border of Oregon southward to about twelve miles below Punta Gorda, Monterey County, California. They form, in reality, a narrow forest belt, always within the influence of sea fogs, and rarely extending more than twenty or thirty miles from the coast or over 3,000 feet above sea level.

California Redwood shares with the sequoia or "Big Tree" of the Sierras, the distinction of being the oldest living things in the world. It grows to gigantic size, being from 200 to 300 feet in height, and from 12 to 15 feet in diameter. In fact, in some cases the trees have a diameter of 20 feet and over at their buttressed bases, and attain a maximum height of nearly 400 feet. These species are as a rule very long lived. Several trees have been felled that were over 2,000 years old, while some had weathered the storms and droughts of thirty centuries!

Great sawmills have been built to convert these huge Redwood trees into lumber. Some of the logs weigh as much as forty tons and must be split by dynamite before they can be handled in the mills. Nature has been so lavish in her gift of Redwood timber that it will take all of the mills now in operation from 60 to 100 years to deplete the supply, although a large part of this reserve is today commercially inaccessible. And by that time, intelligent handling of the forests, which is already being applied, will provide a second cutting, for the Redwood stump never dies. It lives to raise a new family that a new family that grows around the stump as "Shoots" or "Sprouts," which grow rapidly to merchantable size. The trees of today stand in family circles of three to five trees, showing plainly that centuries ago they were mothered in the same way. Propagation by seed is unnecessary.

Redwood forests are immune from fire. Moreover, after the trees are felled, trimmed and sawn into logs, the tops, branches and undergrowth are given a chance to dry and are then set on fire to get rid of the bark and give a clean forest floor for removing the logs. Redwood logs lie in this hot fire until it consumes the "slash" or rubbish, yet they do not burn.

# Will Science Show Way to Prepare Wood for Human Food?

It is refreshing to note that the legislators in the Canadian House of Commons are beginning to wake up to the value and importance of Canada's forest resources, says the Quebec correspondent of the "Canada Lumberman." It would appear from the short discussion which took place in the House last month that the members were altogether startled over the great devastation by fire than any other agency. The insect plague, which has done and yet destined to cause more destruction than the forest fires, was not even mentioned. The great necessity of conservation was not even thought of, though it is an all-important question. Here in Quebec where the greatest precaution is being taken by the department of Lands and Forests to guard against destruction by fire and a constant study being made to cope with the insect pest, the question of conservation is also preached without much apparent success.

Canadian lumbermen, discussing conservation of the forests with your correspondent, point out that there is little or no forest conservation these days because the letter and spirit of the law is violated by the permissions given the big interests with a pull to cut and recut whenever they so desire. If the government desire to propagate and enforce a law of conservation of the forests, the lumbermen say the Government must take a determined stand against the granting of permission to the big interests whose motto is—"To-day we live. Those who come after us, must take care of themselves."

## Scientific Importance of Wood

If the federal and provincial legislators in Canada had given their time and thought to the valuable importance of the forest resources of Canada in the past, Canada would, without doubt, have to-day more scientific men and methods engaged in the Canadian forestry industry, and not one branch of a tree would be wasted. Though it may seem almost incredible, there is a fairly sound basis for the belief that science will yet show the way to prepare wood for consumption as human food before many years have passed.

Floyd W. Parson, the well-known scientific authority, in a recently published article on the progress of science, makes the statement that the American forest service is delving into the problem of nutritive properties from wood. Some of the chemical experts insist that it is entirely reasonable to expect that wood cellulose will

one day be converted into starches that will be capable of being assimilated by the human body. So much has happened to astonish the peoples of the world, in recent times, that we are prepared for the thrilling news that our chemists have made it possible to utilize our forests as a source of food supply, not only for livestock but for human beings as well. The outlook is that from now on science will make life one unceasing revolution."

Out on the American Pacific Coast, scientists are experimenting in the manufacture of a high-grade paper that is made from the stems and leaves of Swiss chard, a plant that matures in three months. The Swiss chard yields a high percentage of cellulose, and the paper produced is equal to the finest Japanese parchment and is particularly adapted for engraving and drawing as well as for book paper.

## New Kind of Artificial Wood

Hundreds of waste materials, which formerly had no uses, are now being employed in the manufacture of valuable products. A mixture of sawdust and ashes is now being utilized in the United States to make a composition which is a splendid substitute for cardboard and wood. The sawdust and ashes are treated chemically and the dry powder which results is run through presses. Boxes made from this composition are not only washable but are waterproof and fireproof. This artificial wood can be made as pliable as cardboard or as hard as oak, and, it is said, will neither shrink nor expand. Investigators in Australia see an opportunity to utilize the large quantities of mountain green available in their country in the making of newsprint.

Scientists are beginning to realize the great and valuable properties in forest resources and it is about time that Canadian legislators in the Federal House of Commons and Provincial Legislatures should come to devote their attention to the vast value of Canadian forests, and encourage in the Dominion scientific forestry and chemical researches in wood as well as forestry protection, by conservation, prevention of fire and insect ravages, etc. The Quebec Department of Lands and Forests is making great headway in forest protection but still lacks a school of scientific chemistry for investigation into the possibilities already outlined.

## Getting Ready for Imperial Forestry Meet

Four or five matters of interest to the lumber trade were discussed at a meeting of the Executive Council of the Canadian Pulp & Paper Association held in Montreal recently.

Ellwood Wilson, of the Laurentide Company, was appointed to represent the Association at the Imperial Forestry Conference, to be held at Ottawa during the summer. Mr. Wilson will appoint his own associates.

A grant of \$1,000 was made to the Woodlands section to assist the development work of the section.

The Executive endorsed the resolution passed by the Canadian Lumberman's Association at its annual convention, asking the Dominion Government to enact permanent legislation pertaining to the manufacture and sale of oleomargine in the Dominion of Canada so that the Canadian people will not be deprived of a healthful and nutritious food which is at present manufactured under the inspection of the Dominion Government.

It was decided to send to the Government a protest against the proposed removal of the Forest Products Laboratories from Montreal to Ottawa.

G. Piche, chief forester of the Quebec Government, explained to the meeting the scope of the paper-making school proposed to be established by the Government. The Executive, after hearing Mr. Piche, endorsed the scheme and appointed a committee to co-operate with the Lands and Forests Department.

## Record Building Boom Across Border

The United States is experiencing a record spring building boom. Despatches from cities in all parts of the country showed that building permits are being issued on an unprecedented scale. The greatest increase is in apartment houses. Dwellings come second and business structures are a close third.

Compared with the first two months of last year, January and February show an enormous increase. Reports indicate that the buildings going up and those about to be constructed, are of a more

expensive sort than those erected during 1922. Figures for the amount of money involved, in relation to the number of permits taken out, are much larger.

Building conditions are greatly improved in every part of the country and wage disputes are nearly all settled in the building trades.

In Detroit 3,500 permits have been taken out to date this year, involving the sum of \$15,012,829. These permits include 73 apartment houses with a capacity of 972 apartments. Two \$4,000,000 hotels are under consideration.

An increase of about \$3,000,000 is shown in Atlanta's building program for two months. This year's figure is \$5,317,669.

New York City's figures for January and February are: Permits 9,361, cost \$142,305,040. This gives an approximate cost per permit of \$15,200. Great number of the permits are for small houses and bungalows in Queensborough.

In Philadelphia 2,904 permits have been taken out since the first of the year, involving estimated cost of \$17,418,560. This is more than \$4,000,000 over last year's estimate for the same period. About half the permits are for homes.

## Heavy Building Program in Ontario

Quite a little building activity will be created in the various provinces by the carrying out of the work authorized by the present legislative sessions. In Ontario the list is headed by \$2,730,695 for education, including grants of \$400,000 to the Western University for buildings; Queen's University, \$210,000; Queen's University Library, \$75,000; University of Toronto, \$880,000; College of Education buildings, Toronto, \$100,000. Maintenance of public buildings calls for the spending of \$211,972. New construction on the hospitals at Orillia, Whitby and Woodstock has been covered by grants of \$125,000, \$100,000 and \$120,000 respectively. Under the head of "capital expenditure by the Hydro-Electric Power Commission," the supplementary estimates carry items totalling \$9,850,000 for expansion of the Niagara system.

# What is Going on in East in Lumber Industry

According to a report issued by Hon. C. W. Robinson, Minister of Lands and Mines, in the New Brunswick Legislature recently, there were no serious forest fires in the Province of New Brunswick during 1922. This, he attributes to the fact that, when the country was becoming dry during the heat of the summer, heavy rains lessened the menace and together with a well directed fire fighting force enabled fires, which might have been serious, to be controlled and eventually put out. He also pointed out that the fire law, as amended, was favorably regarded by the public and worked out to the satisfaction of the department. This law provides that where fires are burning on private lands there is no onus on the part of the Government to put out these fires. The responsibility of suppressing fires of this kind is now placed on the County Councillors, who are authorized by the act to call out the necessary force from time to time as may be required. There were a few complaints that the new act would be a hardship to the settler, who had to turn out without pay, but, when it is taken into consideration, that the settler was fighting to save his own home and property there was little argument left that he should be remunerated as well.

The construction of more fire towers was carried on during the season of 1922. All these towers have telephone connections and cabins for watchmen. The Minister pointed out that these towers are of incalculable value and recommended that more of them be constructed until the whole province is covered. He maintained that the construction of towers and woods telephones is giving the best value of any form of expenditure for suppressing forest fires, pointing out that they are manned by experienced men who are provided with binoculars and alidades as a means of determining the size and location of the fire. The telephone also provides a means of speedy communication with the Department where fire fighting crews can be quickly organized and can be rushed to the scene of the conflagration in a very short period of time. Hon. Mr. Robinson emphasized the fact that there never was a time, perhaps, in the life of the New Brunswick forests when greater danger existed than at present and when more was at stake in the preservation of the largest source of the provincial revenue.

In another part of his report to the Government Mr. Robinson explained that the falling off in revenue for the year was largely due to stumpage, which, he explained, was caused by the allowance that had to be made on account of a large proportion of timber being injured by the spruce bud worm and consequently rated at a lower stumpage. The quantity of lumber cut was very close to the estimate of 100 million superficial feet. He expressed an opinion that a better year is indicated and that a large revenue should be forthcoming from the Crown lands. He emphasized the fact, however, that there are serious problems to be faced and worked in connection with the administration of the Crown lands. He said he referred particularly to the calamity that has befallen the province through the destruction of the forests by the spruce bud worm and the evil of forest fires. With reference to the bud worm "it is a matter of congratulation," he added, "from all that can be learned, the worst of the attacks is over although this injurious pest is still with us but in diminished degree."

The Minister of Lands and Mines pointed out that the policy of the department is to encourage the cutting of the dead and dying lumber left in the wake of the bud worm at one half rate of stumpage as fixed by Order in Council, but even at this low rate it is feared that only a small fraction of the total stand attacked will be salvaged. It is estimated that in the vicinity of 215 million superficial feet will be cut on Crown Lands during this logging season and, of this quantity, probably sixty per cent will be bud worm killed and so subject to the half rate of stumpage. Should this be the case, Mr. Robinson pointed out, the revenue from stumpage would work out about \$630,000 or a gain of sixty per cent over the revenue from this source in 1922.

In a report recently presented to the Department of Crown Lands by the Forest Survey Branch it was shown that considerable progress was made during the year when 484,000 acres were examined and reported on by the Forest Engineers and 588 miles of line run. It was shown that to date 58.7 per cent of the Crown Lands, estimated at seven and a half million acres, have been completed by this survey.

The report showed that the best lands for timber growth were those surveyed during the past season situated on Nepisiguit and heads of the Tattagouche, South East and North West Upsalquitch,

where very little waste land is reported. On a track of this locality of 514,000 acres the foresters reported per acre:

- 2 ¼ cords undersized (to 6 inches)
- 5 cords merchantable lumber
- 2 cords dead fir
- 5 ¾ cords hardwood.

This shows fifteen cords to the acre or 7,549 superficial feet to the acre, representing nearly 4,000 million feet. This is said to show the great value of some of the Crown Lands in New Brunswick. Figuring the value of the merchantable softwood lumber alone on the above tract viz. spruce, pine, cedar, fir and hemlock, not including the dead fir, the result would be 1,285 million superficial feet, which at a moderate stumpage of \$4 per M. would realize over five million dollars.

Conditions in the lumber and pulpwood business have improved to such an extent that the time is ripe to begin active operations was the message given out recently by members of the Pejeboscot Lumber Company. They said that they are planning on getting out 20,000 cords of wood and 5,000,000 feet of lumber in the season of 1923-24. When asked regarding their winter activities they said that heavy snow fall had greatly impeded operations, but now that conditions are improving they are sending another crew into the woods and hope to get out, at least, two-thirds of their intended cut. With reference to their mills they expect to get the one at Great Salmon River started during this month from which they hope to ship out approximately 8,000 cords of pulpwood and 3,000,000 feet of manufactured lumber. Next season's logging operations will be started in August when they will begin cutting 10,000 of pulpwood on Great Salmon River, and 10,000 on Irish River. 5,000,000 feet of lumber will all be cut on the Great Salmon River.

A pioneer United States lumber industry in the city of St. John was recalled recently by the death in Easthampton, Mass., of Franklin W. Pitcher, who for many years was a member of the firm of Jewett & Pitcher. This firm did an extensive business in St. John where the Canadian headquarters were located.

A recent report from Edmundston, N. B. said that lumbering was practically at a standstill on account of the lack of snow, while in Kent, Kings and Queens counties activities were discontinued many weeks ago because of the unusually large quantities of snow. Never before in the history of these counties was there such a contrast. In some of the more southern counties over 120 inches of snow fell on the level, but during the storms was drifted into regular hills. Hauling was impossible and operations had to be discontinued.

Word was received in St. John on March 19 that Cooper's portable saw mill in Blackville, N.B., was destroyed by fire. The mill had been equipped with new machinery and the loss was heavy.

Late reports from lumbering districts of the province of New Brunswick continue to be encouraging and the outlook is bright for a busy season. It is anticipated that the United States market will be brisk this spring and summer, because of reports saying that building operations will be extensive.

Four lumber mills in Dalhousie are expected to resume operations as soon as the ice runs out of the river. Two mills in Dalhousie were idle all last year and a shingle mill there has not been run for two years. All three are expected to be in full operation this season.

The Fraser Companies Ltd. anticipate a busy season at the mill located at Chatham Head as well as at their plants at other points.

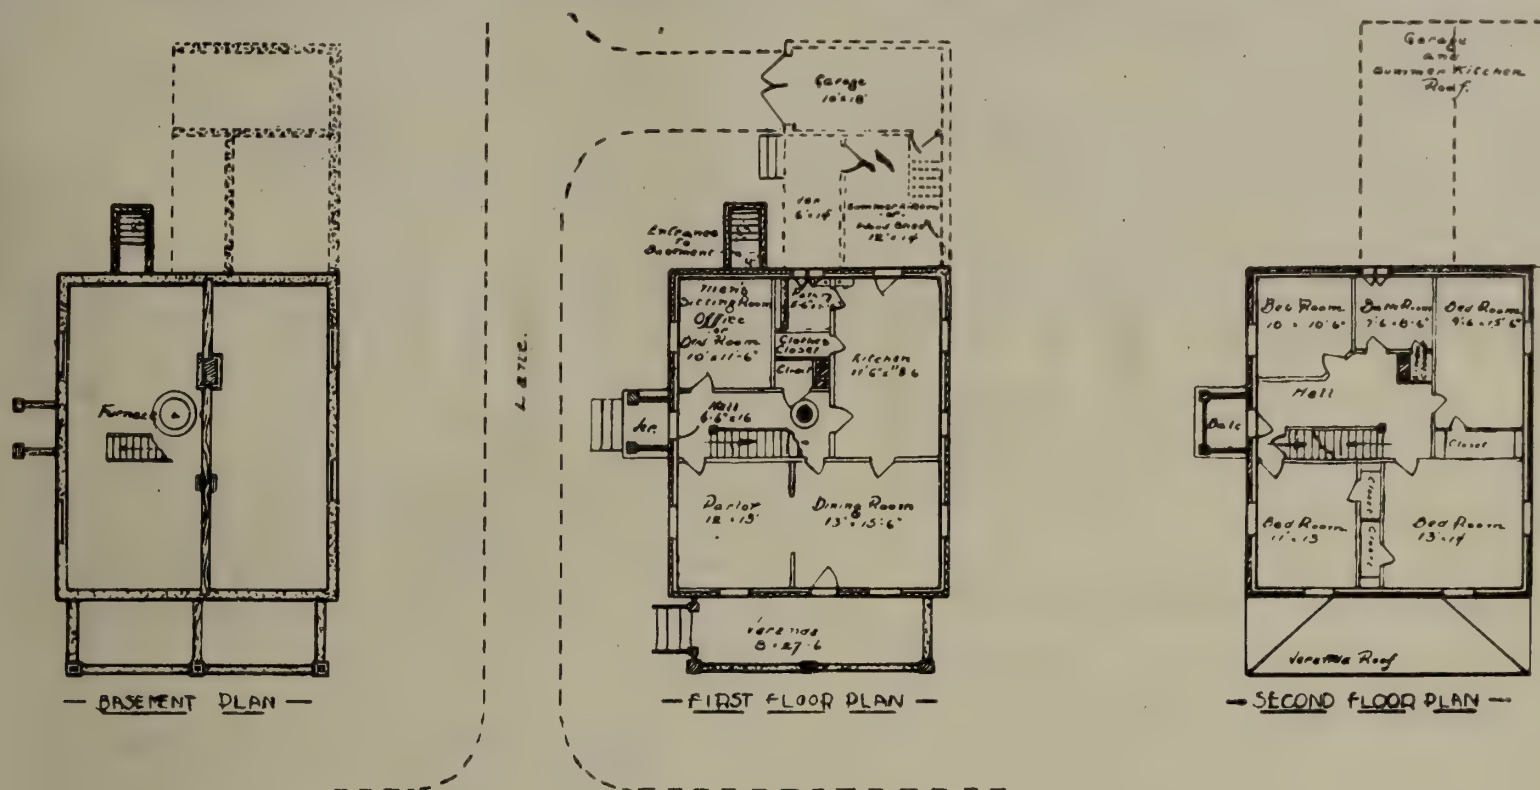

Despite the extremely hard conditions brought on this winter by the heavy snow fall and repeated storms, C. N. Vroom, of St. Stephen, has operated his lath mill at Moore's Mills and has turned out approximately 2,000,000 laths.

It is reported that W. P. Lowell of Galais, Me., is contemplating operating a mill at Rock Gulch. He is said to be planning on sawing 2,500,000 feet of spruce and a large quantity of laths.

Dividends on both Brompton preferred and common will be resumed at the earliest possible date, was the assurance given by President F. N. McCrea, M.P., at the annual meeting of the Brompton Pulp and Paper Co. The president, whose first public appearance it was after a prolonged illness, was in an optimistic vein, and told the shareholders they need have no doubts regarding the future prosperity of the concern. He had only to refer them to the annual report, that spoke for itself. The prospects were altogether exceptional in every branch of the business, including the two American subsidiaries.

# An ideal farmhouse which meets every rural need

J. B. Mackenzie, of Georgetown, Ont., is a retail lumberman who believes in getting out after business. He carries out contracts, large and small, and prepares plans and specifications for structural jobs. He has drawn plans recently for what is known as a model Ontario farm house, and has inserted in the local papers of his district an advertisement showing various elevations and sectional views. Mr. Mackenzie announces that he mails this plan free to farmers, carpenters and builders, and states that he is receiving many inquiries from the advertisement which is accompanied by the following self-explanatory reference:—

There are several good features to be considered in the plan of this house. The main feature is that it is large,

roomy and compact, and is specially designed for a pipeless furnace. It has side entrance from lane, into a large hall, which enters all rooms. There is also a hat and coat closet off this hall, which is very convenient. The kitchen is extra long and very suitable to accommodate large crew during threshing season. There is also a nice size pantry, in which there is a large cupboard. This is very handy and will appeal to the housewife. There is also a clothes closet off the kitchen which is another great advantage. There is a nice room, extra bedroom or office which every farmer should room off the hall, which may be used as a men's sitting

have. Provision is made for additional woodshed and garage, both under the one roof. There is a full size basement with outside entrance as well as inside. The front verandah is spacious and so constructed that with adding sash, it may be converted into a sun parlor or sleeping porch.

The second floor has four large bedrooms and a bathroom, all entering into large hall, which leads to balcony situated over side verandah. There is also a linen closet off the bathroom which is convenient.

There is a large attic in this house, with a good easy stair. This attic is very suitable for drying clothes during the winter months, and with the stair entering in the centre, and a window in each gable end, this attic can be very easily converted into two fine extra sleeping apartments.

Taking everything into consideration, this is a very well got up plan, and is specially designed for the Ontario farmer. Examine this plan carefully, but bear in mind, though, that this is only a sketch plan. We have large working plans drawn to  $\frac{1}{4}$  inch scale, with details, which we supply for \$10.00 per set.

We have a planing mill and sash and door factory, with very up-to-date machinery. We are specially equipped for the manufacturing of sash and doors, also finish, and should this plan appeal to you, we would be pleased to submit a tender for the supplying of all woodwork, finish, sash and doors, delivered to your nearest railroad station.

### Fair Hardwood Cut in Southern Counties

The London Lumber Co. Limited, of London, Ont., of which F. E. Harley is president, say there has been a fair amount of stock cut by farmers and small millmen in the southern counties of Ontario, such as Elgin, Norfolk, South Oxford and Haldimand, but not nearly as much, however, as before the slump in 1920.

In regard to values, firsts and seconds and select grades in thicker stock, such as 8/4, 10/4 and 12/4 maple, soft elm and birch, prices have advanced somewhat during the last couple of months. This is, of course, for stock suitable for shipment to the American market and is caused by the demand in the automobile trade, 4/4 sidings in No. 2 common and better grade, 4/4 log run stock and lower grades in 4/4, No. 2 and No. 3 common, however, are not in demand at all and prices have continued very low. This can be accounted for, too, to a large extent owing to the fact that Canadian factories have not been doing anything like the business that some of the larger concerns in the United States. The demand, therefore, as we have found it in the last couple of months, has been with the better grades and thicker stock. There has not been a great deal of winter sawing in the southern counties.

The millmen are not holding off sale of what stock they have but seem to be quite willing to negotiate. The reason for this seems to be that they feel that, with conditions as they are, it is better to sell early, no doubt believing that there may be a runaway market.

### Breezy Paragraphs in Short Shape

W. J. Van Dusen, of the H. R. MacMillan Export Co., Vancouver, spent a few days in Toronto recently on business.

The Conger Lumber Co., of Parry Sound, Ont., has sold its cut of 3,000,000 feet of hemlock logs to J. Harrison & Sons, Co., Limited, Owen Sound.

K. J. Shirton, of Dunnville, president of the Ontario Retail Lumber Dealers' Association, spent a few days in Toronto recently on business.

A. E. Gordon, of the A. E. Gordon Lumber Co., Toronto, who has been spending the past few weeks in Cuba, is expected home in a few days.

W. H. Cote Lumber Co., Limited, of Montreal, have recently become members of the National Hardwood Lumber Association, Chicago.

L. L. Brown, B. C. Lumber Commissioner, who has been spending the past three months in the East on business, has returned to Victoria.

The Montreal Wholesale Lumber Dealers' Association and the Montreal Retail Lumbermen's Association have passed resolutions in favor of daylight saving for the city.

The Montreal Retail Lumbermen's Association has established a credit bureau as a protection for their members against doubtful accounts.

D. H. McLennan, chairman of the Montreal Lumber Association, has been elected vice-chairman of the Transportation Bureau Committee of the Montreal Board of Trade.

A. C. Gordon, of Toronto, chairman of the Wholesale Lumber

Dealers' Association, attended the recent annual convention of the National Wholesale Lumber Dealers' Association in Pittsburg, Pa.

A decree has been issued by the Provincial Government closing the forests of the province of Quebec from April 1 to November 15 of the present year. Those wishing to go into the bush during that period will have to secure a permit. The closing of the forests is a measure of protection taken by the Government against fires.

A. C. Perrin has joined the inspection staff of the National Hardwood Lumber Association, Toronto, and entered upon his new duties. He has been in the service of the Association for a number of years.

The Soo Lumber Co., Sault Ste. Marie, Ont., will start work in the near future on an one storey, 30 x 80 addition to their mill. The new building will be of brick and tile construction and the cost is estimated at \$12,000.

A. L. Clark, president of the Vancouver Lumber Co., Vancouver, and former president of the Southern Pine Association, was a recent visitor to Toronto and Montreal. Mr. Clark, who is one of the leading lumbermen of America, says that business in the West is booming and is likely to be active for a long period. He spoke most enthusiastically of the large export trade that is being done.

Ezra Fahner, who has been with the R. E. Butler Lumber Co., of Woodstock, Ont., for several years, has completed the purchase of the lumber yard of Walter Mitchell at Port Stanley, Ont., and has taken possession. Mr. Fahner has had eleven years' experience in the wholesale and retail lumber line, having been connected with the George N. Kernohan Lumber Co., of London, for seven years before coming to Woodstock. He will conduct the business in Port Stanley under the name of the Fahner Lumber Co. Many friends will wish him every success in his undertaking.

### Midland Firm Buys Biscotasing Mill

Pratt & Shanacy, of Midland, Ont., have purchased the sawmill, general milling outfit and timber limits of P. & J. Shannon at Biscotasing, Ont. The property is on the main line of the C.P.R. about eighty miles west of Sudbury. The plant has a capacity of about 10,000,000 feet annually, and there is ample piling ground with all the necessary shipping accommodation. The limits comprise four berths, chiefly white pine, on the upper Spanish River, and it is estimated there is enough timber to keep the plant running for the next ten years. As no logs were left over from last year, the mill will not be getting under way until the end of June, and, in the meantime, Pratt & Shanacy are making some extensive alterations, having purchased a double cutting band mill from the Waterous Engine Works Co., of Brantford, which is being installed.

The head office of Pratt & Shanacy will remain at Midland. At Biscotasing there is a general store, post office, blacksmith shop, machine shop, etc., which were acquired by Pratt & Shanacy.

### Underwriting Company Opens Toronto Office

The Lumbermen's Underwriting Alliance, of which the U. S. Epperson Underwriting Company of Kansas City, Mo., J. J. Lynn, general manager, is attorney-in-fact, has been extending fire insurance indemnity exclusively to the lumber trade. An office has been opened at 546 Confederation Life Building, Toronto, which is in charge of Mr. L. D. Payette as chief agent for Canada.

The Exchange's subscribership and insurance in force has increased considerably in the Dominion during recent years, a good percentage of the \$125,000,000 insurance in force and 1,225 risks insured being in Canada. The Canadian branch, as stated, is under the direction of Mr. Payette, who is a former resident of Penetanguishene, Ont., and a brother of J. T. Payette, Mayor of that progressive town. Mr. Payette spent a number of years at the head office in Kansas City, Mo., and is widely known in the lumber industry. For the last two years he has been living in Toronto and, under his supervision, the requirements and interests of Canadian subscribers are given prompt and careful attention.

### Much Hardwood Cut in the East

Douglas A. Stalker, wholesale lumber dealer of Sherbrooke, Que., says things are progressing very prosperously in the lumber line in the eastern townships. There have been good average cuts of hardwood taken out and prospects for increased business are very evident. The farmers and small millmen have taken out big stocks this winter.

As regards pulpwood prices, Mr. Stalker says these are now low but as soon as some water is obtained for the mills which have been sadly handicapped in this respect for some months, he expects that quotations for pulpwood will strengthen.

Official photograph taken by the Air Board, Ottawa, of the Roberval Air Station in the Province of Quebec

### Northern Alberta is Free From Fires

In general the forest fire situation at the present time is satisfactory, as far as can be learned from the fire ranger's reports, says Colonel R. H. Palmer, chief of the forest service for northern Alberta. In a number of different locations the open weather season finished with ground fires burning in the timber, as a result of the summer's conflagrations but during the winter the rangers have been engaged in following up the fires smouldering under the snow and digging them out.

The large timber limits owned by General Stewart on Snipe Lake, which lies southwest of the Lesser Slave Lake, are now clear of fire, while the timber at Sturgen Lake, further west, is also reported safe. Three men have been engaged all winter in digging out burns in the timber on the South Wapiti and Simonette Rivers, south of Grande Prairie, and these areas are reported as being under control.

### Mageau Lumber Co. Will Be Busy

The Mageau Lumber Co., of Field, Ont., in a recent letter to the "Canada Lumberman," state that their log output this winter will be 75 per cent greater than it was a year ago and they consider the outlook for the lumber trade in 1923 as very fair. They have no stock left over at the present time and that the volume of trade in 1922 was greater than that in 1921. Profits as a rule were better in 1922 than the year previous but the logs of the Mageau Lumber Co. had been carried over from the winter of 1920-1 and cost more than if they had been cut in 1921-2. The new mill of the company, which replaces the one that was burned last year, is about completed and will start operations within a few weeks.

### Muskoka Wood Going Ahead Steadily

The Muskoka Wood Mfg. Co., of Huntsville, Ont., although visited by a fire early last summer cut pretty nearly as much lumber as in 1921, the output being close on to 5,000,000 feet, about one-third of which was hardwood. Owing to the fire and other causes, the company's stock at the present time is considerably larger than it was a year ago. Their log output will be 35 per cent higher than the previous season. R. J. Hutcheson, head of the company, says that since October prices have been constantly advancing in hardwoods and are still ascending. He considers the prospects for the lumber trade in the coming year the best since 1920.

### Wish That They Were The Horse

J. G. Levie, of W. & J. Sharples, Limited, of Quebec, who has been in Ireland on a business trip, sent from Belfast last month a clipping from one of the daily papers to the "Canada Lumberman," with the pertinent observation,—“Some of our Toronto timber friends will wish they were the horse.”

The reference is headed “A Scotch Horse's Half 'un,” and reads: After swimming for over an hour in Dundee Harbor a horse was hoisted on to a barge with block and tackle none the worse of its experience. It was given about half a pail full of whiskey when rescued, and taken to a stable in a float. Thousands on the quay witnessed the strange spectacle.

### Howe Lumber Company is Organized

H. E. Howe, Lieut. Col. R. M. Beckett, W. A. Home, F. W. Cotter, A. O. Bureau and A. E. Guillemette are associated in the formation of the Howe Lumber Company, Limited, of Three Rivers, which has acquired from the city of Three Rivers a saw and planing mill with about seven acres of yard room situated along the C.P.R. tracks.

Mr. Howe was formerly manager of the lumber department of the Belgo Canadian Pulp & Paper Co., of Shawinigan Falls; Lieut. Col. Beckett and Mr. Home are members of the firm of Dobell, Beckett & Co., of Quebec, for whom Mr. Cotter was formerly manager at Montreal.

The Howe Lumber Company, Limited, will conduct a general wholesale and retail lumber business and will also be open for orders for re-sawing and planing lumber in transit. They expect to have the mill in operation about the 1st of May.

### Predicts Consummation of Lumber Standardization

Herbert Hoover, Secretary of Commerce, predicted the “certain consummation of the vital standardizations and simplifications in lumber,” in a telegram to A. C. Dixon, President of the West Coast Lumbermen's Association, at Seattle, Washington. Mr. Hoover had been invited to attend the annual meeting of the West Coast Lumbermen's Association in Seattle. The text was: “The progress made at the recent Chicago meeting of the Consulting Committee of the Central Lumber Standardization Committee, indicates certain consummation of the vital standardizations and simplifications in lumber. Please express to your association the thanks of the Department of Commerce for the constructive work of the representatives of the Pacific Coast lumbermen in basic suggestion for equalization of grades, recognized nomenclature, and for their contribution to a definite and satisfactory settlement of lumber size and dimension standards.”

### Montreal Retailers Hang Up Signs

The members of the Montreal Retail Lumbermen's Association are now displaying in their offices two large cards, one in English and the other in French, stating: Montreal Retail Lumbermen's Association. We are members of the above Association, and as such, we are pledged to purchase our goods from recognized wholesalers and manufacturers only.

At a special meeting of the Montreal Retail Lumbermen's Association a vote of sympathy was passed to E. Gohier, on the death of his father, E. Gohier, of the firm of E. Gohier Fils, of St. Laurent, P.Q. The deceased was at one time mayor of St. Laurent.

### Record Logging By Sturgeon Falls Man

J. E. S. Martin, of Sturgeon Falls, Ont., contractor for George Gordon & Co. Limited, of Cache Bay, Ont., has just completed his contract, having cut and hauled seventy thousand pieces of pine logs on Temogami waters, with an average of forty men in six months. The average haul was a little over one mile, and everything with the exception of about ten thousand pieces, was hauled over grade. Mr. Martin has been in the business a long time and says it was the heaviest timber that he has ever had anything to do with, being very rough, second growth, bull sap white pine and averaging a little over forty feet to the log, Doyle rule.

# What the Lumber Trade is Doing in Canada

The Welch Lumber Co., 2219 Yonge St., Toronto, will start work shortly on a new mill building one storey 40 x 50 of brick construction.

Doolittle-Russell, Limited, Hamilton, Ont., are contemplating converting the property known as the Peoples Brewery in the north east end of the city into a builders' supply yard. The work will cost about \$20,000.

T. A. Paterson, manager of Mickle, Dymont & Son, Toronto, who was confined to the Western Hospital for some time, is making good progress toward recovery and is expected to resume his duties about the first of the month.

Bourassa-Clifford Corporation, Limited, Three Rivers, Que., is a new firm with provincial charter to manufacture and deal in all kinds of wood products. Capital \$45,000. E. Bourassa and H. Clifford, both of Three Rivers are two of the incorporators.

W. Rutledge, who lives in East Esquimes Township, Halton County, recently brought an elm log to the Georgetown Lumber Company's mill that cuts 900 feet of lumber. The log was 18 feet long and is one of the largest hewn in that district for many years.

The P. B. Yates Machine Co., of Hamilton, reports that business with them has been very steady for the past two or three months. They say that they are looking forward to a fairly busy season and are receiving many inquiries for planers, matchers, moulders and sawmill equipment.

Smith, Limited, Levis, Que., is a new firm recently incorporated with a capital of \$48,000 to conduct a general lumber business, manufacturing sash and doors and other wood products. Two of the incorporators are George C. Goodfellow and A. J. Smith, wholesale lumber merchants of Montreal.

At the annual meeting of the Timber Holders' Association of British Columbia for 1923, which was held recently in Vancouver, Mr. S. Logan was elected president; A. F. Sutherland vice-president, and W. McNeil secretary. Mr. McNeil is also secretary of the Timber Industries Council of British Columbia.

During the past season there were between 900 and 1,000 lumber camps in operation throughout Ontario, according to estimates made by Alex. R. White, of North Bay, Chief Sanitary Inspector. The number of lumberjacks employed in the bush during the winter is computed at 30,000 when all parts of the province are taken into consideration.

The Edgecumbe-Newham Co., Limited, of Vancouver, have appointed C. L. Frost manager of their sales department. The latter is a former member of the Frost-Carruthers Lumber Co. and is well known on the coast. It is the intention of the Edgecumbe-Newham Co. to greatly extend activities in the shingle line during the coming year.

Projects for the handling of pulp from New York establishments were discussed at a meeting of the Chambre de Commerce of Sorel, Que., held recently for the purpose of electing officers and discussing general business. Full assurance was expressed that the deep water of the Richelieu River from the St. Lawrence to the terminal at Sorel, could handle the pulp.

Hillyard Burns, a fireman, and J. Donohue, a brakeman, were instantly killed recently near Menzies' Bay, B. C. when they leaped from a runaway logging train in an attempt to save their lives. Four of the ten cars loaded with logs were derailed and the accident occurred when the locomotive on which they were riding became uncontrollable on the icy tracks.

Thurston Flavell, Limited, have purchased the B. C. E. R. Company's logging railway between Coquitlam and Port Moody, a distance of some ten miles. The price paid was \$50,000. The line was constructed when the dam on the lake was made and the lake raised to give the access to extensive timber limits at present in the hands of the Dominion Government.

Some fifty concerns engaged in logging operations in British Columbia are affected by the decision handed down by the Privy Council on Feb. 19, granting the Provincial Government the right to prohibit employment of Orientals in logging on Crown timber lands. According to a census taken two years ago, these companies employ approximately a thousand Orientals.

The Abitibi Transportation & Navigation Co. early in March set a record for themselves to aim at for the bringing in of pulpwood, when between the hours of eight in the morning and ten at night 64 cars containing approximately, 850 cords of pulpwood were delivered to the new slasher at Iroquois Falls, Ont. Five trainloads were necessary to bring in the cordage.

John J. Miller, of Toronto, who is a member of the Inspection and Rules Committee of the National Hardwood Lumber Association, was in Chicago recently attending an important meeting of that body. The annual convention of the Association will be held in Chicago on June 13th, 14th and 15th, and it is expected there will be a record attendance. G. S. Hill, of Chicago, assistant-secretary of the N.H.L.A., spent a few days in Toronto recently on business.

It is reported that the Whalen Pulp & Paper Co., whose head office is in Vancouver and who have mills at Wood Fibre, Swanson Bay and Port Alice, B. C., have plans under consideration for the manufacture of newsprint. It is believed that an interesting announcement will be made at the forth coming annual meeting regarding the extension and the financing plans for carrying out the work.

Owing to the large amount of work and business which will come up at the twenty-sixth annual convention of the National Hardwood Lumber Association at its next convention in Chicago, it has been decided to extend its duration for three days instead of two which has, heretofore, been the invariable rule. The dates of the next convention will be Wednesday, Thursday and Friday June 13th, 14th and 15th.

The lumber and woodworking industries of the United States represent an investment of \$12,000,000 and give employment to almost 1,000,000 men. For building construction we use 28 billion feet of lumber every year; for furniture, veneer products, wagons, automobiles and farm implements more than 1½ billion feet; for boxes and crates 4½ billion feet; and the demand for railroad ties calls for 3¾ billion feet.

The new planing mill of Graves, Bigwood & Co. at Byng Inlet, is now in operation and rushed with work. The mill which replaces the one which was burned down during a severe thunder and lightning storm last summer, is complete in every detail and has a capacity greater than the old one. The company are now in a position to supply stocks, sorted for use, in dry white or Norway pine. Graves, Bigwood & Co., expect to have their sawmill in operation by May 1.

William Chew, of Midland, and for many years engaged in the lumber and pulpwood industry in that town, died in Toronto lately after a brief illness. Mr. Chew was born in York County in 1847 and went to Midland about fifty years ago, he being one of the family of brothers who were so largely and so closely identified with Midland's pioneer industry, in the lumber industry. He is survived by a widow and one daughter.

Edward J. Lee, postmaster at Moor Lake, Renfrew County, passed away recently. He had been in poor health for the past two years. Mr. Lee was well known in lumbering circles being a contractor for the Hawkesbury Lumber Co. Previous to moving to Moor Lake in 1913, he lived for a number of years at Des Joachims where he was employed as a culler with the E. B. Eddy Co. He is survived by his wife, five sons and five daughters.

B. J. Bagan, of the Vigars-Shear Lumber Co., Port Arthur, returned recently from an extended trip through Western Canada and the Coast States as far as California. He found conditions good on the other side of the line and much building going on, in spite of the fact that material is higher across the border than it is in Canada. The greater part of the construction is confined to the erection of new homes. Mr. Bagan says that the outlook in Port Arthur for an active structural season is very fair.

Eric W. Hamber, of Hastings Mills, B. C., was re-elected president of the Timber Industries Council of British Columbia at the annual meeting held recently. P. D. Roe, president of the Eburne Sawmills Limited, is again vice-president, and W. McNeil managing-director. The other directors are,—J. D. McCormack, president of the B. C. Lumber & Shingle Association; H. H. Ross, President of the Mountain Mills Association; M. S. Logan, president of the Timber Owners' Association; G. G. Johnson, president of the B. C. Loggers' Association; J. A. Edgecumbe, president of the B. C. Shingle Manufacturers' Association.

F. N. Youngman, manager of the Thunder Bay Paper Co., Limited, Port Arthur, Ont., states that the new equipment which they have installed was completed recently and since that date the company have been producing 60 tons of ground wood pulp daily which is double the capacity of the old plant. The past winter has been a good one for woods operations and there has been a record production of pulpwood at the head of the lakes. The weather recently has been conducive to hauling and the majority of the pulpwood cut during the winter is now out and on the landings.

### Several Companies After Pulpwood Limits

The question of granting pulpwood and timber concessions of various companies is proving a live one in connection with the administration in Ontario. Some little time ago the Fort William Paper Co. made application for a timber limit in the Gull Lake area west of Lake Nipigon, covering approximately 3,000 square miles. In return for the grant, the company agreed to employ, at least, 1,000 men for a minimum of ten months in the year at the new plant in Fort William and to use 7,500 h.p. annually, developed by the Ontario Hydro Commission at Cameron Falls and to pay such bonuses and dues as are to be fixed from time to time by the Government. The company further agreed to double the capacity of the output. The addition is to be completed and the full amount of Hydro power in use not later than December 21st, 1925.

Premier Drury stated recently that the Government would not depart from its established custom of calling for tenders and thus having public competition in connection with awards concerning timber limits. Other companies have made applications for concessions, among them being the Thunder Bay Paper Co., of Port Arthur. This company is now a customer of Hydro, and at present has no limits. It is asking for holdings in the region east of Lake Nipigon, which does not conflict with the application of the Fort William Company. It agrees to build a large addition to its plant, use 7,000 horsepower purchased from the Cameron Falls Development, and have its mills in operation six months before the date mentioned in the Fort William Company agreement. A third company, the Nipigon Fibre Mill, is also applying for limits in the district, and is prepared to sign a similar contract.

The granting of all these applications would apparently meet with the approval of the representatives of the district. Zotique Mageau, M.P.P. for Sturgeon Falls, speaking recently in the legislature, emphasized the importance of securing an adequate supply of forest wealth for existing companies in the North.

### Bathurst Co. Appeals Court Ruling

The Bathurst Company, Limited, of Bathurst, N. B., has lost its appeal to the New Brunswick Supreme Court on the levy of the New Brunswick Workman's Compensation Board. The Board levied \$30,000 against the company. Angus McLean, the president of the Bathurst Company, Limited, refused to pay this sum, stating that the Board was too extravagant, and that most of the money levied on manufacturers went for paying salaries and travelling expenses of the Board rather than to compensation for injured workmen and workwomen. The Bathurst Company, Limited is expected to take further appeal to the Supreme Court of Canada, and if necessary, to the Privy Council.

### Abitibi Company Had Good Year

The annual report of the Abitibi Power & Paper Co., Limited, Montreal, has been sent out. The Company, whose plant is at Iroquois Falls, Ont., is turning out nearly 500 tons of newsprint daily. This is the largest unit of its kind under one roof in America. The company has been in operation for nine years and has in that time made great strides. The record for 1922 shows considerably large receipts despite the lower prices which prevailed during that year. Receipts are shown at \$9,461,297, as compared with \$8,861,810 in 1921, and \$10,580,142 in 1920. Expenses were \$5,846,462, as compared with \$4,183,637 in 1921 and \$5,537,009 in 1920.

This left a balance of \$3,614,837 from which was deducted \$929,123, representing bond interest and interest on bank loans, and \$803,391 for depreciation, as compared with a charge of \$989,762 to this account in 1921. The foregoing deductions left a balance of \$1,882,323 applicable to dividends and after deduction of \$70,000 for preferred dividends there remains available for the 250,000 common shares the sum of \$1,812,323. Payment of \$500,000 to holders of the common stock during the year left a balance of \$1,312,323 from which is deducted the sum of \$53,177 for adjustment of Government taxes, leaving a surplus for the year of \$1,259,146.

### Riordon Earnings Show Steady Improvement

It is understood that financial investors in Montreal who have all along been identified with the operations of the Riordon Company, Limited, are now prepared to provide the concern with funds to the extent of \$10,000,000. for rehabilitation purposes. If the plan proposed is carried through the greater part of the new financing will be offered to the present shareholders in such a way as to preserve for them the control of the properties. The 3,000 shareholders will be given every chance to safeguard their equities in the company.

Riordon Company, Limited, in common with other pulp concerns in Canada, had been able fully to establish the advance of \$10.00 a ton, which occurred last November. For over a year now the company's various plants have been operating at capacity, and the product has been sold, which must be considered satisfactory in view of the fact that most of the other pulp concerns on the continent are operating only between 60 and 90 per cent. of capacity. The company's product is well sold ahead. The earnings show much improvement in the last six months.

### New Plant is Producing Splendidly

E. J. Jones, late of Bradford, Pa., has been appointed general manager of the Spruce Falls Co., Limited, whose mill is at Kapuskasing, Ont. Mr. Jones was for several years a Member of Congress and has been associated with the Spruce Falls Co. for some time.

The plant is now turning out daily over 100 tons of sulphite pulp. It is equipped with four digesters each with a capacity of 25 to 30 tons and at present the entire output is taken to the Kimberly-Clark Co., Inc., of Neenah, Wisconsin, for its various mills. Good progress is being made in the line of production and the company is looking forward to a successful year.

### Placed on Market at Wrong Time

Speaking in the Ontario Legislature recently D. M. Hogarth, M. P., for Port Arthur, made a rather severe attack upon the administration in connection with its disposition of pulpwood limits.

The Province of Ontario, through the incompetency and lack of knowledge of the government was a loser to the extent of \$6,000,000., declared Mr. Hogarth, commenting on the transaction which resulted in the disposal of the Long Lac and Nagagami concessions in July 1921. These two reserves, he added, had an area of 6,000 square miles. Government cruises showed that they carried some 10,000,000 cords of pulpwood. They had been placed on the market at a time when the bottom had fallen out of the paper market. As a result, they had brought only 40 cents a cord and today would bring \$1. a cord. In case the government was inclined to doubt his statement, Mr. Hogarth offered to put the Department of Lands and Forests in touch with individuals who would pay the latter price without grudging.

### Mr. Hennessy Resigns as Woods Manager

A. W. Hennessy, who for the past six years has been manager of the woods department of the Abitibi Power & Paper Co., Iroquois Falls, Ont., has resigned and will carry out a good deal of work on his own account in the way of logging contracts with a number of mills. He is a man of wide experience and sound judgment and was contracting on the Abitibi limit in 1917 when his brother, O. M. Hennessy, manager of the woods department, lost his life at Island Rapids, above Twin Falls. A. W. Hennessy succeeded him. Previous to his work for the Abitibi Company, he was with the J. R. Booth interests for some time.

H. G. Schanche, who has been manager of the forestry department for a considerable period, succeeds Mr. Hennessy and will carry on the work of both departments. In future all woods operations for the Abitibi organization will be in charge of Mr. Schanche, who supervised the logging work on the railroad territory during the past winter. Mr. Schanche has appointed Hugh D. Hennessy superintendent of logging, and G. W. Turk office manager.

## The Canadian Land and Immigration Company of Haliburton, Limited

This Company owns in fee simple over 300,000 acres of timber lands in Central Ontario. These lands are well timbered with Spruce, Balsam, Hemlock, Basswood, Birch, Maple, Ash and Cedar and considerable Pine.

The timber on this property will be sold in blocks of from 10,000 to 50,000 acres with a reasonable time to take same off. Or the land and timber will be sold together.

There are two Railroads running into the property, one into the Southwest corner and the other into the Southeast corner.

This territory is so well interspersed with lakes and rivers that the cost of getting out the timber is comparatively small.

As the property is held in fee simple there are no Government dues or restrictions as to manufacture, therefore, anything cut on the property can be exported in its raw state.

Maps and plans and further particulars will be given on application to the undersigned.

W. H. LOCKHART GORDON,  
Managing Director,  
79 Adelaide Street East,  
Toronto.

6-9

## Pulpwood Limit

We have for sale licenses on two townships of about 72 square miles between Parry Sound and Sudbury. The timber on these townships is mostly poplar pulpwood and is exportable to the United States. Also there is a large quantity of other timber, spruce and balsam pulpwood, jack pine ties, elm, oak, etc.

The longest haul to the railroad would be about six miles and the average around three miles.

For further particulars apply to

Mulholland and Company  
23 Jordan Street, Toronto, Ont.

6-9

**Sawmill and Timber Limit for Sale**

Saw Mill located on the Canadian National Railway, Rawdon, Que., fully equipped, with 18 square miles of limits, assorted timber, at a bargain.

For further particulars apply

# Review of Current Trade Conditions

**Montreal Business Good and Prices Stiff**

There is little change in the Montreal market. Orders are still coming in freely, prices are strong and supplies of lumber are hard to get. Wholesalers, who have been fortunate to secure additional stocks, find no difficulty in immediately disposing of them. The recent heavy buying has taken large stocks off the market with the result that the shortage is becoming pronounced. This foreshadows further increases in prices, provided the demand is even moderate. Some of the mills are holding on in the expectation that the upward movement will continue for some time, but there is such a thing as losing the market.

Wholesalers generally are of the opinion that they will do an active trade for several months and, even if prices decline under the pressure of the new cut, the recessions will not be of a far-reaching character.

The orders for spruce for American account are still of appreciable volume. Fortunately the car situation is better so that shipments are going forward at an increased rate. The supply of cars is still far from adequate, particularly on the Canadian National Railway lines.

The hardwood section is very strong with stocks by no means plentiful. Prices now being paid for birch especially represent a substantial advance as compared with three or four years ago, and some of the Quebec mills are asking still higher prices for the stocks on hand.

Lath continues to be firm. There are many inquiries and the mills are inclined to boost quotations for spruce lath.

Although navigation will not be open for some time, there are indications that exports to the United Kingdom will be on a larger scale than last season. Some shippers are planning on a more extensive trade with the Old Country where the demand should be more active having regard to the better commercial conditions there. Some time ago the steamship companies intimated that the rate would be 80s per standard, as against 85s last year. This, it is now announced, will be further reduced to 70s. The exporters have complained in the past that the rate was too high, especially when compared with the rates paid from countries competing with Canada in the United Kingdom. The answer was that the rate had little bearing on competition and that reduced rates would not stimulate shipments. The protests, however, have not been in vain, although shippers would like to see a more drastic lowering.

**St. John Looks for Higher Prices for Spruce**

Local conditions remain unchanged in as far as they apply to the lumber trade. Heavy snows and cold weather in March stagnated trade for a while. No repair work of any magnitude can be taken up; only such cases as fire losses which must be replaced, are being carried on, and, fortunately, for the community very few fires of any size have happened. The factories are finding hardly enough work to keep the wheels turning, the manufacturers being forced to make up stock for future trading rather than tie up their plants. Prices remain firm caused rather by the advances in spruce and B. C. fir at the point of shipment.

The foreign markets are holding their own. The English market has not weakened even under the present continental conditions, and sales have taken place which are leaving an all-around price of \$30.00 per M at mills, containing about 2/3 7 and up with around 20% and up, ordinary random stock. Only a few sales have taken place as manufacturers believe prices will improve. Freights re-

main at 65 shillings for tramp steamers for summer loading. A good deal of stock has moved out of St. John via the liners, both to Liverpool, Glasgow and Irish ports. Of course, the Irish deal shipments are selling at much better prices than above, and the only drawback is the shortage of stock available for this market.

The American market has advanced prices from \$1.00 to \$2.00 per M during the last few days, and the Boston price for narrow and random is now \$37.00 to \$38.00, which leaves \$27.00 to \$28.00, f.o.b. St. John rate. The whole trouble was to get stocks forward as practically every point on the B. & M. was embargoed with the exception of the shore route via Salem, Mass.

With only a limited amount of Eastern stocks available, a fairly good English market and the west fairly well taken care of, there is no reason why spruce will not grow to even higher values. No manufacturer wants to see it overdone but, at the same time, it has been much more expensive to log this winter than a year ago and higher values are needed.

**Quebec Exporters are in More Optimistic Mood**

Although the letters so far received from the selling representatives of the Quebec lumber firms who proceeded to the United Kingdom at the end of January last, are not as encouraging as anticipated, there is a feeling in the Quebec export business that a reaction is destined to set in during the month of April that will put a new and surprising complexion on the political and with it the business horizon of Great Britain.

From confidential trade advices received of late from business centres of England, a new spirit of optimism has taken possession of the British public, causing more animation in the industrial and retail activities of the country, which is bound to spread into all avenues of the business life of the United Kingdom. This cheering aspect at present permeating the mental vision of the British public, is due to the expectation of a settlement of the Near East Question and the prospects of an agreement being reached between France and Germany over the reparation question which will bring peace, and in due time normalcy to the European world. The silver lining has begun to make its appearance amongst the dark foreboding clouds that have so ominously overhung the European horizon since the war. Expert economists, who have been visualizing the situation, have withdrawn their telescopic concentration to exclaim that there is no further justification for pessimism.

In the meantime, Quebec lumber firms and limit holders, who are carefully watching the European situation, especially the wood markets in the United Kingdom, do not expect to receive many large orders from Great Britain for shipment in the earlier part of the coming spring and summer. They base their opinion on the short selling of their representatives in England during the first two months of the present year, and say that, with the settlement of the Near East and Ruhr difficulties, which will take months to reach agreements, they cannot expect any real beneficial results until the closing months of the 1923 season of navigation. Among the things they point out in justification of their viewpoint is the persistent discrimination against Canadian export trade by the steamship companies in their high rates of ocean freight which embargoes them from competing with the prices of wood exported from Scandinavian countries to the United Kingdom markets. For this reason they, while keeping a hold on the European markets, are for the present placing all their dependence on the United States market.

The Quebec lumber merchants and mill owners are all heavily booked with orders from the United States where the building boom continues, and from American export advices, will continue all

through 1923, and go better, at least 25 per cent, over 1922. But in this case the Quebec shippers are badly handicapped on account of the car shortage and periodical embargoes by American railroads. W. Gerard Power, president of W. & J. Sharples, Limited, St. Pacome Lumber Co., and other big interests in the lumber trade, discussing the car shortage situation with the Quebec correspondent of the "Canada Lumberman," said "The conditions in connection with the shipment of lumber from the district of Quebec are, to say the least, intensely aggravating. This does not alone apply to the want of cars for the shipment of wood to our customers in the United States but likewise applies to the shortage of cars on our own Canadian railroads. The general public would hardly believe it but it is nevertheless the truth, that the Quebec lumber shippers are constantly after the Canadian railway interests, especially on the south shore of the St. Lawrence where the Canadian National Railways operate, to obtain freight moving accommodation, with negligible success. For this reason our business is greatly interfered with and held up, to our business detriment, and notwithstanding we have no redress. There seems to be a big shortage in freight cars and the railroads appear unable to remedy the regrettable situation.

"In reference to the American car shortage situation," said Mr. Power, "it is almost intolerable. We in the Quebec trade have large orders for shipments into the United States which we are powerless to have moved. Every now and then there is an embargo placed on Canadian shipments into the United States, which is a source of great annoyance. Goodness knows we have many and great difficulties to secure cars, and when we do get a few together at the mills and loaded for movement, in comes the order that an embargo has been placed.

"No doubt," he continued, "there are good reasons to be advanced by the American railroads for the placing of these embargoes, but, in the meantime, the Canadian shippers are suffering. The reasons advanced for this state of transportation hold-up can be traced to several sources,—the miners' strike, the shortage in the coal situation in the New England and New York States, the movement of grain for shipment through American Atlantic seaports and lastly, and not leastly, the depreciation in American railroad rolling stock. This latter difference is undoubtedly due to the letting over and operation of United States railroads by the American Government during and for some time after the war. When the life was worked out of the cars by neglect to repair, the railroad shopmen's strike, and the disinclination of the American public to invest their money in American railroads. In the meantime something must be done and done quickly to remedy this lamentable car situation before the bottom of the transportation system in the United States, as well as Canada, is knocked out."

W. G. Power, and several woodmen employed by the various Quebec lumber firms and limit holders, who returned from the woods in the second week of March, reported a considerable depth of snow, sufficient in some cases, to hamper operations. It would appear that the snow has fallen in greater abundance along the south shore of the St. Lawrence than the north shore, though with the exception of the upper part of the Lake St. John and the Saguenay, the beautiful was from four to six feet in depth. Mr. Power said that there is a good depth of snow in the limits owned and being worked by his company's interests, which indicate an abundance of water in the rivers for the spring drive. It is computed that logging to the extent of one billion beet is being cut in the province of Quebec woods this winter, the greater part, or approximately 62 per cent, for pulpwood. Mr. Power states that his firm is cutting the same amount of wood as last year, and, with the exception of Price Bros., all the other firms are harvesting about the same quantities in timber and deals as last year. This is being carried out principally to meet the demands of the American market.

### New Lumber in East is Moving Fast

Rufus E. Dickie, of Stewiacke, N. S., president of the Nova Scotia Lumbermen's Association, in a recent letter to the "Canada Lumberman," reviewing operations of the past year and the outlook for the future, says that it was late last fall before Nova Scotia operators decided to go into the bush, and work should have started a month before it did. Men were not as plentiful as wished for, and this spring the crews were leaving the camps earlier than usual. The winter operations by millmen will only show a small profit. Operators had planned for a cut of around 200,000,000 feet.

Snow came early in December and the frost did not get a chance to get into the swamps and soft places; the lakes, however, froze well. Snow continued to come until about the third week in January when it got so deep that a great many camps had to come out. The worst snow seemed to be in that section of Colchester bordering on the Bay of Fundy and all of Cumberland County. Some parts

of southern Nova Scotia were also hit hard. The snow all over the province was deep and those camps that were working, have not been able to get the quantity out they otherwise would have. The snow difficulty reduced the expected cut by at least 50%; 125 millions will be the limit and this will be mostly manufactured this winter. The summer cut will be small.

Approximately all the old merchantable stocks have been shipped and the very small portions remaining have been pretty well sold. Even the culls are pretty well cleaned up. The new lumber is moving to market very fast and the quantity left by May will be small; practically everything has been sold.

Manufacturers have always favored the English market, and as that market improved last fall sufficiently to show a profit, many of the cuts were sawn into English sizes. The American railway embargoes have also had some effect in turning stock overseas. Liner shipments go forward regularly every week. The English market has taken considerable American sizes this winter and a lot of two inch stock has been sold there at fair prices.

Nova Scotia did not go into the lath game heavy and when the slump came in January most of the little mills stopped. No large surplus developed as the cuts were shipped about as fast as they were got ready.

### Good Lumber Market Outlook Throughout Ontario

The outlook in the lumber line continues bright and reports from nearly all concerns, big and small, are unanimous that business is good in spite of adverse weather conditions which prevailed for several days in March. City yardmen are purchasing more freely than rural retailers as building has started up on a broader scale in the larger centres. Most country dealers are pretty well stocked up at present and are waiting for spring developments before buying to any considerable extent. Dry mill stocks of all kinds are not plentiful at the present time and particularly so in many grades of white pine. There is a decided shortage of culls and prices have stiffened considerably on box, common and dressing.

White pine culls of all thicknesses in 10 and 12-inch widths are scarce in both No. 1 and No. 2. No. 1, 2-inch cull stock is practically off the market. No. 2 culls in the narrow widths are moving lively on account of the shortage in No. 1.

Nearly all the mills have sold their output for the coming year at an advance of 15 to 25 per cent over the figures that prevailed last spring. This is interpreted as a good omen and portends a season of activity and development. The one great fear is that there may be a runaway market, and if prices should go too high, there will be a decided reverse. Many other articles entering into the building of a house or business block are going up in value, and if the advances continue, the number of business concerns and private parties, who were thinking of going ahead with structural undertakings, may call a halt in the proceedings. Dry stocks from the 1923 cut will be coming on the scene early in June and July, and just what effect increased production will have, cannot be gauged at this period. Even if prices should drop at that particular time, it is felt that the decrease will be so small that the general situation will not be materially affected.

An active building season is predicted by all those closely allied with the structural trade unless prices ascend away beyond present levels.

Advices from the Coast say that B. C. mills are booked full to the end of May for lumber export to China, Japan, Australasia and the United Kingdom. A total of about 30,000,000 feet is on the books. About twice this quantity will be shipped to California and Atlantic coast ports in the same period, it is estimated. The prairie or domestic market is at present dormant.

Lumber manufacturers are now anxiously looking forward to the way that conditions will open up for the spring drives and mills are preparing to make an early start. It is believed that the forthcoming sawing season will be an unusually long and successful one.

During the third week in March there were heavy snow-storms in the north which somewhat interfered with the hauling and skidding of logs. Just how soon the lakes and streams will be free of ice and drives begin, it is impossible to state at the time of writing.

The demand from the United States markets is particularly active and the number of embargoes which have prevailed, are gradually being lifted. Many firms are behind in their shipments, and now that the transportation situation is easier, are rushing forward the stock.

Conditions underlying the whole lumber arena are fundamentally sound but every attempt should be made to check a speculative rise in prices. Some firms, whose supplies have run low, have shown a willingness to pay premiums in order to get what they

want and when they want it, but from advices received, there is evidence that serious resistance to too high quotations is likely to be offered. Most manufacturers are putting forth every effort to prevent too rapid or radical advances.

The hardwood market continues strong. Quite a number of stocks have changed hands recently, and it is expected that with the industrial revival of the spring, many firms, whose supplies have run low, will have to enter the market to satisfy their requirements. Automobile concerns continue to be very busy and are heavy consumers of stock. Some furniture factories are also reported to have made purchases recently. Generally speaking, prices hold firm with a tendency to increase in the upper grades. One wholesaler reports that No. 3 common birch, 1-inch stock, which is used principally for crating, is scarce at present.

Prices are generally low on 4/4 sidings in No. 2 common and better, 4/4 log run stock and the lower grades of 4/4 No. 2 and 3 common, but inquiries for these are likely to increase as soon as Canadian factories get busier. Selects and the thicker stock of maple, elm and birch have somewhat strengthened during the last few weeks. A number of farmers and others who have been cutting during the past season have sold their stock at a good figure.

It is interesting to lumbermen to note the trend of steel prices. Steel has always been regarded as a barometer of trade conditions, and quotations recently further advanced. Steel makers are doing all they can to enlarge production which is close to the limit imposed by physical conditions, transportation and the supply of labor. This condition is likely to have its influence on other industries. It is said that automobile production and building construction are approaching a limit in some centres because of the scarcity of materials. In spite of the fact that the United States Steel Corporation operations are at approximately 90 per cent of capacity, the unfilled orders increased 373,000 tons during February and at the close of the month total unfilled orders amounted to 7,264,000 tons, an increase of more than 75 per cent from a year ago.

### Building Trade Active in Bigger Cities

The value of building authorized throughout Canada during February was considerably higher than for the month of January, and also higher than February of last year. According to the Dominion Bureau of Statistics, 56 cities making returns, issued permits during February valued at \$4,744,478 compared with \$3,705,256 in January, and with \$4,201,955 in February of last year.

The largest actual increase during February occurred in the Province of Ontario, where 25 cities making returns showed a gain of \$566,505 or 20.9 per cent over February of last year. The largest percentage increase occurred in Saskatchewan where permits valued at \$75,820 were 182.1 per cent greater than in the corresponding month of last year.

Of the bigger cities, Toronto and Vancouver showed larger totals of authorized building than in January, 1923, and also than in February, 1922. Montreal and Winnipeg, recorded declines in both cases. Quebec, Fort William, Ottawa, Brandon, Calgary, Point Grey and Victoria showed improvement in both cases.

### Reduced Ocean Rates on Forest Products

There have been made several references to the complaints of exporters to the United Kingdom that freight rates are excessive in view of the lower charges from competing European countries. The steamship lines refused to make any material concessions last year, but this season have agreed to a rate of 70s. per standard, a reduction of 15 shillings.

Some information on how rates are fixed was given by W. A. Cunningham, general traffic manager of the Canadian Government merchant marine during the course of the investigation by the special House Committee on agricultural conditions at Ottawa. Mr. Cunningham was questioned as to the various conferences and other bodies of steamship owners. In answer to Mr. McMaster he stated that Canadian rates on pulp, paper, lumber, asbestos, nickle, flour and wheat were decided without reference to New York.

Mr. McMaster asked Mr. Cummings to explain a lumber item "applicable pending further concurrences of southern conferences."

"As far as Canadian lumber is concerned, Canadian lines decide the rate and simply as a matter of courtesy notify New York. Gulf rates are sent to us from New York simply for guidance," said Mr. Cunningham.

The chairman read a letter dealing with rate changes on wood pulp, notifying the secretary of the North Atlantic U.K. conference of the "Canadian line committees' decision."

"Then, once you form a rate, opportunity is given to your friends to fall in line," Mr. McMaster said.

"As a matter of courtesy, yes," Mr. Cunningham replied. "The same as they do to us."

### Mill Work Cost Convention in Chicago

The ninth annual convention of the Millwork Cost Bureau will be held in the Congress Hotel, Chicago, April 18th and 19th when it is expected that a number of visitors from Canada will be in attendance. The programme will include discussions on subjects of national interest and will evolve some tangible results. Among the topics will be a uniform millwork contract for national adoption; how may the industry foster apprentice training; publicity for your industry and its products; advantage of an estimator's club; hardwood grades; a solution of the related shortcomings of architects and mill men, etc. There will also be an open forum at the conclusion of the scheduled addresses. On the evening of April 18th the Bureau will be the host of the delegates at an informal banquet, and an interesting programme is being prepared.

The Millwork Cost Bureau, of which W. P. Flint is secretary, and whose slogan is "Know Your Cost," says to be sure and be present. Don't let the other fellow work out all your problems by himself but manifest your co-operation by being at the meeting and taking an active part in the general discussions that will follow each address."

### How Much for This Car of Shingles?

After unloading a whole car of shingles without results, Provincial police officers were successful at Winnipeg when they seized a consignment of assorted liquors, valued at more than \$20,000, on a track in the yard of a local lumber company. There were 225 cases, including 50 cases of wines, Burgundy and champagne, in the car completely surrounded by lumber. It had been loaded at Vancouver and transhipped at Calgary.

### Mr. Taylor Urges Reforestation Plan

D. J. Taylor, M.P.P. for North Grey, laid before the Ontario Government recently a plan to establish a reforestation area of two thousand acres around Boat Lake, four miles west of Wiarton in Bruce County. He is advocating the purchase of the property and placing it under immediate government supervision and fire protection. Mr. Taylor said the land could be secured for \$67.00 an acre. It is already covered with trees, principally pine.

Mr. Taylor also suggested that the Government take over districts of similar areas in other parts of Ontario as part of a general scheme for the reforestation and conservation of the forests of the province. He impressed upon the administration the importance of reforestation in hardwood trees which, he claims are of even more importance than the softwood.

### Says Transportation Costs are Too High

Angus McLean, of Bathurst, N.B., president of the Canadian Lumbermen's Association, states that the prospects for business look brighter this season. He added that the lumber industry has a good deal to contend with in the lack of cars for shipping lumber and also on account of the excessive freight rates that the railways are charging for transporting, and concludes,—"And until we have a full supply of cars so that the business of the country can move promptly and also have lower rates of freight, we feel that the forest products business cannot be so prosperous."

### Another Eastern Pupil Captures Prize

Violet L. Murdock, a seventh grade pupil of Chatham rural school No. 10, and the daughter of Mr. and Mrs. Archibald Murdock, of Chatham township, Argenteuil county, Que., was awarded the second of three prizes offered to English pupils of the province of Quebec by the Canadian Forestry Association, for which the competitors were required to write an essay on forestry. Miss Murdock's prize was \$15. Three prizes of twenty-five, fifteen and ten dollars respectively were offered to pupils in each of the nine provinces, with an additional set of prizes for Quebec in order that English and French pupils might participate separately. Thus \$500 were distributed by the association in this manner throughout the Dominion.

### The Value of a New Idea

Next to character, a new idea is the most valuable thing in the world. A new idea is something that anyone, rich or poor, young or old, can get. Every progressive employer will cheerfully pay for a new idea. The best way to get an increase in salary is to bring your employer a new idea. New ideas are the only things that have made money for me; new ideas are what every one makes money with. I have yet to hear of a person who carried a good idea to his or her employer and did not get rewarded for it. All of us can cash in something on every worth-while idea.

## EDGINGS

C. Blakeley, manager of the Montreal office of Cox, Long & Co., is again on deck after a serious attack of pneumonia.

Fisette & Dupre, Contrecoeur, Que., have started work on a new sawmill one storey, 60 x 40, to cost about \$8,000.

Ed. Irwin has removed to Pinewood, Rainy River district. He is a former resident of Peterboro and for a number of years owned a sawmill at Quibell, Kenora District.

H. L. Pease, secretary of the National Association of Box Manufacturers, Chicago, spent several days in Toronto recently on business.

Oxbow Lumber Co., Limited, Winnipeg, Man., was recently incorporated to conduct a wholesale and retail lumber business. Capital \$25,000.

Sarnia Lands, Limited, Sarnia, Ont., is a new corporation with provincial charter to deal in all kinds of building materials and to promote the building of homes. Capital \$100,000.

The Belgo Canadian Pulp & Paper Co., Limited, Shawinigan Falls, Que., have awarded a contract for an extension to their paper mill.

William Sheahan, general superintendent of the Powell River Pulp and Paper Co., Powell River, B. C., died recently at that place, of blood poisoning, aged 56.

Security Home Builders, Limited, Toronto, is a new enterprise with a capital of \$500,000 to deal in building materials and to promote and assist in the building of homes and other buildings.

Herbert Parker, aged 19, had his leg torn off below the knee at Haydens sawmill, Shewen Siding, Woodstock, N. B. The young man is expected to recover, but his leg was amputated above the knee.

The William Hamilton Co., Limited, of Peterboro, have supplied the equipment for the new cutting-up and barking plant of the Howard Smith Paper Mills at Gaspé, Que. The building has been completed and the machinery is now being installed.

Thomas McKain, an official of the E. B. Eddy and J. R. Booth mills at Ottawa, and a resident of the capital city for over sixty years died recently. Mr. McKain who was in his eighty-ninth year, came to Canada from Ireland at an early age.

D. H. McLennan, the president of the Montreal Lumber Association, was one of the guests at a dinner given by J. W. Ross, the president of the Montreal Board of Trade, to the executive and council of that body. Mr. McLennan represents the lumber trade on the council.

James C. McCuaig & Co., Limited, Ottawa, have recently received a federal charter to take over the businesses of James Cuyler McCuaig and James C. McCuaig & Co., and to manufacture and deal in lumber and pulpwood. Capital \$50,000. One of the incorporators is J. C. McCuaig of Ottawa.

Frank Blackmore, an employee in the sawmill of the North American Bent Chair Company, Owen Sound, narrowly escaped being sawn up when the machinery the jack ladder he was thawing out started up. The hooks caught his clothing and dragged him giving him a severe mauling besides crushing two fingers.

The friends of Alex. R. McLachlin, of Toronto, who is well known in lumber circles, will sympathize with him in the loss of his wife who died recently as the result of bronchitis. For many years Mrs. McLachlin resided in Arnprior, and in 1907 removed to Toronto. Besides her husband she is survived by one son and four daughters.

Wilbert Hooley, a well known Toronto manufacturer and founder of the Eureka Refrigerator Company died recently at his home in Swansea, a suburb of Toronto, in his 66th year. He retired about six years ago when his company sold out to Keenan Bros. of Owen Sound, Ont.

In the last issue of the "Canada Lumberman" it was stated that R. H. Spencer, of Trenton, Ont., who was recently elected Grand Z., at the annual convention of the Grand Chapter Royal Arch Masons, was identified with the Sheppard & Gill Lumber Co. This was an error arising through a similarity of names. The firm with which Mr. Spencer has been associated for many years is the Gill & Fortune Lumber Co., Trenton.

The Fraser Companies, of Edmundston, N. B., have made extensive additions to their sawmills at Campbellton and Newcastle, N. B., by the installation of slab slashers, lath mill machinery and 54-inch chippers. The William Hamilton Co., of Peterboro, are supply-

ing the complete equipment, including the necessary transmission and chain.

The contract for the dams on the Chicoutimi and Sable rivers at Kenogami, has been granted by the Quebec Cabinet to the Nova Scotia Construction Company, at a cost of \$985,682. This was the lowest tender. There was a difference of nearly \$500,000 between the successful tenderer's price and the next highest bidder. Work is to start at once.

Jerome C. Dietrich, president of the Shurley and Dietrich Company, Galt, Ont., is the oldest active saw manufacturer in Canada. Approaching his 85th birthday, he is daily to be found at his office taking an active interest in his business and in full possession of all his faculties. He has been identified with the saw business for 55 years and came to Galt in 1873, and has been in business in that city ever since.

A fire occurred at Connaught recently in the upper floor of the building occupied by the St. Maurice Lumber Co. as a storehouse and dwelling. It is believed the blaze originated from a defect in the chimney. The building and contents soon became a total loss. Frank Little and family were heavy losers as well as the St. Maurice Lumber Co. The flames extended to the company's office, a few feet away, and this structure was also destroyed but most of the contents were saved. The damage is estimated at \$20,000.

The Provincial Paper Mills, of Toronto, who recently put into operation a new plant at Port Arthur, intend starting up their new groundwood pulp mill in a few days. This department, which will turn out 15 tons daily, will supply all the necessary mechanical pulp for the paper mill. The Provincial Paper Co. are taking out about 40,000 cords of pulpwood in the vicinity of Port Arthur, and of this about 30,000 cords will be cut by the company.

Preliminary estimates of the building boom that is certain to develop in Haileybury, Ont., during the coming summer indicate that two schools, at least a dozen business places and not less than one hundred private dwellings will be erected in the town. In addition to this program, work will be commenced on the rebuilding of the court house, and it is probable a start may be made on the long promised district jail provision. For both of these public buildings having been made in the estimates submitted to the Legislature.

Extensive operations are to be commenced immediately by the Thielman Forest Products Company, of Chicago, in the Township of Pennefather near Goulaise Bay, Ont., in the logging of seventeen square miles of timber, mostly hardwood for the Ford factory at Lanse, Michigan, on Keeweenaw Bay, near Marquette, a distance from the woodland area of approximately 200 miles. They expect to log fifteen million feet of lumber a year. The company will employ between three hundred and four hundred men.

The advance guard of the "lumberjack army" invaded Port Arthur recently and rank among the first to leave the woods following the winter's cut of timber and pulpwood. A party of four men marched down Arthur street in the afternoon and made a bee-line, or rather a train-line, for the bank. So accustomed have they been for the last few months to following single file in bush trails they forgot they were back again in civilization and marched down the street, one following the other, just the same as if they were still "on the road."

The Canadian National Railways have issued a new tariff rate list on lumber and forest products, excluding mahogany, rosewood, walnut, cherry and other valuable woods, from stations on the C. N. R. —Argolis, Ont., Hearst, Ont. and east thereof to and including Quebec, Chicoutimi and St. Felicien, P. Q. to C. N. R. stations south of the St. Lawrence River, Diamond Junction, P. Q. and west thereof; also to stations on connecting lines specified. The tariff gives the new through rates and also specifies where reductions have been made. At the last meeting of the Montreal Wholesale Lumber Dealers' Association J. S. Bock, the chairman, referred to this list and suggested that it would be well to study it, in order that no overcharges were made by the company.

C. M. Knox, of Knox Bros., Limited, Montreal, recently bought on the north side of Burrard Inlet, Vancouver, a valuable site. The location is close to the north approach of the bridge which will likely be built at Second Narrows and will link up North Vancouver and the City of Vancouver direct by rail. It has been stated that it was the intention of Knox Bros. to build a large mill on the property but it is reported that no such plan will be carried out at present. Mr. Knox declares that he had acquired the site, believing that it would prove a good investment upon the construction of the bridge. The British Columbia Interprovincial Lumber Co., which is a subsidiary organization of Knox Bros., shipped last fall via the Panama Canal from Vancouver to Montreal more than 5,000,000 feet of lumber, and two large steamers have been engaged to carry about 9,000,000 feet from the Coast to Montreal during the present month.

# THE LINN LOGGING TRACTOR

The above illustration is the first of a series which will appear in the Canada Lumberman—and will show Linn Logging Tractors in operation in various parts of Ontario and Quebec. Some of these photographs have been taken by the owners of these Linn Logging Tractors—some by us.

We gladly invite enquiries addressed to any Linn user as to the ability of the Linn Logging Tractor to create hauling economies so great that, had they contemplated the extent of these cost reductions, before experiencing them themselves—they would not have believed such drastic reductions possible—yet we know that next season the cost reductions in each case will be even greater.

We feel that we can do no better than to quote the slogan used for many years by a leading manufacturer of high grade motor cars and trucks—"ASK THE MAN WHO OWNS ONE."

# The Mark

Look for the Trade-Mark  
—it's put there for your  
protection!

NOT until every inch of it is declared perfect is the Oak Leaf trademark stamped on a D. K. McLaren Genuine Oak Tanned Leather Belt.

This trademark is the buyer's protection against substitution. It guarantees him 100% value for every dollar invested. It tells him that as long as the belt is in service transmission costs will be kept at rock-bottom.

Are you tired of buying belting blind-folded? Then let a D. K. McLaren salesman tell you of his GUARANTEED proposition. He will sell you a belt, not on the basis of what it *might* do, but what it *will* do.

## THE MARK OF DISTINCTION IN CIRCULAR SAWS

The first Circular Saws made in this Country were placed on the market by R. HOE & CO. in 1828, and GENUINE HOE SAWS have held the leadership in QUALITY, FINISH and SATISFACTORY SERVICE during the 94 years intervening to the present day.

For all purposes, and under all climatic conditions, the GENUINE HOE CHISEL-TOOTH and SOLID TOOTH CIRCULAR

SAWS have proven their superiority in every part of the World, and backed by a guarantee of absolute satisfaction no operator could do better than to use GENUINE HOE SAWS exclusively.

# GATES FURNACE

## For Burning Sawdust and Hog Fuel

*Will burn tan bark, hog fuel  
and sawdust efficiently, with up  
to 60% moisture.*

**Gates Air Cooled Sus-  
pended Arches**

**Boiler Door Arches and  
Jambs**

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned. Note that fuel is partly dry before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace. All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline gates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

## The Finest Chefs Will Fail Unless

You pay your chef high wages. You realize that on him depends much of the efficiency of your men, for good grub means a great deal to a camp. That is good business.

But the finest chef in the land will fail if you handicap him with poor supplies. It pays well to give him Swift's.

Swift's products are the result of many years' experience in catering to lumber camps. Jewel Brand Shortening makes fine pastry certain. Our fresh and frozen meats are selected from the best the country offers. And all supplies are kept up to the highest standard. They reach you in perfect condition in our own refrigerator cars—on time. These are the reasons camp operators in increasing numbers are turning to Swift's.

## Log with "Caterpillars"

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in logging work, winter or summer. Its flexible tracks enable it to climb over obstructions, cross ditches, and operate continuously both on and off the road. It is easy to control, turns in its own length and provides correct speeds for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. The Abitibi Power & Paper Co. at Iroquois Falls, Ont., is logging the "Caterpillar"\* way. Let us give you the facts on their operations.

\*There is but one "Caterpillar"—Holt builds it

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

## Put your problem up to us

We are specialists in building locomotives. We build all types and sizes, also all kinds of repair parts for locomotives and tenders.

Our experience puts us in a position to give you expert advice as to what particular type and size of locomotive is best suited to your needs.

**Put Your Locomotive Problem  
up to us.**

## Montreal Locomotive Works

Limited

**Dominion Express Building, : Montreal, Canada**

Fig. 25—London Combination Mixer  
Nos. 4 and 6

### LONDON CONCRETE MIXERS

are built to give continuous service under the most exacting conditions. They do rapid work and produce concrete with low labor cost.

LONDON MIXERS are being specified by engineers who know from experience that the first cost of a machine should not be the deciding factor when purchasing equipment. Slow production and breakdowns put the contractor out of business. The contractor can rely on the "LONDON" when profit depends on constant service and rapid production.

#### MADE IN CANADA

We manufacture Concrete Mixers, Hoists, Air Compressors, Pumps, Brick, Block and Tile Machines, Barrows, Carts, Silo Moulds, Ornamental Moulds and Tools.

**London Concrete Machinery Company, Ltd.**

## Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

# ATKINS

## STERLING QUALITY SAWS

### Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

### Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan,

***"The Finest on Earth"***

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

## E. C. ATKINS & CO.

Established 1857      The Sterling Quality Saw People

Canadian Factory, HAMILTON, Ontario

Branch carrying complete stock, VANCOUVER, B. C.

**MADE IN CANADA**

# The "LONG" Band Mill

## meets every requirement

**The Name  
"LONG"  
Is Your  
Guarantee**

Long Chains  
Niggers, Steam and Friction  
Rollers, Live and Dead  
Saw Frames  
Band and Circular Resaws  
Slashers  
Steam Feed Valves  
Shingle Machinery  
Trimmers  
Transmission Machinery  
Transfers  
Carriages  
Cant Flippers, Steam Edgers  
Feeds, Steam and Friction  
Lath Bolters  
Lath Machines  
Lath Binders and Trimmers  
Log Jacks  
Log Kickers  
Log Loaders, Steam  
Log Turners.

The value of long experience in the manufacture of sawmill machinery was never more evident than in our Band Mill. It embodies improvements in design and construction so practical that operators will at once recognize their worth.

They include:

Columns of full hollow box section, joined at the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible.

Guides swing on centre line of saw. Blocks adjustable in all directions. Quick opening, non-breakable pattern. Upper and lower bearings the same size and interchangeable—Chain oiling, water cooled, adjustable in all directions.

Protected steam cylinder to operate upper guide.

Dake engine to handle upper wheel.

"Long" Sawmill Equipment has for many years been recognized as the most advanced and efficient line offered to the industry. "Long" experts are always at the service of millmen for practical help and advice. "Long" Machinery catalogues should be on file in your office. Write for them today.

# Waterous Boilers

## Are Best for Sawmill Use

You can get the best efficiency and satisfaction in steam production by using *Waterous Return Tubular Boilers* installed the Waterous way.

They are economical of fuel—carry plenty of steam in reserve for use in emergencies—can be used with hard

and dirty water—they are easily cleaned and readily taken care of.

Our boiler settings—*both full front and duck oven*—are dimensioned and designed to best handle the various fuels used in the sawmill. We can guarantee to give you the

most perfect combustion, with the least amount of work and attention, whatever kind of fuel you burn. We build both brick and full steel settings for all size boilers, single or battery.

Waterous Return Tubular Boilers are built for all Provinces—any size up to 165 HP.

*Write for New Catalog.*

### Quantity Production Lowers Manufacturing Costs

The demand for a medium priced—high-class motor boat has resulted in GIDLEYFORD sales far in excess of expectations. The Gidley organization is able to concentrate on quantity production on an unheard of scale, with the logical result—lower production costs.

This enables us to sell the GIDLEYFORD at a greatly reduced price, and we will maintain the quality that is represented by the combined names of Gidley and Ford.

GIDLEYFORDS will be allocated as orders are received and shipping dates arranged.

Price reduced to \$1250. F.O.B. rail or water, Penetang, Ontario. In Canada, Sales Tax extra.

**1923 Price—\$1250**

**GIDLEY BOAT COMPANY, LIMITED, PENETANG, ONTARIO**

# "HAMILTON" LATH MACHINES

**"TEN-TEST" SOLID FIBRE BOARD**

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

## ONTARIO

### Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M  
Pulpwood, 246,282 cords.  
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

**HON. BENIAH BOWMAN,**

Minister of Lands and Forests

# U.S. Buyers of Canadian Lumber

## The WOODSTOCK LUMBER COMPANY

131 State Street  
Boston, Mass.

Twelve Months in  
the Year

ONE way in which to render efficient service and build a strong connection is through ability to satisfy the demands of customers at short notice. In other words, it is in having the stock or in knowing where to get it without delay which establishes a clientele, broadens activities and increases turnover.

There is no better medium through which American buyers of Canadian lumber can satisfy their wants than by using the columns of the "Canada Lumberman." A large number of U. S. purchasers of Canadian stocks employ space in "Canada's national lumber journal" in order to make their requirements known and to have them supplied in the quickest period. To reach the great Canadian lumber field more can be done by means of a widely read, alert, trade publication going directly to the sources of supply and distribution than in any other way.

Acquainting the Canadian lumber industry with your wants is sound, aggressive business on the part of American forest product organizations. Leading concerns recognize this and, instead of the "still hunt," they believe in coming out and "telling the world" just what they need. The result of such wide, far-flung inquiries is that all the best and most available stocks are offered. The greater the selection presented, the better the choice. Expediency of service and mutual satisfaction are the natural outgrowth of such a progressive proceeding.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

### HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

**EVERY** strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This  mark identifies genuine Link-Belt Chain.

## How Entire Lumber Town Was Moved by Motor Truck

*One Hundred Houses Conveyed Distance of Eleven Miles on Specially Built Trailer Which Made Wholesale Transportation Possible.—Townpeople Take Their Homes with Them to New Jobs.—House Problem was Solved when Mills were Moved.—The Way Shifting Operations were Carried on Successfully.*

At some time or other every contractor has been faced with the problem of moving a building to some other location. In every Western town it is a common sight to see houses or barns being transported through the streets with a long string of horses as the motive power.

But if a contractor was asked to figure on the job of moving an entire village, lock, stock and barrel, he might be excused if he declined to tackle it. Nevertheless, it has been done, and successfully too, without injury to the buildings, save several windows were broken by tree branches while en route.

Of late years the development of the automotive industry has made possible the moving of heavy machinery and buildings, such as would have been called impossible a decade ago. This is the story of one such feat, accomplished by the Acme Motor Truck Co., of Cadillac, Mich., which firm, by the construction of a trailer of unusual size and design, moved an entire village a distance of eleven miles over country roads.

When moving houses the roadway was just wide enough in places to allow the big trailer to pass between the shrubbery and trees

The town of Jennings, 11 miles north and east of Cadillac, was founded more than a quarter of a century ago by the Mitchell Bros. Lumber Company. A saw

mill, chemical and flooring plant gave employment to approximately 500 men. Jennings was a "company town," for though it had a number of churches, "opera house," roller skating rink, community house, band stand, jail and other civic buildings, there was but one store in the village, that a general one, carrying all sorts of supplies. About every able bodied man in the village was employed in one of the company mills. When the little town was founded, the unbroken hardwood forest surrounded the village for miles and miles in every direction. A beautiful little lake nestled among the hills, the waters of which were alive with gamey bass, pike, perch of unusual size and many other varieties of fish. Life there was almost ideal, and the needs of the inhabitants simple.

### The Mills Shut Down

But as the years rolled past, the standing timber around the village gradually disappeared before the onslaught of axe and saw, until a few months ago the last of the big trees fell and then it was only

One of the streets in the town before moving operations began

a question of time when the fires would be drawn and silence fall over the hills.

Various plans were considered for the preservation of the industrial life of the happy, contented little village, but all were discarded. Then was born the idea of moving the mills, the families and the residences to Cadillac, eleven miles southwest. Many plans were considered and rejected as impractical before the motor truck and trailer was considered. Finally W. A. Kysor, President of the Acme Motor Truck

rate of moving is about two houses every three days, or four per week. There are from 75 to 100 of these residences to be moved.

In addition to the houses both the flooring and the chemical plants are to be moved, which makes this project the most extensive of its kind yet attempted, though a short time ago a complete village was moved a distance of half a mile by horse power, but the plaster was badly cracked in most of the houses, while all of them

To give rigidity and strength to the structure, the three centre longitudinal members are reinforced with large truss rods securely anchored to the members at each end and supported at equal intervals by cast iron struts. The tension in these rods is equalized by a series of turnbuckles. All frame connections, gussets, braces, etc., are hot riveted, the entire frame reflecting the skill of our structural workers.

The platform at the forward end of the frame is raised 18 inches above the trailer. It is constructed of channels, I-beams and plates, and substantially braced with diagonal members to the forward transverse member of the trailer proper in order to eliminate side sway. This platform is connected to the trailer frame by means of heavy gusset plates and channels of sufficient strength to safely transfer approximately 25 per cent of the weight of the trailer and load to the rocking fifth wheel mounted on the truck.

#### Unique Type of Running Gear

At the rear the trailer is carried on four cast steel truck wheels, all abreast, equipped with 40 x 6 dual truck tires. The wheels are arranged in pairs, each wheel operating on tapered roller bearings supported by a tubular steel axle shaft. The shafts of each pair of wheels are bolted together at the center through a large steel casting which is supported by an extra heavy wrought iron pipe extending through it and at right angles to the shaft. Heavy steel pillow blocks at either end of this pipe support the weight of the trailer and load through coil springs, attached to the trailer frame. This unique construction not only cushions the load, but successfully provides for road inequalities, which is very essential when taking into consideration that the distance between the outside wheels is approximately 11 feet.

To relieve the springs from driving stresses, a radius rod with flexible connections is provided for both sets of wheels, the forward end of which is secured rigidly to the trailer frame and the rear end fastened to the end of the wrought iron pipe through a swivel connection.

In order to maintain perfect alignment of all four wheels, the wrought iron pipes supporting the axle shafts are tied together by a system of flat bars secured to the trailer frame and so arranged as to compensate for spring deflection.

The distance from the top of the trailer frame to the ground is approximately 40 inches when the trailer is loaded.

The house is raised by a series of jacks located at each side. The two outside longitudinal members of the trailer which are bolted on, are removed. The trailer is then backed under the building and the house is lowered until it rests evenly on the trailer frame. The side members are replaced if it is found necessary, and the unit is ready for its journey.

The motive power for this big contract was a standard Acme Model 125 chassis, equipped with a Continental motor, which develops 55 h.p. actual break test. This power, together with a gear reduction of approximately 71 in first speed, easily negotiated a 6 per cent grade, 600 feet long, over a gravel road with a 35-ton load on the trailer.

The big trailer designed and built especially for transferring the homes of the people. Its construction excited much interest and many guesses were made as to its intended use before the real object was disclosed

Company, submitted a plan to the lumber company, which was accepted, and the gigantic trailer illustrated was built.

The next thing to be considered was the road over which the many big loads would have to pass. About 8 miles of the distance is over the Michigan Trunk Line, the rest of the way over a fairly good dirt road. Considerable work had to be done on this highway, the road bed widened at a number of points, and in all cases of this kind, heavy planks or timbers were laid smoothly to make a level roadway. A bridge across the Clam River was widened and reinforced. In the village, entire streets were paved with heavy green planks to sustain the weight of the load, as the soil there is largely loose, soft sand.

#### Breakage Practically Nil

The houses to be moved vary in size from 24 x 30 to 24 x 40 feet. Many of them have hardwood floors, all are a storey and a half high, well built, comfortable and arranged for convenience. The weight of the houses is from 15 tons up. The windows are left in all of them, and so perfectly was the trailer designed that there is not the slightest jar in any part of the journey, and not a window cracked except when passing through the city of Cadillac the limbs of shade trees along the streets broke one or two occasionally.

The 11-mile trip is made in about 4 hours, although loading and unloading and passing through the city required a longer time than that, as it is often necessary to remove the electric light and telephone wires to allow the house to pass under.

At the time this article was written the

were more or less wrenched and pulled apart.

This wholesale migration and the methods used in making it possible have attracted widespread attention and many magazines have described the methods and machinery used.

#### Description of the Trailer

The trailer is constructed with a framework of heavy structural steel beams. A channel and I-beam platform, raised 18 inches above the trailer frame, and rigidly connected to it, transfers the load at the forward end of the trailer to a rocking fifth wheel mounted on the truck. This construction eliminates all twisting stresses from the trailer proper.

The trailer frame is supported at the rear by four steel truck wheels abreast, equipped with solid rubber tires. These wheels are placed under the trailer in such a position that approximately 75 per cent of the weight of the trailer and load is carried on them, making it possible to carry a very heavy load on the trailer without overloading the truck used for motive power.

The trailer is designed to safely carry a maximum, uniformly distributed load of 35 tons, and the complete unit (trailer and truck) weighs approximately 12 tons.

The trailer proper is 24 feet wide by 42 feet long. It consists of five longitudinal members of heavy section structural steel, securely held in place by two main and four supplementary transverse beams. Diagonal cross braces are built into the frame to distribute the stresses where excessive weaving and twisting would occur.

# Lumbermen Get After Compensation Board

*Several Points Raised at Annual Meeting of New Brunswick Association  
—Officers Elected for Coming Year and Important Issues Discussed*

J. W. Brankley, Chatham, N.B.  
The Retiring President

The annual meeting of the New Brunswick Lumbermen's Association which was held on March 28th in Moncton at the Brunswick Hotel, was largely attended, representatives being present from various parts of the province. A number of interesting matters came up for discussion and among them was the application of the Workmen's Compensation Act in particular as it effects the lumbermen and also as it relates to employers generally. Freight rates and the cost of materials were also talked over and the outlook for the present year reviewed.

Angus McLean, of the Bathurst Company, Limited, Bathurst, was elected president for 1923; Howard E. Beedy, of the Nashwaak Pulp & Paper Company, Limited, St. John, was

made vice-president, and Robert W. McLellan, of Fredericton, was again appointed secretary-treasurer.

The Executive for 1923 is composed of Donald Fraser, Plaster Rock; J. Fraser Gregory, St. John; William Richards, Campbellton; Angus McLean, Bathurst; W. B. Snowball, Chatham; J. W. Brankley, Chatham; J. H. Irving, Buctouche; T. H. McEvoy, Dalhousie; George H. King, M.P.P., Chipman, and Howard E. Beedy, St. John. The new members of the Executive are J. Fraser Gregory, of Murray & Gregory, Limited, St. John, and Howard E. Beedy, of the Nashwaak Pulp & Paper Company, St. John.

## President Reviews Trade Conditions

J. W. Brankley, president of the New Brunswick Lumbermen's Association, was not able to attend but in his address reviewed many matters of importance to the industry. He sent the following message which was read:—

Let me call to your attention that this is the sixth General Meeting of the Association since our organization in July 1918. The gathering is unique in that we have not previously had the attendance of non-members at our deliberations.

I, therefore, desire to extend a hearty welcome to such lumbermen and representatives of the mining industry who have favored us with their attendance today. It is my hope and desire that they will recognize the importance of joining with us to help solve the difficulties which we jointly have to contend with. Our membership is not nearly what it should be. I would, therefore, like to urge a large addition to our numbers as a result of today's meeting. We need your assistance.

In common with others, the lumber industry from early in 1920 suffered heavy reverses. Not until about the end of last year did we begin to see signs of improvement. During this period we have suffered many business troubles, but in the whole the lumber industry has come through fairly well.

It is a pleasure to think that the year 1923 promises better results than we have been in the habit of expecting for a very long time. While prospects are not altogether clear, I think that good business judgment should show up a nice margin of profit on the year's business. We have, however, to consider the onerous extra overhead charges of the Income Tax and Sales Tax to say nothing of those irritating, exorbitant and ever present Stamp Tax and Receipt Tax, and last but by no means least the enormous burden of carrying Workmen's Compensation Cost as taxed and administered by the New Brunswick Compensation Board.

During the war, and ever since, nearly every business has had its added burden of taxation. But the lumbermen of New Brunswick and our friends in the mining business have no doubt been more

heavily hit by the charges and impositions of the N. B. Workmen's Compensation Act than any other industry. Although our efforts to mitigate this unjust and extravagant tax have not yet been crowned with success, I believe that the very considerable effort consistently put forth during my term of office to secure some measure of relief will yet bear fruit. I would, therefore, strongly recommend to my successor and the new Executive to continue this good work along lines at present contemplated, which I hope will be fully enlarged upon and explained to this meeting.

There are other and further tasks to be taken up for the general benefit of the industry. In this connection, I ask the assistance and co-operation of all lumbermen. You can assist in no better way than by enrolling as members of N.B.L.A. In "unity there is strength."

The destruction in our forests by the bud worm cannot be remedied, but our great enemy—Fire—in timber lands and plant can and should be guarded against. In this respect a great deal can be accomplished by intelligent and united effort. I hope there will be discussion on this subject, and particularly as to the advisability of fire protection being placed under the control of the limit holders.

Then there are further matters to be dealt with relating to stumpage reduction and the adoption of a more equitable scale such as the Quebec scale and methods of scaling. It would take too long, and I would weary you by going into detail on these important subjects. Sufficient, therefore, to say that these matters have received the attention of this Association which has pressed for favorable consideration on the Minister of Lands and Mines and the Government. Although we have been promised such consideration these promises have been ignored and we have, thus far, been treated with scant courtesy. Again I would recommend that we keep up the good work in these respects.

The foregoing are but a few of the tasks to be grappled with by the Association, and I think the mention of them sufficiently points out the necessity of this organization continuing as a live and active body.

I cannot close without referring to the late lamented death of one of our esteemed members—Mr. Fred Anderson. Since its organization, and until death silenced his voice, he always took an active and intelligent part in the work and deliberations of this body. His passing is a great loss. We revere his memory and express our sympathy to his sorrowing family and friends.

I sincerely regret that circumstances over which I have no control prevent me being with you today. I hope however that you will have a large and successful meeting and my best wishes are

Angus McLean, Bathurst, N.B.  
Newly Elected President

R. W. McLellan, Fredericton, N.B.  
Re-elected Secy.-Treas.

W. B. Snowball, Chatham, N.B.  
Member of the Executive

J. Fraser Gregory, St. John, N.B.  
Member of the Executive

Donald Fraser, Plaster Rock, N.B.  
Member of the Executive

with you. I will close by saying that not only do I esteem the honor you conferred upon me by placing me at the head of the Association for the past year, but also that I shall continue to give it my best effort in future.

For the first time in a number of years several representatives of the mining industry met with the lumbermen, at the invitation of the latter Association, as the mining industry have been having troubles through the Workmen's Compensation Board, the same as the lumber operators.

Amongst those present at the meeting were:—Messrs. Donald Fraser, Senator Black, Miller, Priest, Burchill, O'Brien, Fenderson, Schryer, Gregory, Snowball, Sinclair, Blackball (representing Stetson, Cutler & Co.), Richards, McEvoy, Patterson, Holly, Streeter, Beedy, Irvine, McLean, Ritchie, McLellan and others identified with the lumber industry, and Messrs. A. D. Taylor, Wood and Coll representing the mining industry.

The Canadian Manufacturers' Association lately have been active and endeavoring to have the manufacturers, including lumbermen, form a general association under the provisions of the New Brunswick Workmen's Compensation Act.

The question of the lumbermen joining this proposed Association created considerable discussion at the meeting. It was finally resolved that "we as lumbermen stand apart and do not join such proposed organization but that we continue as our own Association and seek recognition thereof under the terms of this Act." The New

Brunswick Lumbermen's Association has been asking recognition of its industry under the terms of the Workmen's Compensation Act for, at least, two years, but so far without success. The Association has strong hopes, however, of being recognized at an early date. When such or any organization is recognized under the Act, Section 77 of such Act provides as follows:—

"Where any Association shall make rules for the prevention of accidents in the industry or industries represented by such Association, such rules shall, if approved by the Board, be binding on all the employers included in the class, sub-class or group represented by such Association whether or not such employers are members of such Association."

During the meeting it was pointed out that it would be of great benefit to the lumberman of the Association to be in a position to make rules and regulations for the guidance of the industry, as referred to in the section already quoted.

#### Some of the Amendments Desired

For several years the New Brunswick Lumbermen's Association has not been satisfied with the present Workmen's Compensation Board, and has appeared before the New Brunswick legislature on more than one occasion, asking for amendments covering the following:—

"(1) Board to be judicial or failing this that employ-

# *Economic Side of Farming and Lumbering*

*Correspondent Says that for Every Blessed Thing Farmer Buys Other Fellow Fixes the Price—How Law of Supply and Demand Governs the Value of Forest Products—Some Important Adjustments Will Have to be Made in Relative Cost of Things*

There are many economic theories and theorists at the present day. There are savants who can tell what is wrong with conditions in the world but cannot themselves remedy the existing state of affairs or correct long-standing abuses. They affirm that all of us are victims of circumstances or hedged in by restrictions and exactions which, apparently, we have no power to shatter.

In times of prosperity those resident in the city look askance at the solid, well-to-do farmer and perhaps make sinister references to the exorbitant prices obtained by the tiller of the soil for his products. Aspersions are cast upon the alleged profiteering of the yeoman who, in turn, passes the censure on to the capitalist. The capitalist tosses it to the laboring man and the latter, not to be outdone, gets after the wholesaler, the middleman or the commission chap, and thus we have a chain of incidents or amimadversion as long as Jacob's ladder.

The greatest indoor and outdoor sport at the present day is "passing the buck." Some may term it side-stepping and others putting the onus on the other fellow. The result is the same. Dodge duty or shift responsibility on someone else, and in case anything goes wrong, be sure you get out before the collapse comes. Follow the lines of least resistance and look out for No. 1, and if the hindmost is not quite so lucky, why he is to be pitied. How often the platitudinous remark is made,—“Oh well! He has only himself to blame. He should have known better.”

## **Makes Plea for Canadian Farmer**

All this, however, is aside from the economic question of who regulates the prices for the commodities that are bought. Is it the trusts or monopolists, the manufacturer, the wholesaler, the consumer, the foreigner, the labor unions, outside competitors or the old problem of supply and demand. Everyone is inclined to believe that his own theory is correct and that he can put his finger on the vital spot.

A leading captain of industry, writing the "Canada Lumberman" the other day, drew attention to a phase in business conditions very similar to the point raised by J. F. M. Stewart, of Toronto, in an address before the Wholesale Lumbermen's Association in October last. Mr. Stewart at that time made a strong plea for the farmer and for increased immigration. In order to lighten the burdens of Canadian taxation, he said that if we could induce two million people to come to the shores of the Dominion within the next ten years—and this was by no means a wild wish—it would reduce our per capita debt 20 per cent, would increase our national production 25 per cent and would add to the earnings of our railways 25 per cent. He maintained that Canada, being a country of enormous distances, must have the cheapest possible freight rates, not only for grain but for general merchandise, and that one highly organized class of labor had no right to stifle the business of the whole country.

All this leads up to another observation made by a well-known captain of industry from the State of Michigan, who, in writing the "Canada Lumberman" the other day on the condition of rural communities, said,—“To be sure wheat prices are better than they used to be. Wheat is selling to-day for less than cost, if one figures interest on the investment.”

Then the writer proceeds to present some rather startling facts to the advantage of labor and the disadvantage of the tiller of the land. “Yes,” he asserted, “the farmer never seems to realize that his cost is pretty largely attributable to union labor. For every blessed thing the farmer buys the other fellow fixes the price; everything that the farmer sells, the other fellow fixes the price. The price of his boots and shoes is fixed by labor unions of Massachusetts; his clothing by the unions of the cotton spinners, the woolen workers and worst of all the garment makers; everything that is shipped into him or shipped out, the freight rates are fixed by the labor unions. These hogs make everything high that they have to sell and they kick and raise hob if the food is high that they have to buy. The farmer's coal price is fixed by labor unions, and yet with

it all the farmer never seems to revolt and he generally turns in and votes or works with some labor union, fancying that they are pals of his instead of enemies. One of these days the farmer will wake up and these labor union chaps will have to take the same medicine that the farmer has had to take.”

## **The Relative Value of Wheat**

Mr. Stewart gave utterance to the same expression when he declared that the farmer was particularly concerned with the purchasing power of his wheat. He drove home some pertinent facts by adding that it is not exactly how much a bushel the farmer receives for his wheat but how many bushels of wheat it takes to buy a binder, a suit of clothes, a pair of boots or whatever he may require. Mr. Stewart said “Take the relation of wheat to boots. Some three years ago a reasonably good pair of shoes for the use of the farmer could be purchased for \$3.00 or say, four bushels of wheat. The price went up until to-day it would probably be \$8.00 or \$9.00 or nearly twelve bushels of wheat. Owing to world conditions wheat may be too cheap or, due to local as well as world affairs, footwear may be too dear, but the fact remains that the spread between the value of the farmer's staple crop and a great many things he has to buy, is too great.” Mr. Stewart pointed out that wheat must go up or commodities go down or, in other words, values must much more nearly approach before the farmer is again a money-maker.

Using another illustration, Mr. Stewart referred to the purchase or building of a home and added,—“Take the cost of a house to-day and compare the cost in bushels with pre-war times and conservatively it would take three thousand bushels to give the farmer the same home that fifteen hundred bushels would give him formerly.”

## **Important Adjustments to be Made**

It would seem that the difficulties of the farmer to-day clearly show that there must be an important adjustment as between the profits of the farmer and the cost of living as represented by the price of manufactured goods in which labor is the dominant factor, before a healthy situation is established.

And again it would appear that the farming community has as good a right to organize into guilds, federations, associations or whatever name it may be called, as any other body. Self-preservation is supposed to be the first law of nature, and, while agriculturists have been rather tardy in adopting and recognizing the great get-together movement, they have, at least, manifested their strength and cohesion in political and business organizations, and hope in the future to have some say in fixing the prices which they receive for their products.

While the foregoing thoughts are not intended to be a defence of the farmer, still it must be recognized that the observations made by the persons quoted are worthy of serious attention. Much will, of course, depend upon the viewpoint, whether we are on the outside looking in or on the inside looking out, but the subject is worthy of discussion and analysis. It is hoped that the farmer may, before many months, receive a better price for his product, for, after all, agriculture is the greatest industry in Canada to-day. There are three hundred million acres fit for farming land in Canada, of which one-third is in farm holdings, and only one-sixth is cultivated. Two hundred and fifty million acres await the plough or tractor on the land. The value of the wheat crop in 1921 was \$931,000,000, against \$962,000,000 in 1922. When wheat strikes a high value then Canadian prosperity is at its zenith and all the other articles of business life flow full and free.

## **But What About Lumber Prices?**

In the matter of organization it has been charged by some, who are not in sympathy with any trade movement, that lumbermen come together and set the figure for their goods. In no gatherings of associations are prices of lumber ever discussed or fixed. Nothing could be accomplished in this direction because the very

nature of the great pioneer pursuit precludes it ever becoming anything in the way of a monopoly or combination. The industry in its scope is one that is globe encircling; its activities are free and far flung and know practically no boundary lines.

If a district produces a certain amount of timber, then could not the producers of that particular species of wood get together and advance the price extravagantly or speculatively? No. They cannot for they have no way of "cashing in" on the receipts or cutting a melon.

Why? The answer is simple and direct because within a few hundred miles, there are other woods equally as adaptable, serviceable and useful to take the place of the timber on which it is sought to create "a corner." The whole bottom of things thus drops out of such money-making propositions.

Prevailing quotations in the forest products arena to-day are governed by supply and demand and regulated in no other way. The hemlock and jack pine of Ontario must meet the competition of southern pine, gum, Michigan hemlock and B. C. spruce and Ontario hardwoods are up against those from the south. In this connection it is advisable to quote from an address delivered by A. E. Clark, of Toronto, former President of the C.L.A., at the recent convention in Montreal.

Along with other delegates he spoke strongly against a runaway market and speculative values. Reverting to prices on hardwood and the situation in Canada, Mr. Clark drew attention to the fact that all the cut which could be turned out in the Dominion was comparatively small and had very little or no appreciable effect on prices. He said as far as Northern hardwoods were concerned—(and the same observation may be made respecting softwoods in the Dominion) they could be substituted by Southern hardwoods of which great quantities were produced. The average yield per acre in Canada was about 1,500 feet of hardwoods while, in the South, from 3,000 to 4,000 feet were secured from each acre. Operations could be conducted for only a few months every year in the Dominion while in the South logging was practically an all the year round proposition. In the Western and other states, transportation facilities are also better by reason of the large number of branch railway lines. If the supply was short in Canada, in six weeks the South could produce enough to meet the deficiency. They were much greater producers than we were and largely regulated the price situation. In view of those circumstances it was a mistake to advance unduly the price of hardwoods or take advantage of any existing shortage which could soon be overcome owing to the reasons already outlined.

### Quebec Pulpwood Dealers Short of Cars

Quebec pulpwood brokers and shippers make the statement that their export trade with the United States continues to be handicapped on account of the shortage of railway rolling stock. They say that they have among them contract orders for approximately 50,000 cords of pulpwood for shipment to the American paper mills, which they are unable to move for want of railway cars. This does not only refer to the filling of orders from the American mills, but, likewise, Canadian plants due to the shortage of rolling stock in connection with Canadian railways, especially the Canadian National Railway System. Many freight cars are in the United States which the Canadian railways are having the greatest difficulty to get returned. The cold and stormy weather which has affected the American railways is another factor responsible for the embargoes. In the meantime the American mill purchasers of the wood are urging the Quebec shippers to move the supply they have contracted for with the least possible delay and are offering a bonus of \$1. per cord for immediate shipment.

It will be remembered that the American mills have been obliged since last fall to manufacture paper from imported pulp. This was compulsory on account of the shortage of water in the American rivers and dams, which held up the wood from reaching the intakes and grinders. These conditions have changed, the rivers are now deeper in volume of water and the mills are making paper from pulpwood. Truly realizing that their stock of wood will soon be exhausted they are anxious to replenish their supply as soon as possible from Canada, which has had the effect of an increased demand on the Quebec dealers who are doing the utmost to comply with their contracts and urging upon the railroads to help them out, with indifferent results.

In the meantime, the price of wood has advanced to \$21 per cord and the Quebec dealers are of the opinion that the figure will reach \$25 before next fall. In consequence they are not anxious to sell at present, and the Quebec brokers are buying and storing wood from the farmers in anticipation of this advance. It also appears that the Canadian pulp and paper mills are in the market to buy up consider-

able pulpwood. The Brompton Pulp and Paper Co., have purchased all the wood available along the line of the Quebec Central Railway, approximately 25,000 cords. The Donnacona Pulp and Paper Co. are buying wood in the eastern part of the Province of Quebec, in large quantities, and the Riordon Pulp & Paper Co. are also out to acquire quantities. In this connection the Quebec pulpwood dealers express the opinion that the time is not far distant when the Canadian mills will require such pulpwood supplies that there will be little left to sell to the American mills, a turn of events that is pleasing to the Quebec pulpwood selling interests who do not hesitate to state that they would rather deal with Canadian than with American mills, giving the reason that they obtain better measurements from the Canadian mills and more satisfactory financial adjustments.

The Quebec lumber firms are experiencing the same difficulties as the pulpwood dealers as regards the shipment of lumber to customers in the United States. They have a large quantity of manufactured lumber in their mill yards ready for shipment and are unable to obtain the freight car service for transportation. Their books are crowded with orders from the United States.

### Outlook for West Coast Forest Products

Respecting the demand for B. C. products in Eastern Canada, a well-known representative of a leading Coast firm in conversation with "Canada Lumberman" recently, said:—No marked change has taken place in the British Columbia lumber market within the last month. There is every indication that the confident and buoyant attitude, which has been manifest in the West since the first of the year, will continue for several months. Every tide-water mill is heavily booked with export business. In fact, there is no dearth of business from any market whatever; the important consideration is that of picking the most desirable.

The new price list which has now been fairly firm for about six weeks is still maintaining a solid front but this is no indication that the West Coast mills are making exorbitant profits. The advances in lumber have been followed by corresponding advances in log costs and it is still a difficult problem for the manufacturer to keep pace with higher log and labor costs.

There are several factors which will serve to indicate that we cannot expect any falling market for some time to come as far as the West Coast is concerned. Among these is the splendid program of building that is undoubtedly in sight this year. Then the C.P.R. have completed arrangements for the building of an immense pier which will require four million feet of Douglas Fir and which will take the best part of a year. Together with this there is the big dry dock in the figuring stage which will require five million feet. The railways are still calling for heavy quantities of car material; Atlantic schedules are still being placed at very attractive prices and the U. S. market is continuing to pay excellent prices for the upper end of the log.

Fortunately the alarm manifested a month ago in regard to a runaway market, has passed. The severe storms which have taken place all over the continent, especially in the East and North, have stopped retail buying for a few weeks and the manufacturer has been enabled to catch up with some of the business on the books. This, together with increased production, is serving to maintain a check on any abnormal tendencies that the market might be inclined to show.

The much heard of talk about the first six months of this year being good business is beginning to spread itself to talk of the entire year being favorable to everyone concerned. It is sufficient to say that there are many conditions appearing at the present time which show that the lumbermen are only on the threshold of better business and that a good twelve months is ahead of them.

The most noteworthy feature of the market at the present time is that stability can be seen in every direction and the danger of prices becoming too wild has passed.

### Better Outlook for Pulp Wood Demands

The past year was the most active in the pulpwood camps of Ontario of any since 1919-20, which was a boom period in the forest products industry. The great amount of wood taken out betokens a prosperous year. All the paper mills not only put in many camps themselves but made arrangements with contractors, logging firms and others for an unusually large cordage of pulpwood. The "wood pile" of some of the big paper organizations which was built up on a high-cost product, has in the process of production and liquidation been pretty well used up, and now far-seeing concerns believe that contracts may be safely made for fresh supplies as it is doubtful if operating expenses will be any lower than they are at the present period. The trend is all in the opposite direction.

# How Hardwood Men Would Conserve the Timber

## *Vastly Better to Conserve what Stands To-day than to Waste and Endeavor to Make it Good by Replanting Trees and Other Reproductive Measures*

An interesting statement was recently made before the United States Senate Committee on Forestry at one of its sittings, by Landon C. Bell, of the Committee on Forestry of the Hardwood Manufacturers Institute. He set forth in convincing terms what the hardwood lumbermen desire, the principal features of a policy they believed wise and for the accomplishment of which he said, they would gladly do their share. As outlined by Mr. Bell the propositions were as follows:—

They believe a wise forestry policy would contemplate as one of its principal features adequate protection of the timber areas from fire. They are of the opinion, however, that some of the measures often proposed in respect to fire protection are wrong; for example, compulsory burning of brush, leaves, laps and combustibles is often urged.

It is, they contend, indisputable that the land would be better protected, and the flow of water better controlled and reforestation would take place much more rapidly in the hardwood areas, however, it may be elsewhere, if the brush and leaves and laps were not destroyed, but were allowed to rot and enrich the land. The rate of growth of trees naturally depends to a considerable degree upon the fertility of the soil and the continuous presence of moisture. It is doubtful if any available information as to the rate of growth of our original growth hardwoods, would fairly reflect the rate of growth which would be attained by new growths of trees in territories "protected" from fires by the destruction in advance of the combustible materials upon the land, in the shape of leaves, brush, laps, and so forth, which should furnish a cover and a part of the sustenance and fertility to speed the growth of trees.

Fire should be prevented and controlled to the fullest extent possible, but the natural cover and means of fertilization should not be deliberately destroyed, because perchance serious destruction might result if the fires should accidentally occur, or stockmen or others deliberately set them out in order that better grazing might be had.

It would seem the wiser course to provide more strict patrol to protect the forest areas, and more severe penalties for deliberately or negligently causing fires.

It is believed that a system of fire patrol would be the wisest and most effective way of preventing forest fires, and if in addition somewhat stringent laws were enacted, designed to prevent and punish the causing or permitting of fires purposely or negligently, the maintenance of entirely satisfactory conditions for reforestation would be assured.

### Should Leave the Seed Trees

They believe that sufficient seed trees should be left uncut. Usually enough are left of the unmerchantable to make it unnecessary to leave any others. When, however, sufficient are not thus left, others should be selected and left uncut. The lumbermen do not believe that it would be wise or desirable for trees of all varieties to be left, but they should be confined to a limited number of the better and more valuable varieties, best adapted to growth in the particular hardwood section.

The question, however, of the practicability of private reforestation is an economic problem. The real question is, can private owners of cut-over hardwood lands continue to own them, and adopt measures in the expectation that reforestation as a private matter will ever be successful economically? Probably 75 per cent of that problem is involved in the question of taxation.

They believe that the Federal Government should on a large scale, acquire and assume the expense of reforesting lands suitable only for growing hardwood timber. But this policy should not go to the extent of depriving private parties of the right and opportunity, if they desire, to keep their lands and reforest them. If and when changes in economic conditions become such that private reforestation of hardwoods may be profitably engaged in, the Government should leave the field of such endeavor, so far as possible, to be occupied by private owners.

They believe that the same policy ought properly to be pursued to the extent found practicable by the states.

It is suggested also that a similar course may be found wise

and practicable in some instances for municipalities. In such instances the enterprise need not be confined to lands suitable only for growing hardwoods. The question of accessibility will be of importance in connection with the use thereof for parks, game preserves and refuges.

They believe that those states whose forests have been depleted in the past should give, as state enterprises at the state's expense, special attention to reforesting the areas suitable only for growing trees.

They believe that forest resources would be greatly conserved by the result of careful scientific research with a view to improving manufacturing methods through improved machinery and manufacturing processes. This field of investigation and experimentation is one which while primarily for the lumbermen is such that they individually cannot fully exhaust it. It is almost equally impossible for the lumbermen collectively to deal effectively with the subject. It is one which it would seem is peculiarly of the character to which the government through some appropriate instrumentality should give attention.

There are those who believe that in the years to come more and more hardwood lumber will be produced by the small circular sawmill operating wood lots, or comparatively small units of stumpage. The quantity produced by the circular sawmills at the present time is no inconsiderable part of the total output.

### Saving in the Kerf of Saws

The band saws cut a kerf about 1/8th of an inch thick; the circular saws have a kerf of about 3/8ths of an inch. In sawing any given quantity of logs, there is therefore a difference of about 25% in the amount of lumber produced dependent upon whether the logs are cut by a band saw or by a circular saw. Undoubtedly for every dollar the government might spend in research work on such subjects, it would secure greater returns than if invested in any other conceivable way in connection with the entire subject.

It is vastly better to conserve what we have, by elimination of waste and better utilization, than to waste and endeavor to make it good by replanting trees and other reproductive measures.

No more important enterprise has ever been undertaken by the lumber industry within its entire history than the development now going forward with such splendid progress and promise under the guidance of the Central Committee on Lumber Standards. The achievement of its purposes in respect to simplification and standardization including better grade rules and a standardization nomenclature, in other words, the development of a universal and scientifically conceived system of Lumber Standards, it is believed will result in the saving of more lumber in a decade than will be produced by reforestation processes in a century.

It is estimated that in the hardwood industry alone a better grade formulation, universally accepted would result in an annual saving of at least 500,000,000 feet through waste elimination alone.

Students of the subject have estimated that by such means we can save 1,000,000,000 feet of hardwood lumber more easily and cheaply than we can grow 100,000,000 feet.

### Improvement in Manufacturing Methods

The lumbermen favor, and believe that there should obtain a helpful, co-operative attitude toward them on the part of the government; that they should be aided and encouraged in their efforts to secure adequate statistical data in order that manufacturing processes and protection may proceed intelligently and economically instead of blindly and wastefully.

With the vast number of species of hardwoods (well over 50 of prime importance), and the great variety of thicknesses and sizes into which they are cut, it is impossible to fit production to consumption without knowledge of the volume of production, stocks, consumption and market conditions. These things are vital to the intelligent conduct of business.

A wise policy in this regard will have a most important bearing upon the immediate subject, for in the absence thereof enormous quantities of timber that ought to be conserved and utilized will be put into forms of production not needed and eventually wasted.

While the government has shown a fine spirit of co-operation

toward the farmer, the cattle raiser, and others respecting grain, cotton, cattle, etc., and aids them in every possible way by collecting and supplying at public expense currently and promptly the statistics respecting these things, yet not only does it not do anything of the kind for the lumber industry, but its policy has been one of critical opposition to the lumbermen's efforts to supply this efficiency by their own co-operative efforts at their own expense.

The policy of the government in this regard is indefensible and wrong, and should be corrected. It is not only hurtful to the manufacturers, but detrimental to the interest of consumers and the public, making waste and lack of economy unavoidable and inevitable.

The hardwood lumbermen favor a broad constructive, national forestry program. They desire that the question be settled right and be settled definitely now so far as this is possible. There is no adequate knowledge of the subject as applies to our conditions. It cannot be said that in the hardwood territories the subject is further advanced than the inception of the experimental stage.

They believe that a policy which may embody impractical plans and oppressive measures, such as are included in some of the suggestions which have been made from time to time in the past would carry within itself the seeds of its own failure and destruction, and the interests of the industry and the nation be irreparably injured thereby, and real constructive accomplishment indefinitely delayed.

At its annual meeting in New Orleans, the National Lumber Manufacturers Association adopted a resolution or declaration of principles, and statement of its views on this subject of a Forestry policy. The hardwood manufacturers approve entirely the action taken, as expressive of their views and what they believe to be the views of lumbermen generally.

### Lamentable Story of Timber Shortage

The annual report of the Department of Crown Lands of Nova Scotia was recently submitted to the legislature. The net surplus for the last fiscal year was \$33,453.45. Against the total receipts of \$41,341.21 is charged \$7,887.76 for salaries, surveys, refunds and other expenses.

In a recent editorial a Halifax paper says that there is apparently little to do now except express regret that provincial administrations during the last fifty years have practically wiped out the timber estate of the province as an asset of value and a revenue producer. If the interests of the people had been served, it adds that the timber areas would now be competing with the coal areas of Nova Scotia for first place as a provider of revenue. Notwithstanding the teaching of history, the warnings of far-sighted men and the suggestions which must have at times appealed to the successive governments of the province, improvident methods prevailed and bit by bit the asset of the people was given away until there is practically nothing remaining. The climax of the whole matter was reached last year when an announcement was made that the remaining Crown Lands were withdrawn from either lease or sale. It seems, however, that what Crown Lands remain are of no use either for settlement or lumbering.

The paper concludes,—“This is a lamentable story of the dissipation of one of the splendid heritages of the people of Nova Scotia, and nothing is being done to replace it.”

### Makes His Office Advertise His Business

There are many retailers in Ontario who know Mr. Robert C. Restrict, the present head of the Restrict Lumber Co., of Detroit, Mich., one of the most aggressive and alert retail concerns in the City of the Straits. Mr. Restrict has always taken a deep interest in the affairs of the Ontario yard men, and, at the annual meeting of the South-Western Ontario Retail Lumber Dealers' Association, held in Sarnia a couple of years ago, he gave a forceful address. He also was one of the party of 150 on the midsummer outing up the lakes last June with the Ontario, Michigan and Ohio yardmen.

Mr. Restrict's firm has just completed a handsome new office in Detroit, and every type of wood the company has for sale is embodied in the interior finish. When it was decided to erect the structure the members of the organization declared that the office building should be an advertisement of its lines of business and an edifice was planned to set forth the beauty finish and attractiveness of the various woods sold. Thus the office is proving, not only a good publicity medium but a working factor in the sales policy of the firm.

Many people have a very vague and indefinite idea of what certain woods look like and there is nothing like the eye for conveying impressions or, for that matter, closing business transactions. The Restrict Lumber Co. believed that it could do some propaganda of its own in this direction as it knew that when a builder or archi-

tect spoke of “clear oak flooring” or “No. 1 quarter-cut,” he had only a hazy conception of what it meant. The firm was of the opinion that it would be of great assistance to contractors, builders and others if a permanent display was made where every patron might easily become acquainted with the different materials and the various finishes.

The Restrict Lumber Co. has always believed in original and effective advertising. It has used readers in the daily papers and employed billboards, street car labels, direct-by-mail and other live methods. It has followed this policy from the beginning and it is one which has carried weight.

Nearly forty years ago the late Charles W. Restrict, possessing a few hundred dollars, the title to some vacant lots, a sympathetic, helpful wife and an unlimited supply of determination, decided that he would get into the retail lumber game. He found trade rather tardy at first and his complete delivery equipment consisted of a wagon and a half blind horse which remained idle in the stable a good share of the time. In the winter, after a heavy fall of snow, young Restrict would drive “Blind Betsy” around and about the yard. This made it appear as if the firm was doing a whale of a business. The resourceful lumber merchant soon became talked about and one person told others how well Restrict was getting along.

Impressions are lasting and their influence spread. What is the result? To-day the Restrict Lumber Co. has a fleet of ten motor trucks and thirty trailers which are kept busy serving the users of wood products in Detroit and environs. This article, however, is not intended to be a write-up of the Restrict Lumber Co., but to serve merely as an illustration of what force, foresight and concentration will accomplish when linked up to effective advertising and intelligently and industriously applied.

Mr. Restrict, Sr., passed away some years ago and the business is now conducted by his sons, who know how to make good use of every medium. Early in March the grand opening of the new office was held. There were eats, music and smokes, and everybody came for lunch, including architects, builders, contractors and other lumber buyers. An outstanding event was “no speeches.” The day before the reception a “Restigram,” which closely resembled an ordinary telegram, was sent out to the entire mailing list of the firm. On this message were the slogans—“Restrict Certified Lumber,” “Lumber of Lasting Quality,” “Speedy Service to All Detroit.” It was also pointed out that lumber service was given to the contractor, the builder, the manufacturer and all users “who want everlasting quality as well as price.”

### Production of Lumber in United States

Washington and Louisiana led in lumber production in 1921, according to a recent report of the Department of Commerce, which publishes preliminary statistics compiled by the Bureau of the Census in co-operation with the United States Forest Service.

Mississippi is third on the list and Oregon, which was second in 1920, takes fourth place in 1921. It is impossible to tell from the preliminary report whether this is due to actual conditions or whether the reports for the southern states are more complete.

The total lumber cut, as reported by 15,731 mills in 1921, was 26,991,798 M feet, compared with reports from 15,987 mills in 1920 with output of 29,878,360 M feet.

Comparative figures from reports follow for the six leading states and species:

	Mills	1921	Mills	1920
		Lumber Cut M feet		Lumber Cut M feet
United States .....	15,731	26,991,798	15,978	29,878,360
Washington .....	547	3,834,314	584	5,524,509
Louisiana .....	341	3,215,110	271	2,719,761
Mississippi .....	920	2,081,520	648	1,677,469
Oregon .....	390	2,026,502	659	3,316,098
Texas .....	301	1,502,333	232	1,177,436
Alabama .....	883	1,397,180	903	1,108,188

	Per cent of distribution	1921	Per cent of distribution	1920
		Lumber Cut M feet		Lumber Cut M feet
Yellow pine .....	41.4	11,165,788	30.0	8,964,313
Douglas fir .....	17.2	4,642,827	23.3	6,956,683
Oak .....	5.9	1,597,435	6.2	1,853,580
White Pine .....	4.7	1,269,697	4.6	1,377,327
Western yellow pine .....	4.6	1,244,583	7.6	2,270,898
Hemlock .....	4.4	1,195,414	5.6	1,686,320

A minister, with two lovely girls, stood entranced by the beauties of a flowing stream. A fisherman happened by and mistaking the minister's occupation, said: “Ketchin' many, pard?”

“Sir,” I am a fisher of men.”

“Well,” replied the fisherman with an admiring smile at the girls, “you sure have the right bait.”

## Grow Rock Maples on Every Hillside

During the debate on the Budget in the New Brunswick Legislature at Fredericton on April 6, Hon. C. W. Robinson, Minister of Lands and Mines, gave an address teeming with sound suggestions as well as valuable information, especially on crown lands. The Minister said that there are about five billion feet of green softwood, twelve inches and above, and about eight billion under that size on Crown lands. For hardwood the corresponding figures were four billion and six billion. He explained that as a result of the bud worm blight there were left standing about five billion feet on Crown lands and three billion on private lands. Speaking about Scott Guptill's proposal to sell the Crown Lands for \$50,000,000 or less, the minister said he would not like to give his opinion on the matter at this time. True, the revenue now received, he said, was not equal to what the interest might be on the sale price, but he expected that it would soon reach a million dollars a year. He pointed out that the lumber industry was one of the basic elements in the prosperity of the province and he was glad to say that the outlook in the business was brighter.

Hon. C. W. Robinson, Fredericton,  
Minister of Lands and Mines

ter said he would not like to give his opinion on the matter at this time. True, the revenue now received, he said, was not equal to what the interest might be on the sale price, but he expected that it would soon reach a million dollars a year. He pointed out that the lumber industry was one of the basic elements in the prosperity of the province and he was glad to say that the outlook in the business was brighter.

In answer to some criticism offered by Mr. Fawcett, leader of the Progressive party, he said, he was glad that the member had complained that the stumpage rate was too low as the government some day might wish to increase it. He pointed out that the lumbermen of the province had undoubtedly faced serious conditions in recent years. It had been pointed out that the stumpage rate in Quebec was only \$1.60, while in New Brunswick it was \$4 and \$5. When the present government took office, he said, the rate was only \$1.50, but they had gradually increased it to \$5. Last year when conditions became serious the government, on his recommendation, had made a reduction and he felt sure that no mistake had been made.

He also informed the members that the total cut in the province last year had been 191,000,000 feet or 4,974,910 pieces. The average was now about thirty-nine feet to the log and all under sized logs were included. The total cut of lumber during the last eighteen years was 4,046,000,000, or an average of 225,000,000 per year. These figures were based on the records of the Crown Land office.

The Minister said that Professor Pulling, of the University of New Brunswick, had suggested that the department in a small way take up reforestation and he was ready to make a recommendation that such be attempted. The department in this matter would co-operate with the University. The forests, he said, largely replanted themselves but there were tracts, notably along Kane's River, where reforestation could be tried. Soft woods would be planted and also rock maple. The latter was one of the most valuable native trees from the viewpoint of agriculture as its products could be handled at a season when other lines of farming were quiet.

Instead of "sheep on every hillside," he would adopt the slogan of "Rock maples on every hillside." He knew personally of one farmer who secured a greater income from the rock maple trees on his property than he did from the rest of his farm. He remarked that "instead of chasing rainbows and trying to bring into the province industries which were foreign to it, he would direct attention towards those activities which were associated with the natural resources of the province. He pointed out that it was estimated that the maple products of the Dominion of Canada had a total of twenty million dollars. There is no reason, he added, why two or three millions of that amount should not go into the pockets of the people of the province.

## Where Forest Assists to Reduce Taxes

In Switzerland 87 per cent of the forest area is held under town or some other form of communal ownership. In France, 23 per cent of the forest area is so held, and in Germany 15 per cent. In Alsace-Lorraine, nearly two-thirds of the towns own communal forests.

Many of the communal forests in Europe have been under such ownership, with continuous protection and management for many

generations, in some cases for centuries. The city forest of Zurich, Switzerland, is a classic example. This forest, called the Sihlwald, has an area of 2580 acres (about four square miles).

The known history of this forest runs back to the year 853, since which time it has been under some form of protection and management, and has continued to supply forest products for the people. The records of the forest show that in 1460 the appointment of two foresters was authorized.

It is interesting to note the comparative antiquity of forestry in Europe, in contrast with the youthfulness of this profession in America. Prof. R. S. Hosmer, of the Forestry Department, Cornell University, records that the mill in the Sihlwald employs 30 men, and that 120 more are employed in the forest itself, so that this forest alone comfortably supports a small community by itself.

A city woodyard is maintained to supply citizens with fuel. Under normal conditions a substantial profit is derived from the forest, which assists to reduce taxation.

## Lumbermen Get After Compensation Board

(Continued from page 40)

ers be granted the right to nominate one member of the Board, employees another, and the chairman to be appointed by the Government.

"(2) Where the Board refuses to recognize any Association, such Association may appeal to the Lieutenant-Governor-in-Council.

"(3) Failing the granting of Number 1 appear to be allowed from the decisions of the Board on questions of law and fact, but in all appeals on question of fact the appellant to give all reasonable security and, if necessary, be penalized to prevent unnecessary or vexatious appeals.

"(4) Board to publish all their decisions and findings and all their payments in the Royal Gazette.

"(5) A minimum charge of \$50.00 per year to be imposed on each employer.

"(6) Contribution to be made by employees on the basis of a percentage of their pay-roll to cover first aid, medical and hospital expenses for each calendar year.

"(7) Doctors to be compelled to file monthly accounts with the Board for service performed under the Act, otherwise their claims to be barred."

It was decided to have introduced a bill, endeavoring to embody in legislation as many of the foregoing headings as possible. Several members stated that they hoped to have the proposed bill in this respect not only presented at the present sitting of the legislature, but to have, at least, a part of the requirements enacted into law as amendments to the present Act.

The lumbering and mining interests are, it is said, and have been the heaviest assessed under the Act of all the industries in the province, and lumbermen particularly complain that the burden has become practically unbearable. While the mining men have no Association as such, it is probable they will unite with the Lumbermen's Association for the purpose of amending the Compensation Act, since their industry is more closely similar to the lumbermen's than any other. The proposition which manufacturers generally, including the lumbermen, favor in that the beneficiaries under the Act—the employees themselves—should make a fair contribution to the fund, was strongly adhered to at the meeting. The lumber industry is now being assessed four per cent and other industries, it was said, were assessed much less, many of them paying less than one per cent.

Other subjects talked over at the gathering were freight rates and the growing cost of materials, but no action was taken with regard to these matters.

## New Lumber Trade Directory of Coast

The fifth edition of the "A.B.C." British Columbia Lumber Trade Directory and Year Book, which is issued by the Progress Publishing Co., Limited, Vancouver, has just been published. It is a well printed volume of 215 pages and gives a complete alphabetical list of all the lumber, logging, shingle, woodworking, lath and other organizations in the Pacific Coast province. The Directory is a convenient reference book for everyone interested in the lumber trade of Western Canada.

"Who's Who in the Lumber Trade of British Columbia," which is an extensive alphabetical personal index, is admirably arranged. A great deal of other data is also furnished on the customs tariffs, the forest act of the province, the principal trees indigenous to B. C., their ranges and uses, statistic of shipments and production, the B. C. logging scale rates imposed by the Timber Royalty Act, etc. There is also a comprehensive directory of mill and camp supply houses.

## Retailers' Association for Quebec

### Enthusiastic Meeting Held in Montreal Attended by Dealers From All Over Province

A Province of Quebec Retail Lumbermen's Association will be formed. This was decided at a meeting held in the Queen's Hotel, Montreal, on April 5th. The object was to discuss the advisability of forming a provincial-wide association, the meeting being convened by the Montreal Lumbermen's Association. Fifty-two retailers and sash and door manufacturers from all parts of the province attended, these including some of the largest dealers in the province. J. P. Dupuis presided.

The idea of enlarging the scope of the Montreal Association is to secure co-operation between the dealers, it being felt that an association of this character afforded means for an interchange of views, for friendly intercourse and for promoting generally the interests of the retailers. The suggestion for forming an association was very cordially received. It was decided to divide the province into eleven districts with the head office in Montreal. Each centre will, it is proposed, from what may be termed a branch, with representatives on the general board of directors. A committee was appointed to draft by-laws and regulations, prepare reports, and to submit a report to a meeting to be held in Montreal on May 8th.

The following are the eleven districts with their representatives—Quebec City, Messrs. J. O. Chalifour and J. M. Desureau; Three Rivers, A. Dube and C. Burrill; Victoriaville, J. E. Giroux (Victoriaville) and A. A. Caron (Nicolet); St. John, V. Trahan (St. John) and J. B. Carneau (Mariville) Cowansville, J. B. Comeau (Farnham) and R. B. Stevens (Bedford); Sorel, J. Sheppard and J. D. Chenard; St. Jerome, L. E. Parent (St. Agathe) and E. Meunier (St. Jerome); St. Hyacinthe, L. P. Morin and J. Surprenant; Sherbrooke, J. O. Asselin (Bromptonville) and J. G. Ewing (Melbourne); Valleyfield, A. Cossette and J. O. Clermont.

These with the Montreal district, already organized, make up the eleven. The gentlemen named will undertake organization and propaganda work in their districts and report to the meeting on May 8th, when it is probable that the district directors will be appointed.

### Annual Outing of Ontario Retail Lumbermen

The Ontario Retail Lumber Dealers' Association will have their annual midsummer outing on Lake Ontario and down the St. Lawrence through the far-famed Thousand Islands from Thursday July 5 until Monday July 9. The well-equipped steamer "Cape Trinity" of the Canada Steamship Lines, has been chartered for the occasion and will leave Toronto on the afternoon of July 5 for an enjoyable cruise.

It is expected that there will be accommodation for about 250 and that the retail dealers, their wives and families will take advantage of the outing. Visits will likely be paid to Niagara Falls, Rochester, Kingston, Brockville, Gananoque, Presqu' Isle, Twelve O'clock Point, Trenton, Belleville, Picton and other places. One of the features of the trip will be a sail through the Bay of Quinte and the Murray canal. The entire expense of the midsummer jaunt will be about thirty-five dollars for each patron.

W. B. Tennant, of Toronto, is the chairman of the Excursion Committee, and the other members are W. E. S. Savage, Mimico; John Irvin, West Toronto; J. B. Van Dusen, Brockville; J. B. MacKenzie, Georgetown; M. R. Bogart, Chatham; W. M. Tupling, Orillia, and S. L. Lambert, Welland. The itinerary of the trip will be published later.

### More Barnjum Forestry Prizes Awarded

Prizes have been awarded in the Barnjum \$2,000.00 prize contest for the most convincing arguments in favor of prohibiting the export of unmanufactured wood from Canada, as follows: First prize for the best essay in English, \$500.00, went to J. R. Black, 33 Broadway Avenue, Ottawa. Second Prize \$250.00 to Jas. R. Dickson, of Dominion Forestry Branch, Ottawa. Third prize \$150.00 to H. C. Scott, 5 Golf Avenue, Pointe Claire, P. Q. Fourth prize \$100.00 to Fred. Barnes, Belgo Paper Company, Shawinigan Falls, P. Q. For the best essay in French, \$500.00 went to Avila Bedard, Quebec, P. Q. Second prize \$250.00 to Albert Trempe, Quebec. Third prize \$150.00 to Eugene Rivard, Quebec. Fourth prize \$100.00 to Henri Roi, Belgo Paper Company, Van Bruyssel, P. Q.

Mr. Barnjum states that the judges had a most difficult task in awarding these prizes owing to the very high order of the papers submitted, and that everyone of the contestants whether successful in winning a prize or not can feel happy in the knowledge that they have done their country a great service in assisting in the assembling

of the great mass of arguments in favor of prohibiting the export of unmanufactured wood that are contained in these 549 essays sent in from every Province in the Dominion. They not only contain page after page of unanswerable arguments in favor of an embargo but also picture the story of forest devastation and forest conditions in each district from British Columbia to Cape Breton.

Ontario contributed 185 essays. Quebec 79. Nova Scotia 130. New Brunswick 79. Manitoba 17. Alberta 20. Saskatchewan 18. British Columbia 17. Prince Edward Island 9.

These essays both in English and French will be printed in book form in a series of volumes for free distribution and will form the largest and most valuable collection of data ever published on the subject in Canada, a copy of which will be mailed to each contestant as soon as printed. Volume 1 will be off the press in a few days.

### Better Fire Protection in Northern Ontario

Considerable additions to the available equipment has been made for the coming season's work in the north by the Ottawa Fire Protection Service, according to E. G. Poole, supervisor for the Cochrane district. Some of the latest type of gasoline engines with a pumping capacity of from 350 to 400 gallons per minute, have been decided upon and these will be used to protect town and village while they also will be available for use against forest fires in the bush.

Two railway motor cars and a number of trucks will be added to the equipment and the mounted patrol will be enlarged in numbers. The permit system will not be employed in the New Liskeard area this summer, but mounted rangers will patrol the district. Motor boats and canoes will be used extensively to cover the territory.

### The Court Refuses to Grant Injunction

In a judgment given in the Superior Court, Mr. Justice Bruneau, Montreal, decided that an order for an interlocutory injunction could not be given by the court where the law provided another recourse, and he, therefore, dismissed the petition made by E. M. Nicholson in the case of E. H. Nicholson against S. Ouellette.

One of the objects of the petition was to obtain possession of a quantity of lumber over which the action had been taken, and Justice Bruneau pointed out that under the circumstances the petitioner should have taken a seizure in revendication, the aim of which would be to recover possession of the goods in question.

The petitioner stated that he had taken action against the defendant to force the latter to deliver to him 1,489,736 feet of lumber in satisfaction of the sum of \$104,281.52, which had been paid to the Bank of Hochelaga, in excess of value of lumber already delivered.

The case was to be heard in March, but since the inscription of the action the Bank of Hochelaga had taken possession of the wood and was selling part of it, petitioner declared.

Justice Bruneau decided that the petition was not founded in law and dismissed it. The petitioner had also asked for an interlocutory injunction, and this petition had also been dismissed, the costs being reserved.

Under the circumstances Justice Bruneau decided that the petitioner would have to pay the costs of both petitions.

### Mr. White Makes an Explanation

Editor, Canada Lumberman:—

In an article written by me, entitled "The Contract Physician," and appearing in the March 15th edition of the "Canada Lumberman," I cited statistics covering the disease smallpox, and mentioned that the preponderance of cases developed during the years referred to in the districts of Sudbury, Nipissing, and Temiskaming. It was stated the large French-Canadian population resident therein seemed to have provided us with most of these cases.

I wish to call the attention to those of your readers with whom I am not personally acquainted (and who may not be conversant with my views on such a subject) that it was not—and never has been my intention—to cast any reflection upon the French-Canadian population resident in the districts mentioned. Indeed, my actions during the past ten years should bear witness to this fact.

I have the utmost regard for the French-Canadian population of Ontario and believe my work among them has demonstrated a most friendly feeling. I wish, therefore, any readers who may have seen this article to be assured it is my desire to serve this nationality in the same just and sincere manner as in the past—and I believe that this feeling is reciprocated.

Yours faithfully,

Alex. R. White,

Chief Sanitary Inspector for Ontario.

North Bay, Ont.

April 4, 1923

## Hon. Mr. Kaine Joins the Silent Majority

The late Hon. J. C. Kaine, Quebec

Hon. John C. Kaine, M.L.C., a well-known lumber and pulpwood dealer, of Quebec, P. Q., passed away on April 1, after a short illness, in his 68th year. He was one of the best-known citizens of the ancient capital and had a successful business career. Mr. Kaine was born and educated in Quebec and commenced his career, when quite a young man, in shipping circles when the wooden sailing vessel and the timber trade of the port of Quebec was at its zenith. He also became a steamboat proprietor and operated sea tugs and ran passenger and freight steamers in the coasting trade. Of late years Mr. Kaine was interested in the lumber and pulpwood line and canal transportation. Previously, he was contractor for the St. Lawrence buoy

service, and carried on this work for many years between Quebec and Montreal until the federal government purchased the steamer "Shamrock," which the deceased had built at Quebec especially for this service. It is still in the government service. Mr. Kaine built a number of other vessels; some he sold and others he operated. He had a keen general knowledge of shipping and transportation matters acquired by experience and business acumen, and through his entire career, was highly esteemed for his integrity of character. Personally he was a man human in every respect, genial in disposition and ever ready to help a friend. In 1894, Hon. Mr. Kaine was chosen by the electors of Quebec West division to represent them in the local legislature, and the following year was invited by Sir Lomer Gouin, then Prime Minister of Quebec, to accept a seat in his Cabinet as Minister without portfolio, a position he occupied up to the time of his death. On the death of Hon. John Sharples, chief of the Quebec lumber firm of W. & J. Sharples, who was in his lifetime a member of the Provincial Legislature Council, Mr. Kaine was appointed by Sir Lomer to the vacancy in the Upper House, and continued to remain a member of the provincial Cabinet. As a member of this Executive body, he was greatly esteemed by his colleagues and when Hon. L. A. Taschereau assumed office, he invited Hon. Mr. Kaine to remain in his Cabinet.

Mr. Kaine was twice married, and is survived by his wife and two sons, B. J. Kaine, superintendent of Lights and Buoys in connection with the Quebec agency of the Federal Marine and Fisheries Department, and Mark H. Kaine, lumber and pulpwood dealer of Quebec.

## Annual Meeting of Hardwood Institute

The annual meeting of the Hardwood Manufacturers Institute will be held at the Blackstone Hotel, Chicago, on May 10 and 11. The Institute was organized in June 1922 as a national body of hardwood manufacturers and will celebrate its first annual, a period of about eleven months' development. The membership has grown from 70 to about 300 hardwood producers and it is said that the ranks now represent well over one-third of the hardwood lumber manufacturers in the United States. Among those, who will deliver addresses at the annual gathering will be C. H. Markham, president of the Illinois Central Railway, who will talk on organization. He is well known to the lumbermen throughout many parts of the United States.

## Newsy Jottings in the Lumber Industry

The Melrose shingle mill at Crescent Beach, B. C. was recently destroyed by fire.

The Haileybury Lumber Co., Limited, was recently granted a charter and is opening a yard and planing mill in Haileybury, Ont.

W. C. Irvin, of the Irvin Lumber Co., who with Mrs. Irvin has been spending the past few weeks at St. Petersburg, Florida, has returned to Toronto.

E. M. Barrett, of Ottawa, former president of the Ontario Retail Lumber Dealers' Association, returned home recently after spending several weeks in Miami, Florida.

Stanley Siddall, who for several years has been with the Laidlaw-Belton Lumber Co., Limited, of Sarnia, has joined the sales staff of the A. E. Gordon Lumber Co., Limited, of Toronto, and will

cover Western Ontario. Mr. Siddall is well known throughout the industry and is an aggressive salesman.

Theobald Juneau, Glenada, Que., suffered the loss of his sawmill recently when fire destroyed it causing a loss of \$20,000. The owner expects to rebuild in May.

R. Comrie, of Midland, is opening up a retail lumber yard at Scarborough Junction, Ont., under the name of the Comrie-Grierson Lumber Co.

A. S. Nicholson, of Terry-Nicholson-Cates, Limited, Toronto, left recently on a business trip to British Columbia where he will visit a number of mills and confer with the firm's western representatives.

Harry Towns, of Cobalt, who is well-known in the lumber circles of the north, spent a few days recently in Toronto on business. Another recent visitor from Northern Ontario was W. C. Thuerck, of Haileybury.

Premier Drury announced to the Legislature recently that the Ontario Government intends to have an examination made this summer of the Mississauga Reserve and its timber in order to determine if the province would be justified in building a railway into that district.

W. W. Carter, president of the Fesserton Timber Co., Toronto, and Mrs. Carter, who have been spending several weeks at St. Petersburg, Florida, have returned home. Mr. Carter, who had been in rather poor health previous to his trip to the South, is now enjoying his accustomed vigor.

J. P. M. Sibbald, who for the past twelve years has been manager of the Sturgeon Lake Lumber Co., Prince Albert, Sask., returned last month from the West and bought out the coal business of W. J. Merchant of Sutton West, Ont. Mr. Sibbald intends establishing a retail lumber yard at this point and is laying in a general stock. The yard is well located and has excellent shipping facilities. Many friends will wish him every success in his new enterprise.

P. H. Bradley, who for some years represented the Elliott Machinery Co., in Toronto, recently joined the staff of the Preston Woodworking Machinery Co., of Preston, Ont., as eastern representative of the firm with headquarters in Montreal. The Elliott Machinery Co., who are located in Belleville, have closed their Toronto office and their products are being handled from Toronto through the General Machinery Co., 67 Frederick St., Toronto.

A. J. Morris, who was for several years a member of Greig, Morris, Limited, wholesale lumber dealers, Toronto, has withdrawn from the firm and opened an office at Room 1505, Bank of Hamilton Building, Toronto, where he will engage in business on his own behalf and handle both hard and softwoods. The business of Greig, Morris, Limited, is being continued by Alex. Greig, and the firm will specialize in softwoods and B. C. forest products. C. J. Brooks, of Toronto, who is a well-known salesman, has joined the sales staff of the firm and will cover Ontario and part of New York State.

At a meeting held recently in the Board of Trade, Toronto, an organization known as the Box Manufacturers' Association of Ontario and Quebec was formed. G. R. Hunt, of Firstbrook Bros., Limited, Toronto, was elected chairman pro tem. and H. Boulton, Toronto, secretary-treasurer. There was a representative attendance at the gathering and it was decided to hold the first annual meeting of the Association in the Board of Trade Rooms, Toronto, on Friday April 27 at 10 A.M. when a president, vice-president and executive members will be elected for the coming year.

E. H. Finlayson of the Department of Forestry, Ottawa, was in Fredericton recently on business. He consulted with the provincial officials in connection with the arrangements for the Empire Forestry Conference to be held in Ottawa next Summer. While the sessions will take place in the Canadian capital, arrangements are being made for a tour of the various provinces including New Brunswick. Mr. Finlayson will also be engaged in connection with research work in New Brunswick relating to the forest nurseries.

## A Fifty-Fifty Proposition

Salome Sun

Capital is simply accumulated labor in a negotiable form, and labor is nothing but negotiable capital in an accumulated form. In a way, both are the same and you can't hurt one without hurting the other. When a man goes out and labors a day for one dollar or five dollars, he is a laborer. After supper he dolls up and goes out and spends that dollar or five dollars—and then he is either a capitalist or a damn fool, depending on what he spends it for. Equality between labor and capital is and always must be based on the fundamental principle of good wages for good work and good work for good wages. It's a fifty-fifty proposition.

### Will Higher Costs Deter Building?

The lumber trade generally is looking forward to a good year, partly based on the expectation that the demand for constructional purposes will be, at least, equal to that of 1922, with the probability that it will considerably exceed those requirements. Recently, however, the situation has undergone a change which may have a considerable influence on the amount of building carried out. There is a decided tendency for the prices of a large number of commodities essential to construction work to advance. Structural and reinforced steel are two notable examples of materials which have risen in value, and readers are aware of the higher prices commanded by all classes of lumber.

According to Douglas Bremner, president of the Montreal Builders' Exchange, "general increases are looked for in the prices entering into construction work following a period of abnormal price depression. Indications point to the fact that building costs are past rock bottom, and will continue to increase for some years yet." This may be an extreme view, but there can be no doubt that building will cost more than last year, not only on account of the higher prices of materials but also because of the greater outlay for labor. Men in the building trades are putting forth demands for more money and will probably obtain some increases in wages.

Will this higher cost affect building? The consideration of cost is a very important factor in determining whether construction work of all classes shall be undertaken, and experience shows that men with capital will not invest in bricks and mortar when the cost gets to a point which is generally held to be excessive. Work of an urgent character is only then contracted for. It remains to be seen whether the price of materials and labor will reach anywhere near that point this year; if it does, then there is almost certain to be a drop in the demand for lumber.

Mr. Bremner evidently is of the opinion that there will be no developments of this character, as he anticipates a very good building season, particularly in houses. He does, however, make one reservation—"The only thing that can spoil a very good building year here now would be unreasonable demands on the part of labor. We have been conducting a pretty strong educational propaganda as to the advisability of building now, and the people, who have building work to do, have responded well. If the trade unions start in now to make demands that scare off the building public, they will simply spoil their own ends. But so far as I can see, the position is fairly clear that there is not going to be any difficulty, but a general getting together is desirable so that when conditions are

favorable, the building contractors and workers can co-operate to work for a busy year."

The building trade is an important, although not the most important, user of lumber, and if general commercial conditions improve, this would probably offset any diminution in the call for lumber for construction purposes, due to generally higher building costs. At the same time, it must not be overlooked that there is a chance of this outlet for lumber not proving as satisfactory as appeared earlier in the year. The housing requirements of the people are still urgent, but they will only be adequately met, when those who are inclined to invest in this form of enterprise, can build at a price which will allow of a fair return on their money.

### What is The Real Power of a Nation?

The growth of the pulp and paper industry is of considerable interest to many readers, who are as a rule more concerned with the supply of pulpwood than with the finished product. The industry has expended at a great rate, but the end is not yet in sight. The newsprint companies in particular are adding to their productive capacity, while there are plans for new mills. Price Bros. have a heavy programme of extension; the Belgo Company, of Shawinigan Falls, have just added a new machine and ordered another; the Bathurst Company will commence operations in August; the Backus-Brooks Company have contracted for a 100-ton per day machine; the St. Lawrence Paper Mills, Limited, of Three Rivers, and the Fort William Paper Company, are now on the market with their newsprint. Besides these, the Manitoba Pulp and Paper Company propose to erect a 150-ton mill on the Winnipeg River in order to utilize the McArthur limits. Then the Armstrong-Whitworth Company have a very large scheme in Newfoundland, besides which there are one or two indefinite plans in Canada.

It is true that a considerable amount of this new tonnage will not be available for some months, but it looks as if Canada has, or will have in a comparatively short time, reached the saturation point. Such a programme naturally involves further serious inroads on the pulpwood resources of the Dominion which admittedly are not being replaced at anything like the rate at which they are being used.

Then our exports of pulpwood are increasing—a branch of trade which Mr. Frank Barnjum and others would prohibit in the interest of the conservation of the national resources. In this connection an observation by Mr. Floyd W. Parsons is of interest. "The power of a nation," he says, "lies chiefly in its natural resources of essential raw materials, and not in its man-power strength."

If that be so, then so far as pulpwood is concerned, Canada is diminishing and not increasing her power. The rise of the pulp and paper trade has affected the lumber business to a considerable extent. According to G. C. Piche, sixty per cent of the year's cut in the Province of Quebec is of pulpwood, which, of course, means that large numbers of logs, which formerly were converted into sawn lumber, are now being used as pulpwood. The proposed additions to the facilities for making papers will probably increase this percentage.

### The Varying Cost of Producing Lumber

The cost of producing lumber is always a subject of much interest and varies considerably according to different localities. In no two successive seasons do expenditures for cutting, hauling, driving, towing, rafting, sorting, etc., run the same. So much depends upon the availability and efficiency of labor, prevailing rate of wages, the outlay for camp supplies, the amount of snow, rain, heat, etc., transportation and other contingencies, that no definite figure can be given. Of course, in the case of hardwoods the outlay is much heavier than softwoods and again much depends upon the nature of the timber, the average diameter of the logs, the distance from the mill and the facilities of equipment in the way of saws, edgers, trimmers, yard distribution, etc.

A couple of years ago the "Canada Lumberman" furnished some figures on the cost of logs and of milling, the latter term being interpreted to cover the cost of converting logs into lumber in the saw-mill, and these varied almost as widely as do the estimates which are received on various jobs from woodworkers and others when tenders are invited.

A uniform standard cost system, which would, at least, be basic is a desideratum in all forest products operations. At the recent annual meeting of the Woodlands Section of the Canadian Pulp and Paper Association a splendid address on "cost accounting" for logging operations was delivered by L. W. Campbell, chief accountant of the Laurentide Company, Grand Mere, Que. A plan was submitted and endorsed by a committee appointed for that purpose and this

plan has appeared in booklet form. Several large companies have installed systems based on this system and all are well pleased with the result obtained. There is, no doubt, great waste in woods operations and there has been difficulty in the past in obtaining accurate data, but with co-operation, insight and method the difficulty will be solved.

In fixing the price in lumbering operations there must be taken into consideration the percentage of different grades that will be obtained from the timber sawn. In the virgin forest where trees indigenous to certain localities are cut up, the percentage runs very much higher than on second growth timber or where there is an assorted collection. However, a fair average has been struck so far as certain northern woods are concerned, and a late edition of the "American Lumberman" furnished an interesting table which is well worth cutting out and preserving. Here it is:—

Percentage of Different Grades of Lumber That  
Each Species Normally Produces

	Maple	Beech	Hemlock	Elm	Basswood	Ash	Birch
	%	%	%	%	%	%	%
FAS . . . .	18	15	..	25	20	15	20
Selects . . .	6	5	..	10	12	12	10
No. 1 com. .	23	22	..	22	21	20	16
No. 2 com. .	20	23	..	18	22	20	16
No. 3 com. .	33	35	..	25	25	33	35
Merch . . . .	..	..	45	..	..	..	..
Cull . . . . .	..	..	55	..	..	..	..

### United Action to Check Forest Fires

The province of Quebec government is determined to take every possible means to protect the provincial forests this spring and summer against their destruction by fire. Hon Honore Mercier, Minister of the Department of Lands and Forests, and G. C. Piche, superintendent of the Forestry Service, have given a great deal of their time and attention for several months to the question of conservation of the wooded resources of the province. One of the principal conclusions they arrive at, was that the woodlands must under every and all circumstances be guarded against the possible devastation by flame. In this regard they concluded that, in order to secure perfect protection, the bush will be closed to all trespassers from April, and no man or party of men, unless authorized and the possessor of a departmental pass, will be permitted to enter the woods. Those, who are accorded a pass, will be furnished with instructions to guard against the possibility of fire, and will be held responsible for their actions while in the woods.

The Taschereau Government, alarmed at the enormous loss in the timber limits during past years through the cause of fire, generally traceable to the careless hunter, fisherman, new settlers and others, have given the question of protection of the provincial forests their most careful consideration. The department, responsible for this work, is that of Lands and Forests, presided over by Hon. Mr. Mercier. He is determined that no effort will be neglected to put into practical effect the wishes of Premier Taschereau. To conform with the plans adopted by the government, it was decided to enter into negotiations with the provincial governments of New Brunswick, Ontario and the State of Maine for joint co-operation for the protection of the sylvan resources of these respective provinces and state.

G. C. Piche, superintendent of the Quebec Forestry Service, has already had satisfactory interviews with the representatives of the province of Ontario and the State of Maine, and before the publication of this article, will have interviewed the representatives of New Brunswick and New Hampshire. All the independent forest fire protective organizations in the Canadian provinces as well as Maine and New Hampshire will also be consulted. It has been decided to double, and, if possible, triple the forest rangers this spring and summer to guard against the possibility of bush fires.

The government also decided to organize a forest ranger school, the first of the kind to be organized in Canada, and have appointed H. Ray, a well-known forestry engineer as director. This school will open on April 15 to allow forest rangers, wishing to qualify, to start their studies which will include forest conservation and protection, etc.

### A Movement That all Should Push

In a short time the forest fire season will be upon us again with all its horrors, its destruction of real and potential wealth, its cost of property and also, perhaps its toll of human lives, writes Fred Brown of Fort Frances, Ont. All authorities on forestry and most people engaged in the conversion of raw forest products into the finished product such as lumber, lath, shingles, pulp and paper, posts, poles

and ties are agreed that Canada's supply of available timber is getting dangerously low. During the year 1922 about four thousand fires claimed 1,300,000 acres of forest. Such claims of the fire demon should not only be food for profound thought but it should arouse in every Canadian citizen a desire to prevent a recurrence.

The daily press as well as lumber journals, pulp and paper magazines and forestry publications and others have given their space and time unstinted to the teaching of the gospel of conservation. The people of Canada, who own and are trustees of about eighty per cent of Canada's remaining and rapidly decreasing forest wealth, can obtain still better results in their fight against the careless use of fires, matches and tobacco in the woods if they enlist the powerful help of the pulpit all over the Dominion, the church being recognized as a most powerful and important element in moral education. The schools and school teachers must be approached to lend a helping hand in educating the coming generations as to the stupidity and criminality of forest fires caused by human carelessness in virgin forests, and especially in second growth, from which our future supply must eventually come.

Stop forest fires of all descriptions and Canada will become one of the most favored and prosperous nations on earth; keep on burning and in less than a century Canada may share the fate of China. Which is it to be?

### If I Were a Retail Lumberman

By J. D. S.

I hope to be one some day. I would take advantage of everything possible in the way of publicity and display. I would see that I had a large sign on my fence, a neat attractive office, a dry, well laid out yard, uniform piles and a well-arranged stock. I would make my premises as inviting as possible and impart to everything an air of orderliness, thrift and prosperity.

I would avail myself of the advantages of a display or service room in which samples of everything that I carried in stock or sold would be shown to the best advantage. I would allow prospective homebuilders to come in and browse around. I would place a courteous attendant in charge of this room, if I had not time to look after such details personally. I would also secure a reliable mailing list from the city directory, the assessment roll, telephone book, contractors, builders and others, and would mail regularly, illustrated literature showing certain plans of houses, garages, verandahs, sunrooms, built-in features, pergolas, hardwood flooring, roofing materials, front doors, interior trim, etc.

I would write to manufacturers who issued literature, asking them to send me several hundred copies of their advertising matter and to have my name and address printed plainly on each leaflet, booklet, folder, etc. These I would also despatch to a carefully selected list and follow up every live prospect. I would have a booth at the fall fairs and the various exhibitions, such as own-your-home expositions, etc., which are often held in different towns and cities to show the lines of goods manufactured in their midst.

I would furnish the newspapers with timely information on the building situation, the trend of lumber values, the outlook in production and distribution and also items in reference to who were putting up new warehouses, stores, barns, garages, dwellings, etc., I would co-operate with the press to the fullest possible extent.

I would avail myself of every legitimate means of publicity that I could. I would seek to cultivate the community spirit, to spread abroad the gospel of contentment, happiness and peace by infusing into all my publicity plans the spirit of homebuilding. I would point out that the man who owns his home has a substantial interest in the city or town in which he resides. He generally evinces civic pride, plants a garden, beautifies the lawn, sets out trees and does much in every other way to impart an air of prosperity and go-aheaditiveness to the community.

I would read carefully the trade papers and note what others are doing. I would follow up any practical suggestions or timely pointers and seek to incorporate in my own business everything that was likely to extend the sphere of my operations, enlarge my list of customers and gain the attention of new residents. I would seek to strengthen the bonds between myself and those with whom I did business so that, when undertaking anything in the building line, they would come to me from force of habit, a sense of satisfactory service and a conviction that I would deal with them fairly, honorably and on a mutually satisfactory basis.

### Aggressive New Lumber Company Formed

The Thurn-Maxson Lumber Company with offices at 213 Citizens' National Bank Bldg., South Bend, Ind., has been formed. The members of the organization are George O. Thurn and Ray B. Maxson. A general wholesale hardwood lumber business will be conducted dealing in Northern and Southern hardwoods and a specialty made of Canadian birch.

These gentlemen have long been identified with the hardwood lumber business in various capacities. Mr. Thurn for many years was lumber purchasing agent for the Studebaker Corporation and for the last five years was secretary and sales manager of the Cyrus C. Shafer Lumber Company. Mr. Maxson succeeded Mr. Thurn with the Studebaker Corporation and in 1921 embarked in the wholesale

R. B. Maxson, South Bend, Ind.

G. O. Thurn, South Bend, Ind.

and commission business. In 1922 he, with Mr. Charles O. Maus, formed the Charles O. Maus Lumber Company, which they conducted for a year, and at the end of that time Mr. Maxson purchased from Mr. Maus his interest in the company. Subsequently Mr. Thurn purchased the interest formerly held by Mr. Maus and the company now is operating under the style of Charles O. Maus Lumber Company, George O. Thurn and Ray B. Maxson, owners. The company enjoy a good reputation among the consuming trade.

To bring additional personality into the company Messrs. Thurn and Maxson have formed and are operating a hardwood lumber business under the style of The Thurn-Maxson Lumber Company, which will eventually take over all of the assets and liabilities of the Charles O. Maus Lumber Company.

The Thurn-Maxson Lumber Company is the sole representative in the Central Western States for Canadian birch, elm and basswood handled by Edward Clark & Sons, Ltd., of Toronto, who have developed a splendid reputation for, integrity and dependable grades. Clark & Sons will have a production of birch alone this season of twenty million feet, a great part of which will be marketed in the United States through this arrangement.

### Excellent Demand for Hardwood Stocks

The Shortreed Lumber Co., of Kearney, Ont., have disposed of their 1922 stock of about one and a half million feet. One million feet of hardwood was purchased by M. Martin, of Huntsville, and half a million feet of softwood by Arthur N. Dudley, of Toronto. The firm have about one and a half million feet of mixed stock to cut this year and expect to start sawing about May 1st.

At Coulson, Shortreed Bros. have disposed of one and three quarter million of hardwood to the Pedwell Hardwood Lumber Co., Toronto, and expect to have out about three quarter million for this year's cut. Sawing will begin early in May. The firm are busy shipping from both yards at the present time.

### Lumbermen Should Take Time to Consider

"Go slow. In this age of rush and 'do it now'" said a Montreal lumber manufacturer, "the advice might seem out of date. Nevertheless my experience has proved it to be sound. We are sometimes called on to give quick decisions, but we are too much inclined to take snap judgments, to decide without giving due consideration to what may be the results of our judgments. In the ordinary course of business there is no need for such haste; we can afford time to

think over matters. By doing so, we are able to look at things from many angles and to weigh possibilities in a manner impossible under the 'do it now' method.

"The lumber business has of necessity the speculative aspects. We are never sure which way the market will go, and, for this reason, it is essential to consider carefully any action, especially in relation to a buying or selling policy. This looks like stating the obvious, but I have been impressed with its importance in view of the instances which have come under my notice where apparently very scant deliberation has been given to the matters in question. Even the most experienced will make mistakes, but there is no reason why one should add to the chances by taking hasty judgments."

### Budget of News From Busy East

One of the biggest lumber deals consummated in these parts for some time came to light on March 6 when it was announced that the Eastern Pulp Wood Company had purchased from the James Murchie Lands Company, lands on the St. Croix River, which during recent years have been cut by the Eastern Pulp Wood Company and the St. Croix Paper Company for stumpage. The total acreage of land involved is upwards of 57,000 acres, a large proportion of which is situated in Washington County. It is reported that the Eastern Pulp wood Company has also made arrangements to purchase from the Murchie Lands Company land in Calais.

A recent report from Chatham, N. B., is most encouraging. The lumbermen are said to be preparing for a busy season and the Miramichi Lumber Company's big rossing mill is expected to run day and night. It has been announced that their large mill at Morrison Cove will manufacture laths and shingles. The J. B. Snowball Company's mill is also being put in condition for an anticipated heavy season's cut. As soon as weather conditions will permit sawing operations will be started. This is said to be greatly appreciated by residents, who have long been waiting for the mills to resume operations and afford them employment.

Tuttle Taylor's sawmill at Brooklyn Siding, near Port Elgin, N. B., was recently destroyed by fire. A few days previous to the fire the mill had finished sawing for J. & C. Kickman Ltd. In addition to the loss of the mill a number of loaded lumber cars were a prey to the flames. The loss was estimated at \$4,000 and unfortunately no insurance was carried.

The Elwood Burt Lumber Company's mill at Burt's Corner, N. B., recently started sawing. It is the first to begin in those parts, although a number of mills has been engaged practically all winter sawing laths. Mr. Burt expects this season's output to reach 6,000,000 feet. For some weeks the mill will be employed sawing hardwood, and after this lot is finished operations will be confined to spruce.

The aims and objects of the Canadian Forestry Association, were the subjects of an interesting and instructive address delivered before the members of the University of New Brunswick a few days ago by Gerald Blythe, of Ottawa, assistant secretary of the Association. The speaker emphasized the value of publicity in forest conservation. After leaving Fredericton Mr. Blythe went to the Miramichi district where he had a number of matters to look after. He had previously been in Nova Scotia where he had been conferring with officials of the provincial government.

A meeting of the St. John River Log Driving Company was scheduled to have been held in St. John on March 4, but owing to the absence in England of F. C. Beatteay, managing director of Stetson, Cutler & Company's, Ltd., large mills, and also the absence from these parts of other leading members, it was postponed until a call from the chair.

Lumber shippers in the province of New Brunswick were elated over an announcement made public recently to the effect that there will be no building trades strike in the Boston district this spring, a settlement of differences having been reached. For the last two months the lumber industry here as well as in New England has been somewhat hampered by uncertainty as to the building trades wage situation and the result of which meant much to shippers. With this definitely settled and the embargoes removed the outlook is considered very promising to those shipping to New England markets.

# What The Lumber Trade is Doing in Canada

L. J. Menard, St. Michel Des Saints, Que., is contemplating installing a complete electric system in his sawmill.

E. J. Staniforth, of the Fassett Lumber Co., Fassett, Que., was a recent caller upon the trade in Toronto, and reports that the outlook for the coming year in the hardwood line is promising.

Rogers Supply Co., Limited, builders' supplies, who have been located at 28 King St., W. have removed to the General Accident Bldg., Bay & Temperance Sts., Toronto.

The Norwegian steamer "Pacific," left New Westminster, recently for California, carrying 1,500,000 feet of lumber for the Canadian Western Lumber Co. and 1,000,000 feet for Robert Dollar & Co.

J. P. Dupuis, of J. P. Dupuis, Limited, president of the Montreal Retail Lumbermen's Association, and J. P. Abel, of Abel, Fortin, Limited, have been elected directors of the Montreal Builders' Exchange.

P. G. Mahoney, Limited, Calhoun, Dorchester County, New Brunswick, was recently incorporated taking over the business of Patrick George Mahoney and will manufacture and deal in wood products. Capital \$199,000.

A recent despatch from British Columbia says that seven big freighters loaded cargoes at the Fraser Mills the first three months of the year, each carrying 1,000,000 to 3,000,000 feet. A considerable portion of the output has been shipped to Australia.

Stewart Rutherford, of the Redfern Lumber Company, Limited, vice-president of the Montreal Retail Lumbermen's Association, has just returned to business after about three weeks absence due to a poisoned thumb.

The Abitibi Power & Paper Co. of Iroquois Falls, Ont., has closed its winter camp. About 1,500 men were engaged in the bush during the season and most of these, who are young farmers from Eastern Ontario and the Ottawa Valley have returned to their land.

The Chinese who recently struck at the Rainbow Mill, Port Coquitlam, B.C., because a white sawyer was thrust into their exclusive circle by the management without their permission, have been replaced by a fresh bunch of Chinamen and work has been resumed.

J. A. Rowland, of the Sprague-Rowland Lumber Co., Winnipeg, is spending some time in Ontario, and it is his intention to open an office in Toronto next month. The location of the Ontario branch of the firm will be in the new Federal Building, corner of Sheppard and Richmond Sts.

It is now understood that the plan of reorganization of the Riordon companies is nearing completion and stockholders and bondholders are likely to be notified of plans for financing that will provide the corporation with new working capital. The various Riordon bond issues have shown some appreciation of late.

T. C. Warwick & Son, of Blenheim, Ont., have purchased the lumber business of F. W. Kennedy and taken possession. The firm is one of the most aggressive retail lumber concerns in southwestern Ontario. Mr. Warwick is an active member of the Association for that part of the province.

C. M. Wells, formerly of the firm of Taylor & Wells, is now in the retail lumber business in Paris, Ont., having started out on his own behalf some time ago. Mr. Wells, who was not in good health for a long time, has now regained his accustomed vigor and says the outlook for business during the coming season is promising.

W. E. Gunter, who for eight years past has been secretary and a director of Murray & Gregory, Limited, St. John, N.B., has retired from that position and gone with Shepard & Morse Lumber Co., of Gaspé, Que., where he will have complete charge of their Quebec business. Many friends will wish Mr. Gunter every success in his new sphere of operation.

The sum of \$100,000 is being expended on the Canadian Pacific Lumber Company's mill at Port Moody, B. C., which is expected to be in operation within the next few weeks. The mill has been shut down for several years and the news of its resumption of operations comes as a welcome sign of the times to the citizens of Port Moody. The Thurston-Flavelle mill is also being reconstructed and the McNair shingle plant is being worked to capacity with plenty of orders in sight.

Word received from Quebec is to the effect that a delay of nearly one month in the spring supply of food for the huge lumber camps on the north shore has resulted in considerable hardship among the unusually large number of men in the camps. Relief came in time to a number of the camps to avert a rather serious siege of hunger.

Among the lumbermen who have been spending some time in Florida, enjoying the sunny breezes of the South and have returned home are James R. Summers and wife, Toronto; W. F. Beck and wife, Penetanguishene; James Gardiner and wife, Galt; Hon. George Gordon and wife, North Bay; A. E. Gordon and wife, Toronto, and others.

D. F. MacDonald, a former well-known pioneer of Ontario, died recently at the home of his son, A. F. MacDonald, in Brandon, Man. He was 82 years of age and was one of the earliest settlers in Parry Sound where he resided until three years ago when he went West. The late Mr. MacDonald was a widely known lumberman who was engaged in the industry for many years in the Parry Sound district. He is survived by his wife, five sons and three daughters.

In the Nova Scotia House of Assembly recently two members of the Opposition pressed strongly for the revoking of the Order-in-Council by which the Oxford Paper Co., of Rumford Falls, Maine, are allowed to export pulpwood without first manufacturing it from their 600,000 acre lease of the Crown Lands in Northern Inverness, and Victoria Counties, C.B. The lease was originally made in 1899 for a term of thirty years with the stipulation that the pulp be manufactured in Nova Scotia. The lease was changed in 1901 to one for 99 years. An Order-in-Council was passed to allow the exportation of wood without manufacture.

The Nova Scotia Trust Company have been appointed as receivers for the affairs of Clarke Brothers, Limited, pulp, paper and fibre board manufacturers, of Bear River, Nova Scotia. Receivership has been asked on behalf of two applicants, the first a Canadian, the second, Perkins, Goodwin & Co., the large paper board house of New York city. This temporarily stops the negotiations whereby it was hoped Perkins, Goodwin & Co. would take over the operations of Clarke Bros. Those in touch with the situation, however, feel hopeful that the forcing of action may work out satisfactorily for the bondholders.

New Big East River Improvement Co., Limited, Huntsville, Ont., was recently granted a provincial charter to take over the improvements at present existing on the Big East River in the district of Muskoka including Tasso Lake, Moose Lake, Haines or High and Harry's Lake Dams, the Bear Creek Dam, a four tenths interest in Sinclair Bridge and the improvements on the Black Creek, Buck River and Axe Creek and tributaries. The company will construct dams, slides, piers, booms or other necessary work on the above rivers and lakes. Capital \$20,000.

Trout Mills, Ont., is likely to become this summer the centre of considerable aerial activity, according to certain phases of plans reported to be in the process of development for the closer protection of forests in the neighborhood of North Bay from the hazard of the annual fires. A recent visitor to the district was Captain McKeown, of the Royal Canadian Air Force, Ottawa, who is arranging for the establishment of a force of four hydroplanes at Trout Mills for scouting purposes in connection with the forest fire prevention campaign. It is also believed that there will be a number of officers and rangers located in this district with headquarters at North Bay.

At the annual meeting of the Abitibi Power & Paper Co., which was held recently in Montreal, the president, F. H. Anson, stated that the programme of construction which his company had been carrying out for some years past, was now completed and that everything was in excellent shape to care for the active demand for newsprint which now exists. The railway which the company built into the timber limits has been delivering pulpwood for some time and has proven most satisfactory, the work being done at a considerable saving over the former methods of delivering by water. The output of the plant is at present in a satisfactory state and the earnings are running considerably in excess of those of a year ago. The old board of directors was re-elected for the coming year.

The shingle mill operators on the Fraser River have experienced a lull during the past few days following several weeks of real activity. Severe storms in the eastern and middle States are considered to be more or less responsible for this state of affairs, but with the advent of spring, it is expected that inquiries will be more numerous. Trouble with Oriental crews has been the general rule throughout the mills, the Chinese demanding an additional 2 cents for cutting and also for packing. Some of the mills are reported to have met the demand, which is an indication that the others will most probably have to fall in line once the requisitions for the product increase.

### Improving Log Driving on Northern Limit

The "Canada Lumberman" is indebted to E.C. Burton, of the Gervais Improvement Camp on Austin & Nicholson's limits at Nicholson's Siding, Ont., for the pictures of the dams which are presented. The dam is on the limits of the firm, and one view taken from the

New dams erected on limits of Austin & Nicholson, Chapleau, Ont.

down stream side shows the general construction and the upper taken from the upstream side gives a good idea of the sheeting before it was covered over with gravel.

The dam is one of many under course of construction. At one point the river is turned from its natural course by a "block" dam and made to flow over land which was once a main road, thereby saving many miles in the log drive. In addition to the reduction of distance large quantities of water are held in reserve by dams on the upper lakes to ensure a good steady flow at all times. Owing to the steepness of the banks the stream is an excellent one for driving and no damage can be done to the trees on the banks.

### Construction Industries Lead In Trade Revival

The construction industries unquestionably constitute a reliable barometer of business conditions. Building, touching as it does so many phases of the nation's activity at so many different points, is the most representative group in commercial life. The actual volume of new construction undertaken, together with the trend of building costs, therefore afford the key to the economic complexities of the coming year.

What, then, is the present position and the outlook for building in Canada? The course of construction operations points to a period of expansion. For the first quarter of 1923 the value of construction contracts awarded throughout Canada, according to statistics compiled by MacLean Building Reports, Limited, was \$43,107,400, compared with \$32,575,900 in 1922. It is when the figures are compared month by month, however, that recent developments are seen to advantage. Building operations in January totalled \$9,840,800, in February, \$13,311,800; and in March, \$19,954,800. The tendency is toward increased activity in business and industrial building, the total for these two groups during the first quarter of 1923 amounting to \$25,545,000, compared with \$10,748,900 in 1922. Residential activity is slightly less than last year, with the building of better class homes in evidence.

Building in Quebec has increased markedly, the value of work started during the first quarter of 1923 amounting to \$13,344,300, compared with \$6,741,400 last year. Ontario continues to lead all the provinces, the value of new work started this year so far amounting to \$22,422,500 compared with \$20,679,900 during the same period last year. Building in the Western Provinces totals \$6,848,500 compared with \$4,486,000 last year.

With building costs practically stabilized, a plentiful supply of mortgage money, efficient labor, and with the immense accumulated arrears of building postponed during the war and subsequent inflation phase to catch up with, the prospects are bright for the most expansive period in building that Canada has yet witnessed.

### New Pulp Mill for Prairie Province

Details of the J. D. McArthur pulp and paper plant in Manitoba were recently announced when extension of a railway charter, the Fort Alexander Railway, was sought by the legislature. The plant construction is to start in May. An expenditure of \$4,000,000 is proposed. Bonds and stock will be sold to provide this. By May 1, 1924, it is expected, the mill will be in operation. It will open as a two-unit mill, capable of putting on the market 130 tons of finished newsprint per day. Within the next five years, if present plans of the company mature, the mill will be extended to a six-unit structure. The site is near the Fort Alexander Indian Reserve, south of the Winnipeg River. Pulp wood rights on a large tract, estimated to contain 4,000,000 cords, has been secured from the Dominion Government. The railway line will cost \$20,000 a mile to construct.

### Greater Activity in Hardwood Production

The Birch Lumber Co., of Grenville, Que., at the head of which is H. E. Gill, state that there has been a considerable increase in the cut in that district during the past season in comparison with a year ago, which will amount to possibly 35 per cent. Quotations which are prevailing for the better grades, have had a tendency to make the manufacturer produce better logs and lumber. Prices have improved considerably during the last three months and all dry stock is sold and about 90 per cent of the 1923 cut has already been disposed of. Orders are abundant but embargoes and the supply of cars have retarded shipments a great deal with the result that most manufacturers and wholesalers are unable to take care of their shipments as promptly as they would like owing to the railroads not being in a position to handle the business. The Birch Lumber Co., however, say that recently the car supply has been improving and practically all the good grades and considerable of the lower ones are being shipped to the United States market. Some mills have been sawing this winter and practically all will be sawing by the end of April.

### Good Prospects for Summer Cottages

W. H. Johnston, lumber manufacturer, of Pefferlaw, Ont., says that the prospects for building summer homes around Lake Simcoe were never better than they are at the present time. He is looking forward to a good cottage trade but adds that the farmers in that section of Ontario are not in a position to put up new buildings. They are buying only what is absolutely necessary in the way of forest products. Mr. Johnson says that he does not blame them because the produce from the land has dropped in value to a greater extent than that of any other business.

### Japan's Lumber Trade Coming to Canada

Action of the Soviet government in declaring void the Siberian lumber concessions formerly held by Japanese interests is expected to result this year in the placing of a larger proportion of Japan's lumber business with Canada and the United States, says a recent despatch from Yokohama.

Japanese buyers are now being forced to pay higher prices for lumber in British Columbia, Washington and Oregon and that can be attributed to the fact that the supply of continental lumber in the Far East is temporarily restricted.

Present indications are that lumber importations from Saghalien and Hokkaido, as well as from the Siberian maritime province, will be less this year than usual. Shippers are hesitating to enter into forward shipment contracts, as there is a surplus of cargo to be exported and the lumber freight now contracted is pretty cheap.

### Will Straighten Out Timber Royalties

Efforts are now being made to straighten out British Columbia's timber royalty problem, which is believed to be one of the most formidable obstacles in the way of timber developments in the province. Under the present royalty system timber holders are obliged to pay a rate to the government which is so high that further tenure would result in bankruptcy eventually, and for that reason the timbermen have held several conferences with representatives of the government with a view to modifying the charges.

The present system is so severe that negotiations for extensive pulp and paper and lumber developments have recently been abandoned, and while they are likely to be renewed at a later date nothing will probably be done until the charges have been revised on a basis that gives better guarantee of future operations on a profitable basis.

The B. C. government has refused any proposal contemplating fixed royalties over a term of years longer than five years. The timbermen have asked for a fixed royalty for twenty years, but that has been turned down. All interests, however appear to be in favor of basing royalty in future on stumpage instead of on the wholesale selling price of manufactured lumber, as at present. This will make it necessary to work out some plan for the valuation of British Columbia timber in a far more thorough way than has been done in the past, and when that has been done the government and the timber owners will decide a workable plan of assessment and decide for how many years the charges are to be allowed to remain fixed.

A charter has been granted to the Taylor Lumber Co., Limited, with head office at Winnipeg and a capital stock of \$20,000, to carry on in all its branches a general lumber and timber business. Among the provisional incorporators are K. L. Patton, Ernest B. Eadie, E. P. Stephens and others.

## Canadian Lumbermen's Executive Decide to Hold Next Annual Convention in Buffalo on January 30 and 31—Sales Tax Discussed

At a meeting of the directors of the Canadian Lumbermen's Association, which was held in Montreal on April 4th, there was a representative attendance and considerable business was transacted. It was decided to hold the sixteenth annual convention of the Canadian Lumbermen's Association at the new Statler Hotel in Buffalo on Wednesday and Thursday, January 30th and 31st, 1924. It will be remembered that, at the last meeting in Montreal, a pressing invitation was extended from the various lumber bodies of Buffalo to the C.L.A. to hold its next assembly in that city. The invitation was accepted. This will be the first time that the C.L.A. has held its annual convention outside of Canada, but as a large number of U.S. firms are members of the organization, which has become international in its scope and character, it was decided that it would be fitting to meet in an American city in 1924.

Some discussion came up in reference to certain phases of the sales tax and a committee of A. E. Clark and W. E. Bigwood, of Toronto, was appointed to confer with the Wholesale Lumber Dealers' Association, Inc., in Toronto, with regard to the matter, J. B. White, of Montreal, with power to select his own committee, was appointed to appear before the Montreal Wholesale Lumber Dealers' Association in that city.

The question of uniform grading rules was brought up and left over for further consideration.

The members of the Legislative and Transportation Committees have been appointed for the coming year, D. McLachlin, of Arnprior, being chairman of the Legislative Committee, and A. E. Clark, of Toronto, of the Transportation.

Several other matters left over from the annual meeting, which concerned the routine work of the Association, were taken up and brought up to date.

Among those attending the Executive meeting were,—Angus McLean, Bathurst, N.B., president of the C.L.A.; George W. Grier, Montreal, first vice-president; David Champoux, Restigouche, Que., second vice-president; W. M. Ross, Ottawa; J. S. Bock, Montreal; G. C. Edwards, Ottawa; W. E. Bigwood, Toronto; W. G. Power, Quebec; R. E. Stocking, New York; D. McLachlin, Arnprior; J. B. White, Montreal; A. E. Clark, Toronto; R. L. Sargent, Transportation Manager, Ottawa, and Frank Hawkins, Secretary, Ottawa.

### Montreal Wholesalers Entertain C.L.A. Directors

The directors of the Canadian Lumbermen's Association, who held a meeting in Montreal on April 4th, were the guests of the Montreal Wholesale Lumber Dealer's Association at their weekly luncheon on that date. At an informal meeting after the luncheon with J. S. Bock presiding, some questions relating to transportation were briefly discussed. A. D. Huff, traffic manager of the Riordon Company, and R. L. Sargent, transportation manager of the Canadian Lumbermen's Association, answered some queries relating chiefly to local rates. Mr. Huff pointed out that the present time was opportune in regard to raising questions as to switching charges, having regard to the consolidation of the Canadian National lines. Mr. Sargent stated that the companies composing the Canadian National Railways were avoiding, in many instances, giving the benefits regarding switching charges and through rates, which should accrue from the amalgamation. Users of the lines should make it their business to secure those benefits. The different companies now formed one line and traffic should be handled in that sense.

J. S. Bock, in asking the members to consider the claims of the Canadian Lumbermen's Association, pointed out the good work which was being done by Mr. Sargent on transportation matters. In associations of this character the members did not fully realize the benefits until those benefits no longer existed. The lumber industry would, undoubtedly, suffer if the association ceased to function. He remembered the time when it was a job to get an interview with the lumber agent of the C.P.R.; to-day it was quite different, and, strange to say, the railway representatives were anxious to settle any questions rather than have them adjusted through the transportation department of the Canadian Lumbermen's Association. That association dealt with many other matters of interest to lumbermen on the same basis. He welcomed the presence of the directors of the Association, and suggested that the wholesalers of Montreal would receive material benefit from becoming members, after, of course, joining the Montreal Wholesale Lumber Dealers' Association.

The Montreal Wholesale Lumber Dealers' Association was represented by O. Page on the deputation of commercial and other

associations which waited on the city council and presented petitions in favor of daylight saving.

Messrs. S. P. Thomson, of the Gatineau Company, Limited, Ottawa, and M. B. Hamilton, of M. B. Harroun & Sons, Watertown, N.Y., were guests at the luncheon of the Montreal Wholesale Lumber Dealers Association on April 4th.

### Vast Timber Wealth in The Valley

Despite the rapid increase of settlement entailing extensive land clearing operations, an enormous amount of standing mercantile timber is still in reserve in the districts adjacent to the north side of the Fraser Valley. According to statistics furnished by E. Walmsley, crown timber agent, New Westminster, B.C., the available supply of these vast reserves is estimated at 4,200,000,000 feet, and at the rate of cut of last year, which was 901,000,000 feet, will last for a long period provided proper conservation is in force. In getting out estimates of the timber cut and in reserve crown timber officials have divided the north side into five districts, all practically within a radius of 80 miles from Vancouver. In Coquitlam, timber, including fir, cedar and hemlock, to the extent of 25,000,000 feet was cut last year—the chief logging operations being carried on by the Canadian Robert Dollar Company, Pitt River Shingle Company, Pacific Shingle Company and Robert McNair Shingle Company—the reserve in this district being estimated at 500,000,000 feet.

### Big U.S. Mill May Move To Canada

When legislators at Washington, D.C., were framing the Fordney Tariff, which imposes charges of \$3.00 per thousand feet on all saw logs towed into U.S. waters from Canada, representations were made to the Government that mill operators in the State of Washington would be forced to move their mills across the line into British Columbia territory, if the measure became law.

At that time this was considered to be an idle threat, but now comes the announcement of the intention of the Morrison Mill Company, one of the biggest operating lumber concerns in the State of Washington, to remove its big plant at Blaine to Vancouver. This is viewed in Vancouver lumber circles as the first definite move on the part of Washington lumbermen to carry into effect the prediction made when the Fordney Act was being discussed.

The Morrison Mill Company operate three large mills in Washington, and it is their intention to move one of these mills as soon as a suitable site can be obtained. This mill has a daily capacity of 90,000 feet of lumber and 20,000 box shooks.

### Hope Lumber Company Branching Out

The Hope Lumber Co., of Little Current, Ont., are making extensive additions to their plant and are installing an 8-foot double cutting band mill; log carriages; steam feed; kicker; flippers; 48-inch edgers; log deck rolls; band saw sharpener; two 72 in. x 16 ft. boilers; 18 x 24 ft. sawmill engine; shafting, pulleys; lath mill and bolter, and an eight saw automatic trimmer. The entire equipment is being supplied by the Watrous Engine Works Co., Limited, of Brantford.

### Co-operative Effort to Reduce Fires

As a result of a conference which took place recently between G. C. Piche, chief forestry engineer of Quebec, and Neal S. Violet, assistant chief forestry commissioner, of Maine, and a number of representatives of limit holders on the border state, arrangements were completed to fight forest fires in that section during the coming season. Mr. Piche said that there existed no doubt but that much benefit would result from this co-operation between Quebec and Maine as forest fires had caused havoc in that section. Hon. Mr. Mercier, Minister of Lands and Forests, is anxious to have an agreement reached and effective co-operation arranged. A conference with the New Brunswick representatives will also be held.

### Forestry Service Erects Phone Lines

It is the intention of the Ontario Forestry Department to erect a telephone line from Parry Sound on down the shore to Go-home bay, and also to have different lines connecting the several observation stations at Dorset, Moon River and Key Junction. More will be erected at the Still river at the C.N.R. crossing at Loring, Powassan and in Proudfoot township. All of these stations will eventually be connected up by wire. It is likely that the seaplane base for all of the north will be located at or near North Bay next summer, as this point will be central for the territory to be covered.

## Mr. Booth Hurrying on to Century Mark

J. R. Booth, Ottawa, Ont.  
Canada's Lumber King

J. R. Booth, of Ottawa, the veteran lumber manufacturer, pulp and paper producer, timber limit owner and railway builder, celebrated his 96th birthday on April 5th. The "Lumber King" is enjoying good health and spent the anniversary of his nativity in his usual manner by visiting the various departments of his mammoth industries at the Chaudiere. Following a custom established several years ago his employees presented him with a basket of ninety-six choice roses. Mr. Booth became a resident of Ottawa ten years before Confederation, has lived in the Capital city sixty-six years and is still going strong. He is Honorary President of the Canadian Lumbermen's Association and is one of the most widely known operators in the world.

The story of his career is one that reveals pluck, determination and purpose. Mr. Booth has always led a rugged, outdoor life, has ever been to the forefront in huge undertakings and never asked a man to do a job which he himself was not capable of performing.

It was said of Napoleon Bonaparte, the "little Corsican corporal" during his vast campaigns of conquest, that he never called upon those under him to go where he would not venture himself, and the same remark may be made of the great Canadian captain of industry.

Mr. Booth has always believed in the gospel of hard work, and for recreation sallies forth and does a little more work. He landed in Ottawa in 1857 with \$9 in his pocket. To-day he is the largest holder of timber limits in the civilized world and the oldest active lumberman on the American continent.

## Will Stop the Butchery of Trees

The Ontario Department of Highways has made a wise move in determining to stop tree butchery along public roads. Not only is it the intention to beautify the highways, but to preserve the existing beauty in that trees will not be mutilated or sacrificed wherever it is possible to save them. No company, telephone, power or telegraph will be allowed to cut the trees without permission and only to remove branches which are entirely essential to transmission, will be given, and in any case only the minimum amount of tree pruning will be allowed, and such must be done under the supervision of the Department of Public Highways. In this connection various companies have entered heartily into co-operation with the department in that at present they are trying to clear their lines with as little mutilation of trees as possible.

## British Empire Co. Has Big Project

In the annual report of the Montreal Harbor Commissioners, just issued, reference is made to the development of the B. C. timber trade via the Panama Canal. It is stated that several shiploads of lumber arrived in bottoms from the Pacific Coast, the property of the British Empire Lumber Corporation, Limited, which was disposed of almost on its arrival. The lumber industry will in the future be a noteworthy feature of the port, as the same firm has rented a large space from the commissioners on Bickerdike Pier where a large timber shed and sawmill are being erected. The company expects to saw and handle 50,000,000 feet of lumber annually through the harbor of Montreal.

The first unit of the sawmill consists of a mill and storage shed of fireproof construction with the necessary siding and water supply. The width of the sawmill is 111 feet over all, divided into three bays of nearly eleven spans, the whole central portion of the roof being raised over the two columns so as to form a monitor for lighting and ventilating the mill. In each bay, provision has been made on the columns for the future installation of three-ton crane runways. On each side of the building an interior depressed trackway will make possible the loading into cars under cover.

The sides and end walls are to be completely glazed, except where, at the ground, steel curtain doors will be located in each longitudinal bay. The mill will have a length over all of 210 ft. 10 inches with columns 25 ft. on centres.

The length of the storage shed and the longitudinal spacing of

columns will be the same as in the sawmill, its width being 81 feet with columns spaced 22 feet 7 inches, 37 feet 4 inches and 22 feet 7 inches on centres. An 18 feet 6 inches wide depression in the centre of the building is provided for facilitating the shipping and receiving of material by rail or by vehicles. The voids between the concrete structural members in the sides and end walls will be closed with a solid 8 inch curtain brick wall. Light and ventilation in the shed will only be through the double monitor built integrally with the roof slab. The floor of both buildings, of concrete, will be raised 3 feet 9 inches above the level of the pier. The roofing is to be of tar and gravel reinforced with roofing felt, the whole flashed and counter-flashed with galvanized iron. All sashes will be of the solid metal type, glazed with ¼ inch wire glass. All doors to be metal. A dry pipe automatic sprinkler fire system is to be installed.

## Log Driving Prospects in Quebec Province

The heavy fall of snow in the province of Quebec, especially on the south shore and low lands of the rives St. Lawrence east of Quebec City, as well as the unpredicted cold weather lasting until the beginning of April, caused apprehension among the timber firms and limit holders regarding the river driving of their logs this spring to their mills and base of storage. The snowfall during February and March in many parts of the forest, where lumber operations have been carried on during the past winter, attained a depth from six to eight feet, and the ice in the rivers, on account of the intense cold weather, became very thick in places, reaching down almost to the bed of the river and not likely to break up and move out until the end of April.

If this should happen and, in the meantime, warm weather and a season of rain set in, the vast quantities of the beautiful will naturally thaw and turn into water from the inclines toward the rivers and, instead of swelling the waters to aid in the successful drive of the logs, will rush over the ice bridges and be lost for the usual driving of the timber, and, naturally, there will be a scarcity of water in the rivers towards the end of the drives. It may happen that nature and the elements may obviate these conditions but the men operating during the winter in the woods at the time of writing fear the worst.

## New Lath Mill of Pronounced Speed

The P. Payette Co., of Penetang, Ont., have just placed on the market a new lath mill which is known as the "Thoro-bred," it being the latest improved No. 2 equipped with five saws. The makers say that it will cut any quality of lath depending upon the amount of stock the operator is able to feed into it. Back of the new machine are forty-three years' experience in building lath mill equipment.

The "Thoro-bred" has the new tension springs encased in bonnets which regulate the pressure of the feed rolls and these are adjusted to any desired tension by the adjustment of the set screws on the top. The company recommend this machine for use with their No. 1 four-saw bolter.

There are several new features about the machine and the operator is well protected. The lath shover is safeguarded by a special convex guard on the front and the saws and rollers are protected on the top and sides by a steel plate hinged guard which may be thrown up to take out the saws or dropped instantly and automatically locked. This prevents all bolts and chunks from flying out and injuring the operators. The front and back tables can be adjusted to take up the wear of the saws and the guide can be adjusted to any angle.

The capacity of the machine is from 50,000 to 128,000, 4-foot lath, daily depending upon the quantity of stock the producer has to manufacture lath from. The guide on the machine is extra long and extra wide and is of double height on the front so that the lath shover can throw the bolt into the machine without using any extra precaution, thus increasing output.

## Dealer Gets Allowance on Counter Claim

J. A. Cody, lumber dealer of Newmarket, Ont., was recently allowed \$8,000 in a judgment handed down at Osgoode Hall by Mr. Justice Orde. The decision is on a counter-claim by Mr. Cody against Andrew McKean, of Collingwood.

Cody contracted with McKean to have the latter cut some wood for him at \$20 per 1,000 feet. The work was to be done during 1920-21. The total cut was to be 700,000 feet. In the meantime Cody contracted with another firm to supply them with lumber.

When McKean's saw mill burnt down he could not fill his contract and Cody suffered a consequent loss. The market price dropped also.

The judgment was for the loss suffered by Cody as the result of McKean's failure to supply the stipulated amount.

### The Drain on Canada's Pulpwood

Thirteen new paper making machines are being installed in Canada this year and it is stated that these thirteen, when erected and running full, will consume more than 350,000 additional cords of wood a year. Frank J. D. Barnjum, of Montreal the noted Canadian conservationist, states that, not counting these machines, Canada is already consuming and exporting annually more than 5,000,000 cords of pulpwood, representing the growth of a century or more, from 1,250,000 acres of land. He declares that every new paper machine installed in Canada and every new issue of pulp and paper securities brought out and sold to Canadians is an added reason for prohibiting the export of raw material.

Among the Canadian companies which are either adding to their present equipment or putting in new machines are:—The Bathurst Company, Bathurst, N. B.; Ontario Paper Company, Thorold, Ont.; Backus-Brooks Company, Kenora, Ont.; Donaconna Paper Co., Donaconna, Que.; Belgo Paper Co., Shawinigan Falls, Que.; Wayagamack Pulp & Paper Company, Three Rivers, Que.; Price Bros., & Co., Quebec and others.

### New Rossing Plants Are Starting Up

The St. Lawrence Lumber Co., whose head office is at 81 St. Peter St., Quebec, are installing a 10 x 30 foot Canadian barking drum at their plant at Amqui, Que. This organization purposes robbing its pulpwood with a Canadian barking drum.

The Hawk Lake Lumber Co., of Monteith, Ont., who some time ago secured another concession from the Ontario Government, is erecting a barking plant at Mile 45, west of Cochrane, on the Transcontinental, and will put in a Canadian barking drum. The company is carrying on extensive pulpwood operations in Northern Ontario.

### Looks Like Big Demand for Wood

Speaking of the pulpwood market in Northern Ontario, a leading operator from the Port Arthur district in conversation with the "Canada Lumberman" lately said that as far as prices and demand are concerned, it was too early yet to make any forecast because no wood is cut during the spring months for future delivery and no contracts or prices will be set or talked of until August "It appears as if American mills will have to look to our district for a considerable amount of wood annually and there is no doubt the wood can be produced in the Thunder Bay area for a number of years," he declared.

### Big Contracts Placed for Pulp Wood

The Hammermill Paper Co., of Erie, Pa., who conduct pulpwood operations in the Port Arthur district, have contracted for between 75,000 and 80,000 cords of wood, to be delivered to them during the coming season of navigation, f.o.b. vessel. It is understood that a large proportion of this wood is purchased from jobbers but, as in the past, the company have also bought possibly 15,000 cords direct from settlers. This they will drive and load themselves. The wood of the Hammermill Co. is now all landed on the river banks ready for driving, and with the amount of snow which the Port Arthur district had during the past season, it is not anticipated that there will be any trouble in taking out the drives.

The past winter was the best one, not only that the Hammermill people, but many others experienced in woods activities in the Port Arthur district for a number of years. Contractors went through the whole season practically without a break, and until the latter part of March had just the right amount of snow and, consequently, all jobbers are practically finished and will obtain their entire contract.

### Northern Concern is Building at Wasach

The Hawk Lake Lumber Co., Limited, of Monteith, Ont., of which A. E. Wicks is president, during the summer will ross 25,000 cords of spruce pulpwood and ship it out, in addition to 10,000 cords

that they have now ready to ship. June 1st will see no more unsold pulpwood piled along the railway either east or west of Cochrane. Labor was fairly plentiful last season although wages were higher than a year ago.

The Hawk Lake Lumber Company's plans also call for the building of a sawmill of about 30,000 feet daily cutting capacity, and installing a drum rosser at Wasach, Ont., during the coming summer to cut up 20,000 cords of wood now in the river at that point. This cordage is in addition to the 35,000 cords, already mentioned.

The company expect to saw 2,000,000 feet of spruce and some tamarac at Monteith this summer, all of which has been disposed of at a good figure. Mr. Wicks says that, judging from the inquiries received, a lot of lumber will be bought in Northern Ontario during the coming season.

### Big Pulp Wood Cut Around Port Arthur

Over 2,000 men were employed in the Port Arthur district during the past season in taking out pulpwood, ties and piling. The cut of pulpwood is estimated at 180,000 cords, 20,000 pieces of piling and 1,450,000 railway ties. About 500 teams were engaged in the work and the cash paid to the men was around \$750,000. Contractors pay 15 cents a piece for ties and \$2.50 for a cord of pulpwood. Nearly all the work in the woods is now carried out on the piece basis.

The past winter was a most favorable one for operations. The steady cold weather rendered camp conditions ideal while the liberal snowfall made it safe to assume that there will be lots of water this spring to carry the wood down into Lake Superior and Thunder Bay for booming or shipment to the mills.

Some of the largest operations in pulpwood and the quantities which they took out and the location of their camps, were as follows:—Fort William Paper Co., camps on the G.T.P., 200 men; 30,000 cords of pulpwood; Thomas Falls, camps at Shabaqua, 80 men; 10,000 cords of pulpwood, 150,000 ties; J. Greer, camps on G.T., 80 men; 10,000 cords of pulpwood, 100,000 ties; I. L. Mather, camps at camps at Sibley, 350 men, 30,000 cords of pulpwood; The Stevedore Company (H. Murphy and G. E. Farlinger), Nezhah, 400 men, 500,000 ties; G. E. Farlinger, camps on the G. T., 100 men, 10,000 cords of pulpwood; Scott Lumber Co., camps on Current River; 75 men, 10,000 cords of pulpwood; C. W. Cox, camps at Nipigon and Black Bay, 300 men; 25,000 cords of pulpwood, 15,000 ties, 20,000 piling; Thunder Bay Paper Co., supplies from local farmers, 150,000 cords of pulpwood; Detroit Sulphite Co., yards at the Mission, supplies from local farmers, 10,000 cords of pulpwood; Russell Timber Co., camps at Hurkett, 200 men, 30,000 cords of pulpwood.

### Big Pulp Plant to go up at Nelson

Kenneth Campbell, M.P.P., for Nelson, B. C., T. G. Howland and J. Jacobson, of Minneapolis, Minn., who are interested in the Howland & Waltz Pulp Co., of Minnesota, have completed arrangements as regards the waterpower in connection with a proposed pulp mill at Nelson. Messrs. Howland and Jacobson are holders of large timber limits in the Kootenay section which is specially valuable for pulp. Cruising of the timber and engineering work relating to the proposed mill will be undertaken at once. The estimated cost of the project is \$2,000,000.

### Wood-Pulp will Make Blotting Paper

An entirely new departure in the manufacture of blotting paper is forecasted by the Forest Products Laboratories of Canada (Dominion Forestry Branch), Montreal, as a result of an investigation recently carried out in their experimental paper mill. The best grades of blotting paper have hitherto been made from rag pulp, but the Laboratories have succeeded in producing a paper with excellent absorptive powers entirely from wood-pulp. The interesting feature of the new paper is that it contains a large proportion of pulp made from which, although plentiful, has found little employment in the pulp industry of Canada.

Timber Berth No. 200 in the Township of Morin on the North shore of Lake Huron containing 34½ square miles more or less. The limit contains mainly white pine, there is also a large quantity of spruce, cedar, birch and hemlock. A list of supplies on hand and equipment may be seen at the depot. A complete logging and driving outfit consisting of sleighs, boats, two gasoline launches, thirty-four horses, etc. Tenders will be received by Fraser & Co., 74 Nepean St., Ottawa, up to the 10th of May 1923. Further particulars may be had on application. 5-9

## The Canadian Land and Immigration Company of Haliburton, Limited

This Company owns in fee simple over 300,000 acres of timber lands in Central Ontario. These lands are well timbered with Spruce, Balsam, Hemlock, Basswood, Birch, Maple, Ash and Cedar and considerable Pine.

The timber on this property will be sold in blocks of from 10,000 to 50,000 acres with a reasonable time to take same off. Or the land and timber will be sold together.

There are two Railroads running into the property, one into the Southwest corner and the other into the Southeast corner.

This territory is so well interspersed with lakes and rivers that the cost of getting out the timber is comparatively small.

As the property is held in fee simple there are no Government dues or restrictions as to manufacture, therefore, anything cut on the property can be exported in its raw state.

Maps and plans and further particulars will be given on application to the undersigned.

W. H. LOCKHART GORDON,  
Managing Director,  
79 Adelaide Street East,  
Toronto.

6-9

### For Sale

# Review of Current Trade Conditions

## Stiffer Quotations Go Into Effect at Ottawa

Sharp price advances ranging from two to fifteen dollars per M. took place in manufacturer's prices, and effected practically all grades of stock, in the Ottawa lumber market during the opening period of April.

Good sidings in all grades advanced from five to ten dollars per thousand feet. Two grades of good strips advanced \$15 per M., and good shorts and box boards went higher under the new quotations. The new price on good pine sidings 2 by 7 in. and up, the highest price listed on the Ottawa market, was \$175. One and one quarter inch and one half inch in the same grade, advanced to \$170. Good pine strips one and a quarter by one and one half inch, formerly selling at \$120 per M. went up to \$135. The two inch stock in the same grade made a fifteen dollar advance.

All the red pine grades showed an advance, as did some grades of mill run spruce. Lath advanced from one to three dollars per thousand pieces.

The announcement of the new manufacturer's prices, followed on a spring market which was only fairly active, but which showed much promise of improving. Only two factors appear visible in the upward trend of prices, which had been formerly predicted by the correspondent of the "Canada Lumberman." They were the increased building activity in the United States, and the shortage of many grades of stock, in the Ottawa Valley.

Shortly after the advance of the manufacturers was learned, the information was also received by your correspondent that some buyers had already put in orders for part of the 1923 sawmill cut.

Orders from the United States showed only a slight increase with those received in March. Inquiries were more numerous, and were indicative of better business. The call from the U. S. for box boards and even mill culls, was taken as a prophetic symptom of the demand for the year. The jump of from ten to fifteen dollars advances in the better grades, indicated that the lumbermen were now sure of a market and the old trade law of supply and demand was beginning to assert itself.

The furthering of shipments, created by former orders, grew a little better due to the more springlike conditions, and the lifting of some embargoes at American entry ports. There were, however, still many entry points under embargos which are causing local shippers considerable worry. The car situation was easier.

The domestic demand, while it showed some improvement, did not keep pace with the demand from the United States. Building prospects, however continued fairly bright, but the most unseasonable weather which prevailed over the first part of the month, held back a considerable amount of building. The new Auditorium, which will cost close to \$200,000 and a new bank on Sparks Street by the bank of Nova Scotia are two of the largest building projects in view.

The March building permits indicated well of the future, when 35 permits were issued calling for construction having an estimated valuation of \$90,225. Up to March 31st, there had been 57 permits issued calling for building valued at \$145,698. Permits for larger projects which will be gone on with, have not yet been granted.

Reports from the woods camps indicate that a fairly satisfactory season has been passed, and the indications are that the cut has been considerably increased. All the operators are waiting for now is the thawing of the snow to provide water to float their logs to the mills. Owing to unusually cold weather which has prevailed, it is not likely that many of the sawmills in the Ottawa Valley will be able to get under way until around May 1st.

Conditions with the woodworking plants and factories was reported as being slow, with a large amount of labor available. From present signs it does not look that there will be any advance in the wages of plant or factory in 1923.

Other conditions, as applicable to the market, did not show much, if any general change.

## St. John Reports Good Demand and Firm Prices

According to a general impression of the lumber dealers in St. John, N.B., the demand for lumber this spring will be heavy. This is due to the fact that there is a building boom on in the United States. Prices remain firm and the latest quotations from the American market show that the price for Provincial random is \$40 per M. This is attributed largely to the fact that it is difficult to get shipments through, owing to car shortage and embargoes. During

the last few weeks the figure for Provincial random increased three dollars.

While the American market is good, the same cannot be said of the English demand. However, considerable quantities of stock are being shipped by some of the ocean going liners and the hope is expressed that matters will, at least, hold its own until conditions in Europe become more stabilized.

One large dealer referring to the state of the English market said it would be much better if it would become stable than to show any sudden strength and then drop off again.

There is a fear expressed among some dealers regarding the labor question and it is said that large numbers of skilled hands are leaving these parts, drawn away by lucrative offers from other centres. If this continues it is bound to have a detrimental effect on conditions generally.

With reference to the price of spruce it is pointed out that it is being kept down as a result of western shipments.

## How Quebec Exporters View Lumber Outlook

With one exception, Capt. John F. Burstall, head of the timber firm of John Burstall & Company, the reports from representatives of Quebec firms, who have been in the United Kingdom since the beginning of February, are, to say the least, not very encouraging. Capt. Burstall, who is as popular in England as he is in Canada, has sold more timber in the British market this trip than he did in 1922. His good fortune in this respect was related by one of the firm's partners recently to the Quebec correspondent of the "Canada Lumberman." This does not, however, mean to convey that the other Quebec representatives in the United Kingdom are not getting a fair share of the trade. It does mean, however, that they are not meeting with the business success which they had anticipated before going abroad, and, at the same time, goes far to corroborate the previews of the situation as forecasted by your correspondent in these columns.

In the meantime, present indications must not be construed pessimistically for judging the situation as it really exists. Canadian export firms must make allowance for the political difficulties which still remain unsettled in Europe to influence United Kingdom importers in cautious, conservative purchasing, though it is generally conceded by British financial and industrial experts, provided that there is no new war, Great Britain has entered upon the road to recovery and that 1923 will show a substantial advance over the trade of 1922.

Nevertheless, there is a feeling of nervousness prevailing in the minds of the monetary interests in England at the prolongation of the overtures made in national European diplomatic circles for the consummation of peace. This was evidenced in a large number of company meetings held in the various centres of Great Britain during the month of March, which were characterized by the terse speeches made and the remarks that "it was as difficult now, as in 1915, to say anything about the future, by reason of the deferment of that peace in the world which is greatly longed for." The latest reports, however, received since the holding of these meetings, tend to dissipate their expressed fear. The reports, while not specific as regards to certainty, give hope that the political situation overseas is clearing and that a silver lining has made its appearance in the dark clouds, with the prospect of a peaceful settlement of the Near East question in the early future as well as the Ruhr difficulty.

In so far as the United Kingdom is concerned, it must be recalled that 1922 was a year of depression in trade as a whole. Notwithstanding, as the year grew older, business picked up wonderfully to restore confidence. The same may result, even to a greater degree, in the second half of 1923, in which the Canadian timber exporter will assuredly share.

It is evident that the Irish Free State Government will overcome the rebellious opposition in the course of another two months, or three months at the longest period. When this much-looked-for result does occur, a construction boom will follow in Ireland that will cause a large demand for Canadian lumber. This is the opinion of the agents of the Quebec export firms in the south as well as the north of Ireland who have their eye continually focussed on the situation.

The great drawbacks these days to normalcy in the United Kingdom, as well as in the United States and Canada, are demands by skilled and unskilled labor, which have become so acute to the

## ***“On Time” Delivery***

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

***“Rush Orders Rushed”***

# **Cleveland-Sarnia Sawmills Co., Limited**

**SARNIA, ONTARIO**

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

disadvantage of the world's re-establishment towards normalcy, that it must be met with drastic measures. The latest reports from Great Britain announce a demand for higher wages in the building trades which, if persisted in, will undoubtedly curtail construction. The same conditions apply to labor in Canada, especially on account of the shortage of skilled help in the building trade, which is having the effect of investors postponing their operations.

Here in Quebec and the surrounding district, where there is a shortage of dwellings, many persons who were inclined to invest their capital in construction and had planned to carry out their intentions during the spring, have become frightened by the aggressive demands of labor, and, in consequence, have decided to withhold their money until the labor market becomes more sane.

In the meantime, the general investing public place the blame on the federal government and the provincial legislatures for pandering continually to labor and its vote, to the detriment of capital and the general public. It is pointed out that labor is only eight per cent of Canada's population and yet the federal and provincial administrations encourage the eight per cent to the detriment of the remaining ninety-two per cent. The latter, of course, is not organized as unions, the same as the former, and, for this reason, the legislatures agree to persecute the brains of the country in favor of the brawn. The day may come when the intellectual and capital interests of Canada will organize for self-protection and, when that time arrives, the legislative bodies of the Dominion, municipally as well as parliamentary, will be forced to respect the best interests of the country at large.

### Business in Ontario Continues its Favorable Swing

Business in the lumber line continues good although the unfavorable weather at many points has retarded structural operations. However, sales are progressing favorably and prices, owing to the scarcity of stock, show a decided tendency to stiffen. There is a shortage of dry stock at shipping points and wholesalers, who have widths and thicknesses that are in demand, are considered fortunate. The cut this season at all mill points will be very large and it is expected some plants will be in operation by the end of April. It is believed that log-driving conditions this spring will be favorable and labor steady and abundant at most producing centres.

The lath market is very strong at the present time and many inquiries are being received, particularly for spruce lath, which are being shipped in large quantities across the border. The car situation, which seriously interfered with lumber shipments to American points, has improved greatly and a number of embargoes have been raised.

Several more stocks of softwood have been sold at a considerable advance over last year which is in itself a good indication that 1923 will be one of steady trade and increasing confidence in the lumber arena.

Building permits are keeping up well at all the larger centres, and if there would be a general trade revival there would be little to complain of in the whole lumber line. The one great peril is that of runaway prices, and while manufacturers and wholesalers are doing their best to ward off such an undesirable state of affairs, it would look as if the danger point is being approached in certain sales.

Everyone concedes that the lumber business will be active until the end of June but after that no one cares to make predictions. When the new stock comes on the market in large quantities, it is not known whether prices will maintain their present level or recede to a considerable extent.

In the hardwood line there is a large call for birch, elm, maple and basswood. The demand for 5/4, 6/4 and 8/4 No. 1 common and selects and 4/4, 5/4 and 6/4 F.A.S. is good. The call for 8/4 F.A.S. appears to be slow at the present juncture. Dry lumber remains scarce, of course, with the supply of several lines being inadequate to meet the needs of the trade. There seems to be a belief prevalent that lumber manufacturers will this season not have any serious operating difficulties to contend with and they will be in a position to maintain an adequate supply.

Eastern representatives of Coast mills report that there is a fair demand in Ontario and Quebec for mixed car lots and rough clears. The shingle market is rather dull just now but is expected to pick up very soon. While it is not easy to get car lots of many materials, from the Coast, owing to the heavy demand from across the border and the large export trade, it is still possible for shrewd eastern salesmen to closely watch mill stock sheets and have mixed carloads of flooring, ceiling, casing, base, etc., made up and sent in transit. They are able to dispose of this on a satisfactory basis in most instances.

On the whole trade in the lumber line is encouraging with a good basic foundation, and if the farmers have a good crop in 1923

there is no reason why rural retailers, with whom business has been rather dull for some time, will not enjoy a splendid turnover and increasing demand for their products. It may be stated that many yard men are waiting until a consuming demand actually sets in before stocking up to any greater footage basis than what they have in hand at the present time.

There is activity in hardwood flooring and manufacturers report that business with them is very good at the present time and sales are generally running ahead of the corresponding month of last year. All plants are busy and prices in every line of flooring are firm. There was recently an increase of \$5.00 per M in No. 2 factory flooring in maple, birch and beech.

There are grave dangers of a runaway market in the lumber line in spite of all that has been said against it and every precaution that may be taken to guard against a circumstance of this kind. Lumbermen admit that runaway values will prove disastrous to the trade through discouraging building activity. Strange to say the present market is being established by over-eagerness on the part of purchasers rather than a high-price disposition by manufacturers, so certain lumbermen declare.

### Montreal Lumber Orders Represent Big Gain

Conditions in Montreal continue to be satisfactory. Orders received during the first quarter of the year represent a substantial increase as compared with the same period in 1922, with prices higher in every line. The outlook for the immediate future is good, in that people can reasonably expect an extension of general business. Trade reports, both as to domestic and export business, are favorable, and, after all, the lumber industry is mainly influenced by general trade conditions.

There is still a strong demand for spruce by American buyers, who are placing orders for the new cut at values which represent a considerable advance on those paid early last year. The car situation has improved, giving wholesalers a chance to catch up with many shipments delayed on account of lack of cars.

In B.C. forest products, there is a demand for timber for the large contracts for dams and other important jobs which will be carried out this season in the province of Quebec. A considerable amount of timber has already been sold, and other substantial quantities are called for. Prices of B.C. woods continue high.

Some retailers are adopting a cautious policy in the matter of purchasing. These are of the opinion that the advances in the prices of lumber and other building supplies will retard construction, and under such circumstances, retailers declare that they are not prepared to buy stocks for which the demand is likely to be slow. The figures of the building permits for Montreal, however, do not support this theory. For the month of March the total was \$1,999,200., an increase of \$1,063,487., while for the first quarter of the year the total was \$3,803,910, a gain of \$2,090,637. There are indications that workmen will want more wages; bricklayers have already intimated that they will ask for \$1.00 per hour, and at a meeting of the building trades in Montreal it was foreshadowed that higher pay will be expected when the season opens. Greater cost of living was stated to be the ground of the request for more money.

The exports of pulpwood are increasing. While those for February totalled 99,830 cords of a value of \$866,128., compared with 133,328 cords, valued at \$1,795,886. in January, the total for the eleven months of the fiscal year show a substantial increase. Thus for the current year they were 982,969 cords, valued at \$9,772,219., as compared with 728,969 cords valued at \$8,923,167., in the previous eleven months. Both American and Canadian pulp and paper companies have been steadily eating into their piles, owing to the immense demand for newsprint. The stocks in dealers' hands are reported to be low. Prices have recently advanced and \$14.00 to \$15.00 per cord for peeled wood, f.o.b. point of shipment, are now quoted.

### Encouraging Demand for Western Lumber

In British Columbia the lumber industry continues to be active, although changes now contemplated in foreign tariffs may, if brought into force, interrupt the present large volume of exports, states the Bank of Commerce Commercial Letter for March. At present there is a heavy demand from the United States and a revival in buying from the Prairie provinces and Australia, while Japan, India, the United Kingdom and South America continue to press their demands. The only drawback is a shortage of vessel space, which is expected to continue during the next two months. Loggers recently advanced prices \$1 per thousand feet, and stocks are low, but this will remedy itself as soon as weather conditions are more favorable for towing. Reports from central and eastern Canada as to the demand for lumber are of an encouraging character.

# CAMP PROVISIONS

TEA, COFFEE,  
FIGS, PRUNES,  
PICKLES, PEAS,  
BEANS, RAISINS,  
MOLASSES,  
SUGAR  
CANNED GOODS

Camp operators and boarding-house keepers who avail themselves of our provisioning service are rewarded with very low prices on many lines. These are made possible by our wholesale grocery business which permits us to buy in large quantities, to take advantage of every cut in the market and pass it on to our customers. Ever since commencing our business we have paid particular attention to supplying lumber and contractors' camps and have developed a service which is all that could be desired.

Let us quote on your requirements. Samples furnished.

## EDGINGS

St. Lawrence Paper Mills, Limited, of Three Rivers, Que., have increased their capital stock from \$1,200,000 to \$1,700,000.

James Richardson & Co., Cap Chat, P.Q., are contemplating the erection of a sawmill which will cost about \$10,000.

Henry Sayers, a well known lumberman died recently at his home in Speyside near Milton, Ont. He was 75 years of age and unmarried.

The Jamieson Lumber & Shingle Co., of Everett, Wash., have taken over the shingle mill of the Red Cedar Shingle Co., Kerr Road, Burnaby, B.C.

The Donnacona Paper Co., of Donnacona, Que., are erecting a new pulp mill which is of brick construction 164 x 110 feet and two storeys high.

A. E. Carter, Limited, Fort Frances, Ont., is a concern recently incorporated to carry on a general lumbering business, with a capital of \$40,000.

Lausophe Nault, Limited, Quebec, Que., was recently incorporated to manufacture and deal in lumber and pulpwood. Capital \$145,000.

The sawmill of Ernest Rousseau, Notre-Dame-De Rimouski, Que., was destroyed by fire last month causing a loss of \$5,000. The owner expects to rebuild.

Rogers Lumber Yards, Limited, have received supplementary letters patent authorizing them to decrease their capital from \$2,000,000 to the sum of \$1,000,000.

Fire totally destroyed the barrel and cheese box factory of Collier & Cole at Picton, Ont. The entire stock of barrels for the summer business was destroyed. No insurance was carried.

The Fesserton Timber Company, Limited, Toronto and Vancouver, have opened an office at B 6 Board of Trade Building, Montreal, Mr. C. McDonald is in charge of the branch.

Mortimer Parsons, who was prominent in shipbuilding during the period of the war and from the Parsons shipyards launched several fine ships, died recently at Cheverie, N.S. He is survived by his wife, one son and three daughters.

A. C. Manbert, of the Canadian General Lumber Co., Toronto, who spent several weeks with his wife and family at La Jolla, Cal., has returned home. He greatly enjoyed his holiday and is feeling exceptionally well after his sojourn in the South.

Hammermill Paper Co., Limited, Erie, Pa., was recently granted a provincial charter to manufacture paper products and pulp, provided the company does not use in Ontario more than \$500,000 capital.

A. E. Clark, of Toronto, former president of the Canadian Lumbermen's Association, and Mrs. Clark, who spent six weeks at Sea Breeze and other points in Florida, have returned home after a very enjoyable holiday.

Horace W. Brownlee, manager of the Beaver Company's lumber yard at Rosetown, Sask., was fatally injured recently when a ladder on which he was descending slipped on the icy ground. Mr. Brownlee's head struck the ice, his skull was fractured and he died a few hours later.

The Star Flooring Co., 618 Brock Ave., Toronto, a new firm recently began the manufacture of hardwood flooring. They have installed several new machines and already report that business is very brisk.

The tern schooner Stewart T. Salter, now laid up at Parrsboro, has been chartered for the season from Parrsboro or vicinity for Boston, Sound or New York at a good rate by the Bay of Fundy Lumber Company.

Donald O'Connor who was widely known in lumbering circles in Ottawa, died recently after a lengthy illness. He was in his 80th year and came to Canada from Ireland when a youth. He had resided and worked in the Ottawa Valley ever since landing in the Dominion.

The Haileybury Lumber Co., Limited, Haileybury, Ont., is a new company organized to manufacture and deal in lumber and wood products. Capital \$100,000. Two of the incorporators are M. J. Conkey, and G. F. Summers, both of Haileybury.

The Manitoba Pulp & Paper Co., Limited, Winnipeg, has recently been granted a federal charter to take over the firm known as Manitoba Pulp & Paper Co., Limited, and to manufacture me-

chanical and sulphite ground wood pulp and paper products. Capital \$3,000,000. Two of the incorporators are J. D. McArthur and B. J. McLeod, both of Winnipeg.

The Mageau Lumber Co. expect to have their new mill at Field in operation very soon. The company, of which Z. Mageau, M.L.A., is president and H. O. Tremblay, secy.-treas. say that they intend making considerable improvements around the premises.

C. J. Gardiner, a well-known lumberman of Victoria and proprietor of the C. J. Gardiner Logging Co. at Nitinat, B.C., was killed recently when he was caught between two logs. He sustained several broken ribs which pierced a lung. Mr. Gardiner is survived by his widow and one daughter.

The Entertainment Committee of the Wholesale Lumber Dealers' Association will have charge of the dance which will be held at the Metropolitan Assembly Rooms, College St., Toronto, on Friday April 27th. Mitchell's orchestra will supply the music and arrangements are being made for a delightful gathering. The attendance promises to be large.

W. K. Jackson, president of the New Ontario Colonization Co., whose Ontario headquarters are at Jacksonboro, recently erected in Buffalo, N.Y., a handsome six-storey office building at the corner of Delaware Ave. and Chippawa St., which is known as the Jackson Building. Mr. Jackson will move into the new structure about the 1st of May.

A fast-cutting band mill to manufacture into lumber the small hemlock and balsam to be taken from the area to be flooded, is in course of construction at Stave Falls, B.C., by the Stave Falls Lumber Company Ltd. The new mill will have a capacity of 10,000,000 feet per annum running one shift and will be modern in every respect.

The Chinese employees of the Rainbow Shingle Mill at Port Coquitlam, B.C., struck en masse lately, not for increased pay but because a white man got a job—on a saw; a genus of employment the Oriental regards as their peculiar monopoly. The white man should have got a special permit from the Chinks, it is supposed.

The entire sawmill plant, valued at \$250,000, of the Dominion Creosoting & Lumber Company's mills on the North Fraser, South Vancouver, was destroyed by fire recently, the result of a spark blown from a mill-burner lodging beneath the floor of the engine-room. About 200 hands were employed, and many will be "laid off" till the mill is rebuilt.

Canada Power Tree Saws, Limited, Winnipeg, Man., have been granted a federal charter to acquire the patents of a new improved saw known as "Peters Separable Link Tree Saw," and to manufacture and deal in separable link tree saws under the acquired patents. Capital \$100,000. F. F. Peters and T. R. Aiken, both of Winnipeg, are two of the incorporators.

Representatives of a syndicate of New York and other eastern newspapers were in Victoria, B.C., recently negotiating with timber owners for the purchase of 7,000,000,000 feet of pulpwood on the Skeena and Kispiox rivers. It is planned to establish a pulp and paper mill for newsprint in Northern British Columbia at or near the city of Prince Rupert. Prospective shortage of newsprint in the United States will doubtless result in the establishment of other mills in the province.

At a recent meeting of the Rotary Club in Peterboro, Ont., R. A. Brown gave an interesting address on the necessity of Canada paying more attention to reforestation. He said the pulpwood of the country was becoming rapidly exhausted and unless reforestation was undertaken on an extensive scale, there would either be a paper scarcity or new materials would have to be used, in which case the cost of paper would be likely to increase.

Newsprint, wood pulp and lumber are the chief products that contributed to the increase of Canada's exports to the United States for the eleven months of the present fiscal year, as compared with the corresponding period for the last fiscal year. The group of wood, wood products and paper, to which these articles belong, account for more than half of the total increase of \$63,000,000 in the total exports to the American Republic.

Angus McLean, president of the Bathurst Company, Bathurst, N.B., and head of the Canadian Lumbermen's Association, who recently attended the annual meeting of the National Wholesale Lumber Dealers' Association in Pittsburg, states that the completion of the new paper mill has been somewhat set back because of waiting for machinery. Every one of the electrical firms who have contracted to supply equipment, is behind in its deliveries and erections. The reason assigned is that there is so much business even at the advanced prices, that the electrical manufacturing concerns have been overlooked. Mr. McLean expects that the new paper mill will be completed and operating during the summer.

Linn Logging Tractor in operation by Austin & Nicholson Limited, in their limits near Esher, Ont. Above illustration shows Linn Logging Tractor with train of eight sleds of 16 ft. green Jack Pine logs

# THE LINN LOGGING TRACTOR

Austin & Nicholson Limited commenced operation with their Linn Logging Tractor about January 20th. Their haul was about  $6\frac{1}{2}$  miles long and their daily average was about 112,000 feet. Mr. Nicholson claimed that their daily total was limited through delays in loading and forwarding out of sleds to tractor. He figured that during their first month's operation, they had saved approximately \$85.00 per day over their previous year cost of haulage with horses. They went through their entire haul without any mechanical adjustment whatever—and previous to entering their service—their operator had never seen a Linn Logging Tractor.

This is the second of a series of photographs of Linn Logging Tractors in operation by Loggers in Ontario and Quebec. The next will appear in the May first issue.

We have claimed much for the Linn Logging Tractor—but its performance has, in many operations, far exceeded our claims.

*“Ask the logger who uses one”*

## MUSSENS LIMITED

Philips Place Building

Montreal

By the clever use of Asphalt Slates, a broad expanse of roof that would otherwise be monotonous, is made interesting.

### *A Contribution to the Interest and Charm of Modern Homes*

To see on every hand, an increasing number of homes made more beautiful because of Brantford Roofs is surely ample reward for the years of creative efforts put forth by this organization.

There is evidence too that Brantford Roofs are as practical as they are beautiful, for Brantford Asphalt Slates are unchallenged leaders in Canada.

**FOUR COLORS**—Brantford Asphalt Slates have the unfading colors of the slate with which they are faced—Blue-Black, Red, Tile-Red, Green—and any desired combinations of these colors.

Distributed under Brantford Roofing Trade Marks, through Brantford Roofing Dealers. Stock carried, information furnished, service rendered by our dealer in your district. Write for descriptive literature, or advice on Roofing problems.

**BRANTFORD ASPHALT SLATES** in 4-in-1 Slabs; **BRANTFORD WINTHROP TAPERED ASPHALT SLATES** with the heavy butt; **ARRO-LOCK SLATES** (red or green) for diagonal effects—may be laid over old roofs.

# **Brantford Roofs**

# The Carriage You Are Looking For

## Our No. 1 Size

**CARRIAGE**—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

**SET WORKS**—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

**FEED WORKS**—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

# GATES FURNACE

**For Burning Sawdust  
and Hog Fuel**

*Will burn tan bark, hog fuel  
and sawdust efficiently, with up  
to 60% moisture.*

Gates Air Cooled Sus-  
pended Arches

Boiler Door Arches and  
Jambs

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned. Note that fuel is partly dry before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace. All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline gates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowering, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

## Resurface Your Roof

A coat of Reed's Roofing Cement—Plastic, Semi-Plastic or Liquid—will add years to the life of your roof.

This cement is the result of over Seventy Years practical Roofing experience. It will not peel nor blister and is absolutely unaffected by climatic changes.

Easy and inexpensive to apply. Ordinary labour can be used with satisfactory results.

Special prices by the barrel—Ask for them.

## Geo. W. Reed & Co. Ltd., Montreal

# A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

HOME OF THE ADAM HALL LEADER

## Old Timers Know the Value of an ADAM HALL Camp Range

Back in the nineties when camp conditions were not considered to the extent they are to-day, Adam Hall's Ranges and Heaters did much to brighten camp life. Old timers have a warm spot in their hearts for these faithful servants. They were always the centre of warmth and cheer.

To-day the name "Adam Hall" is even more familiar. The "Leader 10-36A" Range is famous throughout Canada for its convenience and economy. It is the result of many years experience in meeting the requirements of lumber camps. Ruggedly built in two sizes, it will stand up under the hardest kind of service. Coal or wood. Ask us for particulars.

Write for Catalogue and Prices.

Pioneer Manufacturers of Camp Ranges and Heaters

## Let Him Be the Judge

*and Swift's Products will be his choice*

Old-timers in the lumber camps are keen critics of the food served and many a time have slipped away to another camp because the grub was better. Their preference for Swift's products is thus high tribute to the quality.

But the camp operator must consider other things. Supplies ordered must reach him promptly, in good condition, and without substitution. To ensure him this service, branches have been established from coast to coast, each carrying a very large stock ready for immediate shipment.

Why not take advantage of the perfect facilities offered you by the most up-to-date Packing House in Canada? One order will convince you of the superiority of Swift products and service.

# Easy as Shovelling Fuel Down a Hole

When you are burning wood refuse, slabs, etc., in a National Stoker you might just as easily be shovelling it pell mell, any-way-at-all, down a hole, for all the trouble it is. The grates have 30° incline and the pusher rods that operate the various banks of grates keep the fuel marching steadily downward, without avalanching, to combustion, with unfailing accuracy and practically no labor.

The National Stoker burns wood waste without expert firing. No careful spreading or placing is required. The downward sloping grates do away with the great labor of handling a big pile of refuse on horizontal grates. Dust and shavings can be blown in, while sticks or slabs may be passed through the fire door as usual. As the fuel is consumed the ashes are worked down towards the dump plate by levers operating pusher rods, from the front of the furnace. While the fuel moves down the grates under the hot arch it is consumed completely, no fuel being carried over the bridge wall into the combustion chamber, thus ensuring practically no smoke.

The National Stoker is very popular in wood working plants and mills. Let us send you an illustrated, descriptive booklet.

## "Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

## Log with "Caterpillars"

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in logging work, winter or summer. Its flexible tracks enable it to climb over obstructions, cross ditches, and operate continuously both on and off the road. It is easy to control, turns in its own length and provides correct speeds for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. The Abitibi Power & Paper Co. at Iroquois Falls, Ont., is logging the "Caterpillar"\* way. Let us give you the facts on their operations.

*\*There is but one "Caterpillar"—Holt builds it*

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

# A STURDY MEDIUM CAPACITY RESAW

This band resaw is considered the best of its type. One of its finest features lies in its capability to cut accurately. Takes stock up to 30 inches wide, 12 inches thick. Can be used for straight resawing, or by tilting the feed rolls, will saw bevel siding. Is an ideal machine for this purpose.

The yield rolls are at the left or outer side of the machine. The first infeed- ing roll at the left has an independent yield, which allows a thick board follow- ing a thin one, to be properly presented to the blade. Eight rates of feed 25 to 185 feet per minute are instantly available.

Upon request we will mail you circular which illustrates and outlines this ma- chine fully.

# ATKINS

## STERLING QUALITY SAWS

### Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

### Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan,

***"The Finest on Earth"***

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

## E. C. ATKINS & CO.

Established 1857

The Sterling Quality Saw People

Canadian Factory, HAMILTON, Ontario

Branch carrying complete stock, VANCOUVER, B. C.

**MADE IN CANADA**

This is the machine that is known as "the last word in band mill construction".

In design and construction it represents the very best which science has to offer. And practice has proved that these principles are right. The "Long" Band Mill is the machine for economical production, freedom from breakdowns and long life.

The following brief description is interesting: Columns of full hollow box section, jointed at

the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible. Guides swing on centre line of saw. Guide Blocks adjustable in all directions; quick opening, non-breakable pattern. Upper and lower bearings the same size and interchangeable: Chain oiling, water cooled, adjustable in all directions. Protected steam cylinder to operate upper guide. Dake engine to handle upper wheel.

May we forward you more complete details?

## THE E. LONG MANUFACTURING CO., LIMITED ORILLIA - CANADA

A. R. Williams Machinery Co., Vancouver and Winnipeg  
Gormans Limited, Calgary & Edmonton      Williams & Wilson, Ltd., Montreal

# Waterous Boilers

## Are Best for Sawmill Use

You can get the best efficiency and satisfaction in steam production by using *Waterous Return Tubular Boilers* installed the Waterous way.

They are economical of fuel—carry plenty of steam in reserve for use in emergencies—can be used with hard

and dirty water—they are easily cleaned and readily taken care of.

Our boiler settings—*both full front and duch oven*—are dimensioned and designed to best handle the various fuels used in the sawmill. We can guarantee to give you the

most perfect combustion, with the least amount of work and attention, whatever kind of fuel you burn. We build both brick and full steel settings for all size boilers, single or battery.

Waterous Return Tubular Boilers are built for all Provinces—any size up to 165 HP.

*Write for New Catalog.*

*Here it is!*

### The Handiest Lumber Truck Ever Made

Just what you need for the lumber yard—a TUDHOPE-ANDERSON DETACHABLE LUMBER TRUCK.

Note these features: The wide-tired steel wheels cannot come off whether going forward or back. Axles (13 1/4") are high quality square steel. Tires are 4 1/2" wide. If wheel spokes become bent or broken they can be replaced—an exclusive feature of Tudhope-Anderson trucks. Wood parts are best oak, air seasoned and kiln dried, well ironed and strongly braced.

# Kendall Gang Circular

*The Machine that will convert your small logs into more and better lumber, quicker than ever before.*

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me \$1.00 to \$1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

## We are the original manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.

32-in. saws for 10-in. cants.

36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

—:—

CANADA

In these days of keen competition, QUALITY TELLS, and so far as Lumber is concerned we believe we can safely say we can furnish QUALITY combined with the BEST OF SERVICE.

At the present time we have a considerable quantity of

# 1" No. 1 Common Cedar

This is particularly desirable stock, being a SMALL-KNOTTED type and will make excellent Boards and Shiplap, also a good cheap Siding or Ceiling. Try a car and we feel sure you will be surprised at its superiority.

We also manufacture FIR and Spruce. As DIMENSION, our FIR can be strongly recommended, and GOLDEN SPRUCE already has a string of steady users in Eastern Canada.

Our sawmill, with a daily 10-hour cutting capacity of 200,000 feet, is the largest in the interior of British Columbia. We run all orders through the planing mill at time of shipment so that our stock always reaches you bright, clean and newly milled.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

## WHAT'S IN A NAME?

In every class of business one name stands forth to attest the fact of leadership through Quality.

The name itself is a pledge of recognized worth,—of an unfailing standard.

“Big Chief” Brand lumber and shingles lead. Why? —Because their name is dedicated to perpetuate Quality.

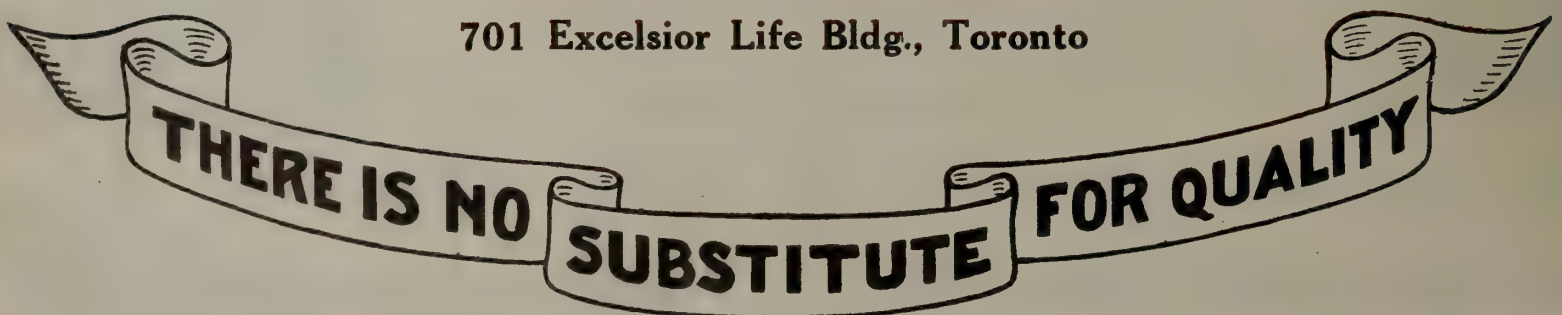

For in the last analysis,—Quality is the synonym of True Economy.

## SEAMAN-KENT HARDWOOD FLOORING

The manufacturing and distributive chain of factories and warehouses, continually at work supplying the nation-wide demand for Seaman-Kent Beaver Brand Hardwood Flooring, are shown below.

*"Organization  
is the heart  
of progress"*

EDWARD H. STANNERS  
Sales Manager.

GEORGE T. BISSELL  
Secy. Treas.

ROBERT S. IRWIN  
Supt. of Plants

**T**HE extensive and thoroughly modern organization of the Seaman-Kent Co., Limited, is entirely responsible for the firm's premier position in the Hardwood Flooring World of the British Empire. From the timberlands of Canada to the beautiful finished product in Canadian Homes, the work of production and distribution is expertly handled. Four factories and the same number of warehouses, in the East and West, equipped in the most up-to-date manner, carry on the work of supplying the huge demand—ensuring careful attention to raw lumber (proper kiln drying and cooling), highest skill in manufacture, an exacting standard of grading and testing, and finally an unexcelled service of supply to dealer and private purchaser.

Nothing is overlooked that spells success to the consumer. Seaman-Kent Beaver Brand Hardwood Flooring truly lives up to the slogan "Best That's Made in Every Grade".

### LONDON CONCRETE MIXERS

are built to give continuous service under  
the most exacting conditions. They do  
rapid work and produce concrete with low  
labor cost.

LONDON MIXERS are being specified  
by engineers who know from experience  
that the first cost of a machine should not  
be the deciding factor when purchasing  
equipment. Slow production and break-  
downs put the contractor out of business.  
The contractor can rely on the "LON-  
DON" when profit depends on constant  
service and rapid production.

# News of Interest to Lumbermen

## NO MORE RUBBER WORRIES!

With absolute confidence, you may say, no more rubber worries "GOLD SEAL" rubber footwear, a trade mark on rubbers, which is compared to the "Sterling" mark on silver, is to be marketed in Canada.

Since 1872 this SUPER QUALITY rubber footwear has held the same high standard.

"GOLD SEAL" rubbers contain only the purest rubber, compounded to retain its resiliency, yet to resist the bumps and thumps of the hardest usage.

Its reliability for strength and climatic conditions are especially valuable to lumbermen.

THERE are cheaper rubbers manufactured than "GOLD SEAL" but none so low PRICED, considering the comfort you get per foot, the wear you get per day, the value you get per dollar.

**SPORTO**

Won't freeze, crack, peel or leak. No shoddy, no duck fabrics, no rubber substitutes used in the manufacture of this shoe. Sporto Boot is lighter and more pliant. Keeps your feet from feeling tired.

**LINCOLN**

Just a made-to-order shoe for lumbermen. Will outwear 3 pair ordinary rubber shoes. No amount of twisting or bending will crack the pure para rubber used.

Can also be had with heel.

**LIGRO**

A Firm Grip With Every Step  
No sliding or slipping with Gold Seal Ligro. No danger of poor foothold.

This patented Grippo Sole is found only on rubber footwear with "GOLD SEAL" stamp.

This Ligro is a member of the famous "GOLD SEAL" family. The largest selling line of footwear.

### Stock in Toronto

We will carry a complete stock of "GOLD SEAL" Footwear in our Toronto Warehouse, which invites service.

*Send for catalogue or have our representative call.*

# The Allied Footwear Company of Canada, Limited

29 Temperance Street, TORONTO

SOLE DISTRIBUTORS AND DIRECT FACTORY REPRESENTATIVES FOR CANADA AND NEWFOUNDLAND

# Shimer Products Famed Throughout the Industry

**"EFFICIENCY" and "ECONOMY"**—these two words tell in a nutshell, the story of Shimer success.

Take the Fast Feed Expansion Matcher Head (with 12 High Speed Bits) for instance, and note how this efficiency and economy is the direct result of scientifically correct construction.

The head is built heavy where the strain is greatest, and being devoid of all angles or openings, the wind resistance is lessened, and it cannot block with shavings. The straight knives are long, which assures greater service, while the circular knives can be set back and the straight knives jointed. In this way, the whole width of the straight knives can be jointed at one setting. The circular cutter is then brought to its proper position.

Let Shimer heads reduce *your* costs. Full details upon request

*Will burn tan bark, hog fuel  
and sawdust efficiently, with up  
to 60% moisture.*

Gates Air Cooled Sus-  
pended Arches

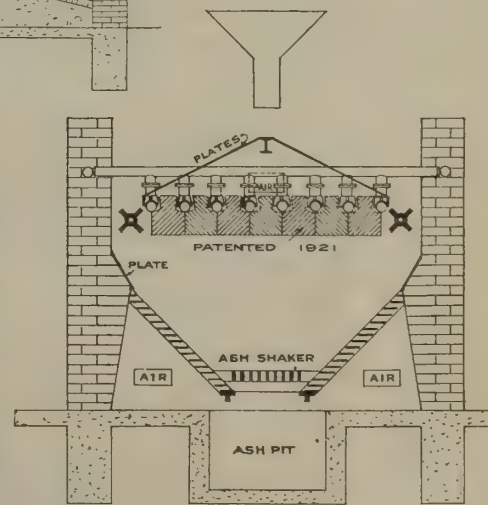

Boiler Door Arches and  
Jambs

### BOILER AND FURNACE EFFICIENCY

Knox Bros. Ltd., who are specialists in British Columbia forest products, and handle the very best, in and from, the West, have decided that the best equipments for handling their products economically (is none too good) for their first unit of their new re-inforced Concrete Mill which they are erecting on the Bickerdike Pier, Montreal, Que.

With boiler and furnace efficiency in view, and lowest maintenance cost being a factor as well, they have awarded the contract for the Boiler Brick Setting and the supplying of three Gates Engineering Co. Ltd.'s. special Dutch Ovens with incline grates, and Flat Arch Suspension Harness of the Air Cooled type, for taking care of all their mill refuse. This type of furnace will burn economically, tan bark, hog fuel, and sawdust efficiently, with up to 60% moisture content and 150% to 200% Boiler Rating.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

## Mr. McLean and The Bathurst Company—

## We Welcome You

In the Canadian lumber industry there are a few names that stand out with considerable prominence.

Among them is that of Angus McLean, head of The Bathurst Company, of Bathurst, N.B. Mr. McLean has for many years been identified with the industry in the Maritimes and has always been one of the leaders in every movement to elevate the standards and promote the interests of one of Canada's greatest industries.

This year he is rendering further service by having accepted the presidency of the Canadian Lumbermen's Association.

The Bathurst Company has in recent years sold the bulk of its product in either the British or the United States market, its Canadian business being a very small percentage of the total volume.

This important company commenced with the March 15 issue of "CANADA LUMBERMAN" a contract for the use of full page space, and, in sending this contract Mr. McLean gave two of his reasons for the decision to have The Bathurst

No doubt there are other lumber firms the heads of which feel the same as Mr. McLean.

We will gladly welcome such firms to the advertising pages of "CANADA LUMBERMAN". They will find us ready to give co-operation in full measure. It is on this basis that "CANADA LUMBERMAN" has won the respect of the biggest and best in the industry.

Company's advertising appear regularly in this paper.

He said:-

"We feel that your journal is worthy of the support of the lumbermen", and referring to some information we had given as to the steadily increasing circulation of Canada Lumberman in the U.S. and Great Britain, he added:-

"We are glad to get your letter advising that you are getting a better circulation for your magazine in the United States, and that you now reach a large number of buyers there. This is all very interesting information, and it certainly will be good for the Canadian lumbermen if their advertisements go prominently before the American buyers, as that is where most of the lumber, at least from the Maritime Provinces, has now to find a market."

Linn Logging Tractor operated by T. S. Woollings & Co. Limited, of Englehart, Ont. Average train composed of ten, twenty-foot rack sleds—containing seventy cords of wood on sleds and four cords on tractor

# THE LINN LOGGING TRACTOR

T. S. Woollings & Co. Limited, commenced operation with their Linn Logging Tractor in the middle of January. Their haul was over 7 miles in length and six miles of this haul was over an up-grade of from 5% to 7½%.

They moved eight thousand cords of four-foot pulpwood over the above described haul in 55 days, and at a gross cost of 51½ cents per cord.

Last year—on the same operation—hauling with horses, their haulage cost was \$1.75 per cord—plus the cost of keeping the horses during the summer months.

They went through their entire haul without any mechanical adjustments whatever, and previous to entering their service their operator had no experience in operating a Linn Logging Tractor.

This is the third of a series of photographs of Linn Logging Tractors in operation by Loggers in Ontario and Quebec. The next will appear in the May 15th issue.

Our claims for Linn Logging Tractor capacity and reliability have, in every case, been far exceeded by their performance in the hands of their owners.

# SIMONDS

## CROSS-CUT SAW FILES

When you use this special saw file you will find the satisfaction and economy for which you have sought. The Simonds Cross-Cut Saw File will give you 16 per cent more wear on cross-cut saw work than can be obtained by using regular tapered mill files.

It is also most efficient for sharpening Circular Saws.

You can get this file in 6, 7, 8 and 10 inch lengths.

Order from our nearest branch or secure them from your Hardware or Supply Dealer.

## Lumberman Has Gone Far in Retail Line

*K. J. Shirton, President of the Ontario Retail Lumber Dealers' Association, is Ardent Advocate of Organization and Recently Has Carried Out Improvements to His Premises—Commodious New Office and Spacious Dressed Lumber Shed are Latest Additions—How He Keeps Collections up to Date and Views the Business Outlook in His District*

The new president of the Ontario Retail Lumber Dealers' Association is Kirvan J. Shirton, of Dunnville, Ont. He has gone far in the lumber game and built up one of the most successful businesses in the south-western part of the province. One of his friends stated the other day the reason he had been able to travel so far, was that he is a man of honor and integrity and never belies his name. In other words, he keeps his "shirt on," which colloquial expression can be interpreted as being calm and collected at all times. Ever since the inception of the Ontario Lumber Dealers' Association over five years ago, Mr. Shirton has been an active member. He was one of the organizers of the Niagara Peninsular branch and was its first president. Not only has he done much personally to further the interest and welfare of the O.R.L.D.A., but he has given freely of his time in enlisting new members and generally making his influence felt. Recently he retired from the Mayor's chair in Dunnville after serving two years. He was strongly urged to continue in the position but business interests compelled his withdrawal from municipal activities.

It will be remembered that Mr. Shirton erected last fall a new storage shed for the end piling of lumber. The shed is 55 feet wide, 63 feet long and 18 feet high to the eaves. The structure will hold about 150,000 feet of material. Rough lumber for milling is piled on the side of the building which is nearest to the factory, and dressed material on the other. The walls of the building are sheeted and covered with corrugated iron. The frame was constructed in bents on the ground and then raised similar to the method pursued in building a timbered barn. There are two driveways through the structure, each 10 feet wide, and one cross driveway 12 feet wide. The head of the firm states that they have found the dressed lumber shed to be a great convenience, enabling them to carry a larger stock of lumber ready for customers and also keeping a close check on all quantities of dressed material. The size of the bins range from 8 x 8, 8 x 10, 8 x 12 to 10 x 12.

### How the Business Has Grown

Mr. Shirton has gone one step further now and has erected an attractive office building, a plan of which is shown in this article. He states that the plan, which was followed in erecting the new office, was to make it convenient and commodious and to

obtain as much north light as possible and still conform to certain existing conditions. The door marked on the plan "door to mill" could not be changed without interfering materially with the arrangement of the plant. In order to take still further advantage of the light from the north and leave the door as at present, it was found necessary to resort to the use of a hall. The necessity for the construction of this passageway made it possible for an ideal location of a wash room at one end. The weigh scale, marked on the plan, is a convenient arrangement, the platform being about two feet from the west wall and a window on

that its significance will be recognized by all office workers, particularly when, according to the latest climatic record, Canada has been having about six months of winter weather.

In regard to the other features in the office such as stoves, cabinets, etc. Mr. Shirton says that these are largely matters of individual taste, and adds that if the accompanying plan and description prove of any benefit to anyone thinking of constructing an office, he will consider himself amply repaid for any information given to his friends through the "Canada Lumberman."

It may be stated here that William

K. J. Shirton, Dunnville, Ont., President of the Ontario Retail Lumber Dealers' Association, at work in his new private office

either side, allowing a good view of the vehicle or load being weighed and still making it unnecessary to go out of doors.

Another feature of the office, which Mr. Shirton considers important, is that there is no possibility of a direct draft on the parties sitting at any desk. This may appear a minor matter but it was one which the firm consider quite essential and believe

Shirton Co., Limited, was founded by the late Mr. William Shirton in 1895. He conducted business until 1909, in which year he passed away. A partnership was then formed in the family and carried on as such until 1915 when a change was made to a joint stock company under the present name of William Shirton Co., Limited. For several years natural gas was used for motive

power, but as this is becoming exhausted in the Dunnville district, the company now use Hydro-electric power. Natural gas, however, is very economical, more so than electricity or steam, providing its continuity and abundance are assured.

#### Too High Prices May Stop Building

One feature of the business of the company is in connection with its cross arms department, which has developed into quite a wide line. In the making of cross arms, B. C. fir is employed as this wood is believed to be the most desirable from every point of view. The dimensions generally in use are 3" x 4" finish, while the lengths of the cross arms vary from 4 to 10 feet. The cross arm business has not been up to normal of late but the backward season has, no doubt, had something to do with this. A number of mills in the West are now making these arms, which are also turned out by other firms in Quebec and Ontario, and so the demand in Canada from telegraph, telephone and other companies is pretty well taken

and many prospective builders immediately went on strike.

"However," added Mr. Shirton, "things may look up a bit as soon as the weather gets settled and the sun shines on both sides of the fence. We believe there will be a certain amount of building, of course, but nevertheless are of the opinion that the recent rise in prices will change what looked at first to be a really record year, into one of merely normal activity. We do not want to be classed as a pessimist, but are stating the facts as we see them. In other towns and the larger centres things may be booming, but, unfortunately, we cannot say the same for Dunnville and vicinity. We have personal knowledge that other communities have felt and will feel this season the result of the unwarranted advance in building supplies."

Mr. Shirton believes that a contributing agency toward the success of his business has been not only in prompt service, well-selected stock, honest values and an honor-

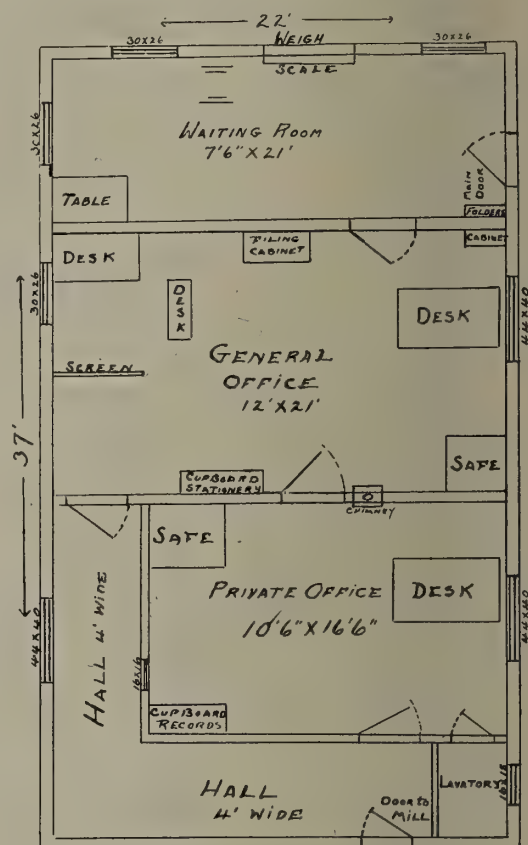

count and it was necessary to avoid this class.

Many good people were sometimes slow in settling. They simply put the matter off in a thoughtless way. Mr. Shirton said that, after rendering the account he felt that a good plan was to make a personal appeal to such parties, explaining that it requires a large amount of capital in the lumber line to carry a complete stock and that it is essential to have money, or something equally negotiable, in the way of security to finance a retail business. He found that this method of appealing to such persons was successful and they saw the reasonableness of the plea.

Often a customer would say that he could not pay just then, but that he was expecting money at such and such a time and then he would settle. Mr. Shirton said that he frequently requested a cheque dated about the time that the customer expected to get in the cash, and if there was still hesitancy on the part of the debtor, he would ask that the cheque be given and post-dated

The new office of the William Shirton Co., Dunnville, Ont. At the right the interior arrangement of the new office is seen, indicating a compact and convenient lay-out

care of. It has not been possible to work up an export trade as the high cost of transportation prevents any large business being developed.

In regard to general business conditions, Mr. Shirton says that a few months ago he was quite optimistic but since then has somewhat changed his views. The slight advance in some lines of lumber and the marked advance in others, together with a general rise in the prices of other materials, (excepting cement, which, however, will probably follow), and the demand of labor for more money, has had the effect of stopping the erection of a considerable number of residences in Dunnville and vicinity. In conversation with the "Canada Lumberman," the president of the Ontario Retail Lumber Dealers' Association declared that at the beginning of the year things never looked better in his district, and his firm were kept busy estimating. After the prospects got their figures (or those of competitors) for lumber and also learned what the carpenters, plumbers, masons and hardware men's quotations were, and then added all together, they were surprised at the aggregate

able record, but also in keeping accounts well collected. At the annual convention in Ottawa in 1922 he spoke strongly on this subject, and it is not inappropriate to reproduce here his remarks on that occasion on "collection of accounts." He said that while many dealers had signs in their offices stating that their terms were Cash, he felt sure that he was safe in saying that not ten per cent of them found it feasible to adhere to this regulation, particularly in regard to contractors and farmers who were reputable in every way but still wanted to buy on time or pay for their material in the fall. The outcome, however, was that when a business was not all cash, that credit crept in and the dealer was up against the problem of discriminating between the good and the bad. If the yardman was not very careful he would get some accounts on his books that could not be collected.

All accounts required a close study of local conditions and could be divided into three classes,—good, slow (or doubtful), and bad. There was, strictly speaking, no proper use of the term "bad" for frequently no possibility existed of collecting a bad ac-

say fifteen days. Rarely did he come back without a settlement in the way of a cheque or an interest-bearing note which could be negotiated in the bank and was a confirmation or substantiation of the account. When this was obtained there could be no room for dispute.

If slow accounts were not looked after they were apt to get down to the doubtful class. In the latter case it was advisable to get, if possible, a lien on the building, but if the time for placing a lien on it had expired, the next best move was to search the registry office and see if the customer had any property. Often collections could be made by getting a judgment against the party who was lagging too long in settling for what he owed.

Mr. Shirton asserted that every retail yardman should watch collections carefully during these trying days. He had outlined only roughly the methods in use in small towns and much that had been said by him might not apply to lumber merchants in cities who had their own special system of dealing with these matters and getting in payment promptly for all materials sold.

# Business and Amusement at Regular Session

*Wholesale Lumbermen Entertained by Breezy Addresses, Magic, Mind Reading and Other Features. Big Picnic will be Held at End of June.—Orders are Many*

Varied in character and entertaining in its features was the regular monthly meeting of the Wholesale Lumber Dealers' Association, Inc., which was held at the Albany Club, Toronto, Friday April 20th. There was a good attendance and after the regular business was disposed of, several interesting addresses were delivered.

A couple of amendments to the constitution were passed, one to the effect that each of the standing committees of the Association should consist of three members, the first-named member as chairman and that the Entertainment Committee should be increased from three to five members. Another amendment concerned the Bureau of Information reports and dealt with the advisability of getting after those who are dilatory or indifferent in regard to sending in their monthly returns.

A. E. Eckardt said the Bank Act was now under revision at Ottawa and he thought some of its provisions might well be amended. He believed that certain banks occasionally urged customers to buy more than they should, and then when the opportune time arrived, closed down on them. He did not say that this was a general practice but instances could be furnished where lumbermen had lost money through such a proceeding. Mr. Eckardt moved, seconded by Mr. Lovering, the following motion which was referred to the Committee on Legislation with full power to act immediately: Be it resolved that the officers of the Association be and they are hereby instructed to memorialize the Honourable, the Minister of Finance, that in the opinion of this Association in the pending revision of the Bank Act provision should be made for either of the following matters, namely:

- (a) That securities under Section 88 of the Bank Act be registered in the manner in which chattel mortgages are now recorded in the several provinces, or
- (b) That any person stating in writing to any bank that he has been requested to supply goods on credit to any customer of the bank shall be entitled to information from such bank as to the securities given by such customer to the bank under Section 88 and the amount of the debt in respect of which the bank hold such securities.

## When is an Order Not an Order?

A. C. Manbert said there were plenty of orders nowadays for lumber and sales were being made fast. He thought that some attention might be given to the subject and also to a consideration of when an order was not an order. In this connection Mr. Manbert submitted the following which sets forth interesting facts:—

"Talking about orders. Henry Funginger, Treasurer of an Eastern paper house, puts over the query, 'When is an order not an order?' and answers it as follows:—

An 'At Once' order where there is a large past due account, is not an order—it is an embarrassment.

An order for \$1,000 from one who is not entitled to credit in excess of \$200 is not an order—it is a grievance.

An order for a new account without full references is not an order—it is a clog in the wheels and a possible source of bitterness.

An order that is not plainly or correctly written is not an order—it is an aggravation.

An order that does not show every special condition entered into between the salesman and the customer is not an order—it is a breeder of misunderstanding and dissention."

## Mr. Bigwood Speaks on Kiwanis

The Lumbermen's Association are seeking to develop speakers within their own body and to this end a beginning has been made. F. H. Bigwood, president of the Kiwanis Club, Toronto, delivered a short address on "Analysis of Policies and Methods," with special reference to the work and worth of Kiwanis Clubs. Mr. Bigwood said that during the year just closed business men had to analyze policies and methods closer than ever before, and it was a tribute to their foresight that business to-day is upon a fairly sound basis. Dur-

ing the war years and since there had been great activity or a tendency for business men to get together for various purposes. Clubs and associations had sprung up here and there but some had fallen by the wayside owing to the stress of the last three years. Mr. Bigwood then made reference to the Kiwanis Club and its remarkable development during the past eight years. He said the organization was composed of unselfish, high-minded and practical business men and had attracted to its membership the outstanding men of every community where it had gone. There are now close to 1,000 clubs with a membership of 100,000. The motto of the Kiwanis Club is "We Build." Mr. Bigwood dwelt in detail upon the object and spirit of the club, its mission and achievements and what had been done in Toronto during the Yuletide and other seasons for under-privileged children, orphans, the afflicted and the unfortunate, the fire sufferers in Northern Ontario, etc. He concluded by saying that Kiwanis is transforming the indifferent Canadian and American business men into workers and thinkers along lines of civic betterment and national improvement.

Mr. Bigwood's talk was followed by a clever exhibition of sleight-of-hand tricks by Thomas Bowyer, secretary to H. Boulton. This feature was well received, and later in conjunction with L. D. Barclay, chairman of the Entertainment Committee, an exhibition of mind-reading was staged which startled the members by its remarkable penetration, accuracy and concentration. Messrs. Barclay and Bowyer seemed to be able to read the inmost thoughts of every man in attendance and reveal the past, present and future.

## Early Days of the Yukon

A. L. Eastcott, of the Pembroke Lumber Co., Pembroke, who was a guest during the evening, gave a short address. He stated that what we often regarded as our difficulties were really our opportunities. If we meet these difficulties and overcome them we advance and are thus able to achieve higher and better things. This is the age of progress, and opportunities presented themselves on every hand if they were only taken advantage of. The great game of golf was full of difficulties and hazards and by reason of this was one of the most attractive pastimes of the day.

Hon. Justice Craig, who for thirteen years administered justice in the Yukon in the early days when the gold fever was at its highest and the country was visited by all nationalities in the world, gave a vivid and graphic description of the scenes from 1900 on until Dawson City was transferred from a wild, reckless, riotous mining camp into a law abiding, peaceful community. Judge Craig paid a high tribute to the efficiency and faithfulness of the Northwest Mounted Police and told of the rise and downfall of many claimants and searchers after the yellow metal. When Mr. Justice Craig arrived in the Yukon in 1900 his first dinner cost him \$11 and a mere shake-down where he slept separated him from another \$5. Everything was exceptionally high in price and turkeys as much as \$32 a piece. 154 cases consisting mainly of cases of jumping claims, trespassing and water rights, were awaiting trial when he reached Dawson. The speaker gave a number of interesting personal observations on the administration of justice, the maddened search for gold, the recklessness of those who secured pay-dirt, the enforcement of law and order, the social life and other features. At the close a hearty vote of thanks was tendered the speaker by A. C. Manbert and W. J. Lovering.

It was announced by the Entertainment Committee that arrangements were being made for a picnic which will take place the latter part of June. It is probable that the rendezvous will be the Lake Shore Country Club where a most delightful outing was held by the members a year ago.

Receipts at the Crown Timber office, New Westminster, for the fiscal year ending March 31st were \$175,384.44, the highest figure in the history of the office, being over \$25,000 more than previous high record of 1922 when the exchequer was enriched to the amount of \$149,546.51.

# Statistical Story of Lumber Production in Canada

By R. G. Lewis, Ottawa

"The cut of lumber in Canada during 1921 was considerably less than it has been any year since 1908 when accurate annual statistics of the lumber industry were first collected," says the Dominion Bureau of Statistics, Ottawa. "During 1921 only 2,869,307 feet, b.m., of lumber, valued at \$82,448,585 was reported. This is a decrease in quantity of one-third of the production of 1920. The average value of lumber at the mill decreased by over \$10 per M, causing a drop in the total value of lumber sawn of \$85,723,402, or over 50 per cent."

These figures are supplied in reference to the lumber industry by R. G. Lewis, B.Sc.F., who is in charge of the forest products statistics.

The number of mills reporting in 1921 was 3,126, a reduction of over ten per cent from 1920 and not only were there fewer mills in operation in 1921 but the average number of days each mill was in operation during the year was only 82½ out of a possible 304 working days as compared to 96 for 1920. This resulted in an average production per mill for the Dominion of only 918 thousand feet while the average in 1920 was 1,235 thousand feet.

The total number of employees on salaries and wages in the sawmills in 1921 was 30,337 as compared to 41,158 in 1920. The total payroll in 1921 was \$26,707,689, a reduction of over forty per cent from 1920. The average rates of pay for all classes of employment in this industry were considerably less than in 1920. Other agencies of production in the sawmills such as fuel used, power employed and miscellaneous expenses incurred, all showed reductions from 1920 to 1921.

In spite of the reduced production of sawn lumber this group of mills reported increases in the quantities of lath and shingles produced amounting to over five per cent in the case of lath and over four per cent in the case of shingles. These increases in quantity, were, however, accompanied by decreases in average value, causing decreases in the total values of lath and shingles produced. The figures for 1921 are, lath 804,449 thousands valued at \$4,188,121 and shingles 2,986,580 thousands valued at \$10,729,096. Other miscellaneous by-products of the sawmills show a general increase in total value especially in the cases of slack cooperage stock, sawn ties, poles, posts, mine timbers and piling. Decreases were reported in connection with veneer, tight cooperage stock and dressed lumber.

The total value of all classes of products for 1921 was \$116,896,559 as compared to \$207,163,577 for 1920.

The following table shows the production of lumber in Canada by provinces for 1920 and 1921:

	Quality		Value	
	1921	1920	1920	1921
CANADA	4,298,804	2,869,307	168,171,987	82,448,585
British Columbia	1,443,270	996,266	54,394,069	24,867,321
Ontario	992,901	734,054	43,142,377	24,518,164
Quebec	916,422	649,334	37,128,201	19,656,462
New Brunswick	515,785	269,983	18,374,126	7,810,622
Nova Scotia	270,166	115,246	9,275,934	3,054,995
Manitoba	58,419	61,727	2,058,590	1,398,067
Alberta	41,229	26,002	1,480,186	711,149
Saskatchewan	54,371	10,892	2,074,621	273,093
Prince Edward Island	6,241	5,803	243,883	158,712

## Why Export of Canadian Pulpwood Should Stop

By W. F. V. Atkinson

The labor required to manufacture our wood is the very bread of our citizens. Since the war many are still seeking employment. When our wood is exported it is lost, fails to maintain existing industries or supply new ones. With it goes the means to buy food, fuel and the necessities of life. The payroll is over one-third the cost of newsprint.

The unmanufactured wood exported is almost entirely pulpwood. Sawlogs are sometimes exported and other forest products might also be mentioned, even Christmas trees, but they are not important. Under a general law prohibiting the export of raw forest material these, as well as any pulpwood that could not be used here, might, if necessary, be exported under special permits.

The Parliament of Canada alone can regulate exports. Provincial Legislatures controlling their own natural resources grant no cutting rights on public lands without stipulating the manufacture in Canada of all wood cut. Thus the pulpwood exported is cut only on private lands.

It is sometimes claimed that legislation preventing the export of pulpwood would be an infringement of private rights and that it would injure the settler clearing land for farming. To satisfy these claims Canadian mills would most likely contract for a large part of each year's requirements from this source if the price delivered were not more than the cost of the wood cut on their own limits. Crown dues, rents and all proper charges, such as sinking fund, or replacement value of standing timber, to be included. Prices and quantities could be adjusted yearly through some Government official representing the freehold wood producers within a logical freight radius of each mill. Exemptions from sales tax would help.

Pulpwood exports average over one million cords annually. Canadian mills are now able to absorb more than this quantity. New mill building and extensions are making this readjustment easier.

The census of industry shows that during three years wages and salaries paid to convert pulpwood to pulp and paper averaged fourteen dollars per cord. During the same period three and two-thirds million cords were exported and Canadian payrolls lost fifty-one million dollars. Within the last seven years one hundred and ten million dollars were thus lost to our workers.

Let us glance at the heavy loss to the industry and to the country as a whole caused by the export of all this wood. For example the figures show that had the wood exported in 1921 alone been manufactured here its sale value would have been increased by fifty-seven and one-half million dollars.

Various official estimates of the pulpwood resources of Canada have been published. More accurate information is now being obtained. Recent figures show less than half of former estimates.

In some districts mills will be out of wood in a few years. Large northern areas of scattered timber must remain commercially inaccessible. The end is dangerously near. The annual cut averages now four million cords. This is only a part of the annual depletion. Fires, grubs, beetles, fungi and winds have admittedly destroyed twice as much as was cut since 1920.

The end of our pulpwood means the end of present methods of paper making. This industry now employs over thirty-five thousand operators, not including the host of men who cut and bring the wood to the mills. Both classes support many dependents.

All these facts speak for themselves. More could be said. The above is surely a sufficient argument to warrant the immediate prohibition of unmanufactured wood.

### Everything Depends on the Forests

When a man writes his name, reads his paper, puts on his shirt, his near-silk socks, his necktie, his shoes, his black suit, when he smokes his pipe, when he takes aspirin or quinine or when he takes acetanilid for a headache, when he goes hunting or to the movies, when he plays a phonographic record, when he uses his radiophone, when he paints his house, varnishes his floor, lights his fire, eats his sausages, he comes into contact directly or indirectly with the chemical utilization of the forest. The chemistry of the forest, the chemical utilization of wood, whether we know it or not, is part and parcel of our daily existence. The discovery of new uses for wood is keeping ahead of the discovery of substitutes for wood, which explains the necessity of governments and all forest authorities adopting a policy that will provide for the scientific handling of this great and rapidly diminishing natural resource.

One hundred and forty thousand Canadian boys have been organized by the Canadian Forestry Association into a Young Canadians' Forest League and will be on the alert this year to prevent forest fires in all parts of the Dominion. Badges and detailed instructions are being supplied and the entire body will act as an auxiliary force to the fire rangers when occasion offers.

The Hawkesbury Lumber Co., of Ottawa, will have a busy season. It is understood that they will operate their sawmill at Hawkesbury night and day, and have leased the mill of the Gatineau Company at Rockland, Ont., which they will also run to capacity. It is learned that the Gatineau Company will put the Gilmour & Hughson mill at Hull in commission again during the present season.

SECOND FLOOR PLAN

## A Fine Type of Home

Simplicity of detail and economy of space are the characteristics of the house pictured on this page. In a day of disproportionate shapes and poorly realized outlines the soundness and beauty of such a house commends it immediately to the man of moderate means who is seeking the realities as well as the appearances of a home. According to estimates of the Home Owners' Service Institute this house may be erected for between \$7,000 and \$10,000.

An outstanding advantage of this house is the fact of its being square which means, of course, that it is the most economical, other things being equal. It is twenty-six feet square, two full stories high and contains six livable rooms, well arranged, well lighted and well ventilated. The exterior of shingles laid with a wide exposure make it possible to gain a very pleasing effect in painting. White, perhaps, with green blinds will show off the house handsomely.

The house was designed by Whitman S. Wick of Middletown, N.Y., and complete plans therefor may be obtained upon application to the Home Owners' Service Institute, No. 37 West 39th Street, New York, N.Y. It may be built on a forty foot lot facing any direction except west.

The arrangement of the house is such that upon entering the hall from the veranda, which with simple colonial columns extends all the way across the front, an open stairway leading to the second floor is found at the right. To the left of the hall is a living room containing a fireplace and beautiful colonial mantel. This room is lighted from two sides by three large windows and has ample wall space for the placing of furniture.

The dining room beyond, connects directly with the kitchen. A pantry with built-in case and counter and a rear porch opens from the kitchen and makes the whole relationship of these units of the house thoroughly convenient for the house-wife. Another commendable convenience is a grade entrance at the side of the house which connects with the cellar stairs.

### Outline of Specifications

The second floor has three bed-rooms each thoroughly well ventilated. A large closet opens from each bed room. The bath room has all three toilet fixtures and a built-in medicine cabinet with a mirror over the wash bowl. A closet for linens containing shelves and drawers is built into a recess in the hall.

The house has a large attic reached by stairs from one of the bed-rooms and the cellar contains heater and coal bins

and may be divided off for laundry, storage rooms and the like if desired. One chimney contains all flues.

**Masonry:** All footings shall be of concrete as shown on the drawings and shall be at least eight inches thick and eight inches wider than the wall or pier starting thereon. Where shown on the drawings the walls and piers are to be built of concrete. Foundation walls, where showing above grade, are to be faced with four inches of an approved red tapestry face brick.

**Carpentry:** All framing timber shall be of white pine, spruce or hemlock. All floors shall be joist construction, with timbers of sizes and spacing as marked on the plans. Exterior trim of white pine, stock designs.

Cover the exterior walls of first and second story with 1 x 8 inches No. 2 common shiplap. All exterior material for cornice, overhang, etc., is to be of white pine.

Cover main and porch roof with 18-inch shingles spaced 5½ inches to weather on main roof and 4½ inches to weather on porch roof. Sidewalls to be covered with 18-inch shingles spaced 8 inches to weather, or with wide board siding, at option of owner.

Interior trim as desired. Double floors, with finish flooring selected by owner.

**Lathing and Plastering:** Walls and ceilings above basement to be plastered two coats and a smooth white finish.

**Painting:** Strictly pure white lead, zinc and linseed oil in proper proportions shall form the basis of all paints unless otherwise specified. All exterior work except shingles and ceiling are to be painted two good coats of paint, color as directed by owner. Shingles and sidewalls and roof to be given one coat of shingle stain. Ceiling of porches are to have two coats of spar varnish.

All interior woodwork throughout first and second floors is to have one coat of chestnut stain and two coats of varnish. Oak floors to be filled and varnished, yellow pine floors to have one coat of oil.

**Electric Work:** Wire for lights, base plugs and switches and all openings as per plans. Equipment to meet approval of the Underwriters Association, subject to the local board of inspection.

**Plumbing and Gasfitting:** Complete sanitary and rain-water drainage system, with hot and cold water supply; brass piping for the hot water system. Fixtures as shown on drawings and listed on specifications to include two compartment laundry trays in basement, bathtub, lavatory, water closet, sink and built-in bathroom accessories.

**Heating:** Steam heating system specified, but heating plant at option of owner.

## Big Publicity Plans for B. C. Shingles

### Extensive Advertising Will be Done to Focus Wide Attention on "Edg-Grain Columbia Inspected"

The Shingle Manufacturers' Association of British Columbia has decided to make their product more widely known and increase its prestige and popularity by an extensive advertising campaign. The propaganda for "Edg-Grain British Columbia Inspected" shingles will be a comprehensive one, national in character but specific in detail. The object is to acquaint the public more thoroughly with the qualities of high-grade red cedar shingles and to drive home to retailers, builders and architects the merits of a roof covering, which the producers believe, they have been too backward in proclaiming. There is not much wisdom in having a worth-while article unless the world is informed of the fact.

Every lumber retailer, builder, architect and home owner is, of course, familiar with the protective features of shingles and has knowledge—more or less vague perhaps—regarding British Columbia shingles, but no concerted, co-operative effort has been made by the manufacturers in that province to focus attention upon "Edg-Grain Columbia Inspected."

This is the new trade-mark which has been adopted and the shingle men of the Pacific Coast recognize that they have been making the mistake of advertising the wooden shingle irrespective of its quality. They have awakened up to the fact that there are shingles and shingles, and are of the opinion that, by the new policy adopted, they will succeed in establishing that the edge-grain mark on a British Columbia wooden shingle is equal to the hall mark on a piece of silver.

The Shingle Manufacturers' Association of British Columbia announces that the use of the trade-mark will not be permitted on any shingle that is not up to the high standard set by the Association, and declare there will be no exception whatever to this rule. The distinctive trade-mark will protect the consumer and supply the retail dealer with an article bearing the endorsement of the combined industry producing it.

To educate the customer and not influence legislation is the object of the campaign which is being launched at an opportune time—just when spring construction work is under way. Illustrated and instructive display advertisements will appear in leading trade journals and national magazines. The publicity plan will be followed up by the issue of attractive literature, giving the history of the B.C. red cedar shingle from the tree to the roof and explaining how it can be laid to the best advantage. Booklets of this character broadcast everywhere should prove useful both as a manual and valuable as a work of reference.

J. A. Edgecumbe, president of the B.C. Shingle Manufacturers' Association, and Fred H. Lamar, secretary-manager, state that the present publicity effort is not a spasmodic one but is the groundwork for a continuous campaign to establish in the public mind the real facts concerning "Edg-Grain British Columbia Inspected" shingles.

There has been a generous response from the industry throughout British Columbia and we understand practically all producers are getting behind the publicity project, which, it is believed, will do much to stabilize production and create wider demand and greater appreciation of the "Edg-Grain British Columbia Inspected" shingles.

### Sues Shareholders for Company Debt

In a judgment in the Superior Court at Montreal recently Mr. Justice MacLennan dismissed the action of Joseph Drouin against Joseph Lefebvre for recovery of \$3,000 which plaintiff claimed as balance due him on the sale of timber limits to the Compagnie Boune Bay, Limitee, by the defendant, who was said to be a member of company mis-en-cause. Defendant inscribed in law alleging that he could not be held responsible for the company, and it was on this point that the court dismissed the action.

Plaintiff said that on February 19, 1913, the defendant subscribed \$5,000 to the capital stock of the company, whose aim was to purchase from the plaintiff certain timber limits for the sum of \$225,000. This subscription was payable—ten per cent. cash, ten per cent on April 1, 1913 and ten per cent every two months afterwards. The defendant made the first cash payment, and paid the second installment. On May 30, 1913, the organization of the company was completed and plaintiff transferred certain timber limits to the company. It was agreed that he was to keep all the subscriptions already received, including \$1,000 paid by the defendant. It was also stipulated that he was to receive further subscriptions as they matured, including those to be made by the defendant. The defendant made two

more payments and then stopped, leaving a balance due of \$3,000. Plaintiff said the company refused to claim this sum from the defendant. Hence the present action.

Defendant submitted in his inscription-in-law that, in virtue of section 39 of the Federal Companies' Act under which the company was incorporated, he, as a shareholder of the company, could not be held responsible for the debt of the company.

Mr. Justice MacLennan, in giving judgment, said the plaintiff sued the defendant as a debtor of the company mis-en-cause, and did not allege that he had obtained judgment against the company. A writ of execution of such a judgment was produced, with a statement that the plaintiff was not satisfied. But the federal law under which the company mis-en-cause was incorporated prohibited the defendant as shareholder from being sued for payment of his shares by a creditor of the company. Under the circumstances, the court held that there was no lien de droit between plaintiff and defendant to justify the present action. Therefore, defendant's inscription-in-law was maintained and the action dismissed.

### Mr. Booth Speaks Strongly on Fire Hazards

In a recent interview, J. R. Booth, of Ottawa, veteran lumberman and paper manufacturer, said that he did not find that over 15 per cent of operating lumbermen were able to make a profit covering a long period of years. Several big lumbering concerns in the Ottawa district he knew had retired from the field either with no gains at all or with the loss of several hundred thousand dollars.

"And yet, the public mind," Mr. Booth continued, "is stuffed with false notions that because a man is in the lumber business with a government limit, he has taken an unfair advantage of his fellow men and is a fit target for punishment. I do not think that the public is prejudiced against lumbermen, as individuals, but they do feel some bitterness toward men who are dealing in the leased property of the state. They are ready to exclaim: 'That man has established a big industry on public-owned timber lands,' forgetting that for every dollar the lumberman takes out for himself, the workers, the merchants, the railroads, the public treasury, all take many dollars."

Mr. Booth added that for every dollar's worth of lumber cut, many dollars worth were burned and that only a shortage of forest products, accompanied by high prices, will make the public realize the urgency for stamping out forest fires. He stated that the proportion of trees of timber size that had been taken out by the axe as compared with those destroyed by fire was one in twenty. With the large limit holdings, if fire could be eliminated Canada would have a self-perpetuating forest supply. The nation has been forced to the edge of a timber dilemma, not by the lumbermen, but by forest fires.

The veteran Canadian captain of industry who is now in his 97th year, added that the consumer of forest products would have to pay for the terrible loss created annually by conflagrations which would also result in increasing the price of paper. The prices of all forest products were bound to ascend and nothing could stop them.

Mr. Booth spoke of some old documents he had been rummaging through. One of them referred to lumber sales seventy-five years ago when the price of sawn white pine was just twelve and thirteen dollars a thousand feet. The price for the same grade in 1923 is close to eighty dollars a thousand feet.

"I can see no other remedy for the ever-increasing ruin of the forest resources of the country," observed Mr. Booth, "except to let the people bring themselves to such a tragic condition of scarce timber and pulpwood with extreme costs for every foot of cord they buy that some drastic cure will be sought and applied. Forest conservation will arrive when the absence of it pinches our population hard enough."

### Will Take Cotton Out of Cottonwood

The cotton of the cottonwood, the popular shade trees of many cities, need be no longer a drawback to the tree's utility, according to W. H. Long, of the New Hampshire station of the U.S. bureau of plant industry, who has developed a spraying treatment which will prevent the growth of the cotton-bearing blossoms without injury to the tree. The same treatment may be given trees of allied species which blossom before the leaves come out.

It consists of spraying the blossoms as soon as they open in the spring with a very dilute solution of sulphuric acid, preferably of a strength of two per cent. This kills the blossoms which later in the season would otherwise produce the tufts of soft, downy cotton that strew the streets and fill the air along streets planted with cottonwoods to the annoyance of the property owners.

# Add Regular Draying Charge to Every Load

*Levy for Delivering Lumber Should be Made According to Distance and Condition of Road over Which it is Necessary to Travel — Cartage Problem*

The problem of delivery has always been a perplexing one with the average retail lumberman. Should he charge for the service of taking building material to the place where it is to be used, or should the conveyance of the same be included in the price of the produce? There are many differences of opinion, varying according to the locality, the nature and extent of the consignment, the relative importance of connection of the buyer and the trade custom.

In Quebec City of late years it has been a practice to make certain charges fixed upon a definite basis, and all parties who order material, know exactly what they have to pay. There is no favoritism shown and everything is set forth in clear, unmistakable terms. In other centres careful inquiries are made as to the amount of lumber that a man wants, where he desires it delivered and for what purpose it is to be used. Then if the order amounts to a respectable sum, no charge is made, but if it is a "jag" of a few boards of 2 x 4's, the price is raised from 25 up. This is included in the bill and the dealer imagines that the customer thinks that no fee is made for carting, and the total value of the whole transaction lies in the lumber, with delivery thrown in. This is a sort of a camouflage and the majority of retailers find it pays to be open and above board.

If a man desires some pine straps, spruce flooring or hemlock studding right away and cannot wait until a service wagon or truck goes in his direction, most dealers tell him frankly that he will have to pay for the special delivery. If, however, he waits until a route vehicle starts from the yard, he will not have to pay for the cartage.

## It is Constant Source of Worry

There are a few things to remember, however, that somebody is paying for that delivery, and it is interesting to publish the observations of G. C. Gilstrap, of Clafiri, Kan., who in a recent letter to the "American Lumberman," sums up the situation in a most comprehensive way. His remarks as follows are certainly worth reading:—

Delivery service has always been a source of considerable worry to lumbermen. Where it is undertaken without a direct charge to cover the cost of drayage it becomes very aggravating. Many customers will ask the dealer to send out a dime's worth of nails, a quart of paint, or a piece of moulding, and say, "Send it right away for I am in a hurry," without a thought to the fact that it causes an extra trip for the dealer, the expense of which is greater than the entire value of the goods, so that the dealer not only loses his profit on the transaction, but the goods as well. On the other hand, if he refuses to send it he incurs the displeasure of the customer, and may lose his trade entirely by such action.

What lumberman has not sent a load of lumber out to some job and after the load had arrived there, found that the workmen in charge had carelessly ordered the wrong length, making it necessary to return the whole load, or a large part of it? Or is there any dealer who has not had a carpenter order out a load of B & better flooring or finish, pick out the "better" and announce he had some left over, "So send out the truck right away and get it," and found that only B was "left over"? How many of these people offer to pay for the extra trouble and expense? Or if they are asked if they don't think they ought to pay something to cover the extra expense of the needless trips, do they say "Sure, how much is it" or do they get all "het up" and say Jones never asks us to pay for delivering, so I will buy there after this"? Do they, or don't they?

## Some One Pays for "Free" Delivery

In the first place we look at the matter in the wrong light. We are accustomed to say "free delivery" when there is no such thing as free delivery, or "free" service of any kind, for that matter. There must be a charge somewhere to cover this cost, and there are just three ways of making this charge. First, the customer who receives the benefit of the delivery may pay for it either by direct charge, or by having it included in the amount of the bill. Second, it may be added to the cost of doing business, thereby making it necessary to raise the selling price on all merchandise to all customers enough to cover this extra expense. Third, the dealer himself may pay it out of his profits.

The last of these three considerations should be eliminated without question. No dealer has a right to pay the charge himself. For, even if he can afford to do so and not go broke, he is giving a false

impression of his neighbor lumberman who can not do so. The trade will, of course think that the dealer who is delivering free is getting high enough prices, and that the one who is making a charge for the service is getting an excessive profit. Although the first dealer will probably find himself on the wrong side of the banking ledger before many years have passed away, the public will not think it was because he sold too cheaply, but just another case of bad management, while the first impression as to the other dealers remain, and to them they are profiteers still. And the misguided, dejected dealer goes on his way, wondering how he could have failed when he seemed to be making good money.

If this cost is added to the general expense and price raised on all material to cover it, then all customers are not treated alike and that is unfair to part of the trade. Particularly all building stores have some customers who come to the yard for their material while many others have their material hauled only a few blocks. These are just as good customers, yet they must pay as much as the fellow who lives in the farthest house of the longest street of the town.

## Where Should Free Zone End

Some dealers have even gone further in this delivery service and delivered five, ten and even fifteen miles in the country, with no charge. There is no dividing line as to where to stop this service. If it is all right to deliver free for one block, why not ten blocks, and if ten blocks, why not fifty? The same is true of country delivery, if one mile, why not ten miles? But why should the good customer, who does not benefit by this delivery, help pay for the benefit the one who does? Is it reasonable to suppose that these good customers will remain satisfied when they realize that they are paying for the other fellow's service? Experience does not so teach us.

If the delivery charge is added indirectly to the bill covering the particular job, it can only be done in the nature of an estimate, which is not likely to be accurate. Usually there will be extra trips for unexpected purposes which were not allowed for in the estimate, or if allowance was made for them, it is likely that some competitor failed to make such an allowance and has therefore given a lower estimate and sold the bill.

The only logical way, fair to all, is to add a regular draying charge to each load as it is taken to customer. If a large load is hauled, it should be charged for accordingly; if a small one, allowance should be made for the size of it. In like manner, charge should be made according to distance and condition of road over which it is necessary to deliver. It is usually a good policy to make the charge equal to, or almost as much as the city dray would charge for a like service, and in any case it should be enough to cover the cost of the service, including upkeep and interest, as well as the actual operating expense. Any dealer adopting this plan will find that most of his delivery worries have been overcome; that he seldom has to make long trips with small loads; that he will have only about one-half as much returned material to bring back from the completed job, and that his customers are better satisfied than under the old haphazard system.

## Your Competitors Are Worrying, Too

Let no dealer say he can't charge for delivery because his competitors will not do it. If he will investigate a little, he will find that they have been having just as much grief over the old method of free delivery as he has had, and if he can convince them that he will always charge a reasonable amount for delivery they will be glad to join him on it. Let him see them, get them together and talk over the situation. In nine cases out of ten he will find them ready and anxious to join in the movement. Then while talking over the matter, make out a schedule of charges and let all adhere to this schedule. It is well to announce in the local paper that after a certain date all deliveries will be charged for at the schedule adopted, and all dealers sign it. It is also well to give a few of the principal reasons why it is better and fairer to all to make direct charges for delivery service.

And when the dealer has secured the adoption of this system in his town, let him go home and take a good night's sleep, for he will have removed one of the most aggravating worries of the lumberman, and he will never go back to the so-called free delivery system.

## Lumberman Who is Coming to Front

W. Norman Fox, Toronto

W. Norman Fox, who was elected a director and secretary-treasurer of the firm of Edward Clark & Sons, Limited, Toronto, at the recent annual meeting, is one of the progressive young lumbermen who in a comparatively short time has made rapid progress. Mr. Fox takes a warm interest in all affairs connected with the lumber industry and was recently made chairman of the Membership Committee of the Wholesale Lumber Dealers' Association, Inc. He is also associated with the Rotary Club and other organizations. A Toronto boy, the son of J. W. Fox, he was educated at the Parkdale Collegiate Institute, and later entered the accounting department of the C.P.R. When war broke out, he was overseas for several years with the Royal

Naval Air Service. He secured his commission as a lieutenant and in 1916 was engaged as a pilot in scout squadron work in the northern section of France and Flanders. He continued in the service until when flying near Ostend he was wounded by an enemy machine gun and had his right leg broken. He managed to see that the machine was guided back to the airdrome behind the lines. Lieut. Fox entered a hospital at Calais in October 1917 and was later removed to the naval hospital at Chatham, England. He was invalided home in February 1918 and received medical attention until July of that year. Then he was appointed an instructor with the Royal Air Force, specializing in armament and machine gun work in the school at Hamilton.

There Mr. Fox was when the Armistice was signed, and afterwards he became connected with the automobile business, specializing in accessories, tops, bodies, etc., until the latter part of 1921 when he joined the firm of Edward Clark & Sons, wholesale lumber merchants, as accountant. Mr. Fox is twenty-six years of age and is an enthusiast in the hardwood lumber line.

## Convict Makes Good at Sawmilling

Police Magistrate J. E. Jones, of Toronto, in delivering an address recently on "Prisons—Past, Present and Future," before one of the Men's Associations in the city, showed a number of interesting views of the prison farm at Burwash, twenty miles south of Sudbury. One of the pictures was that of the well-equipped sawmill on the farm.

It is the custom of Magistrate Jones to visit the different places of detention once or twice every year in order to see how some of "his boys" are getting along and become acquainted with the progress made in reform and humanitarian work.

While visiting the sawmill Mr. Jones noticed a stalwart-looking fellow and thought his features seemed rather familiar. He gave a nod to the worker, and, walking up to him said, "Haven't I seen you before?"

"Yes sir," came the reply.

"Where was it?" enquired the Magistrate.

"You should know!" replied the mill laborer, "I am one of your customers. You sent me here and I am glad of it. I am not proud of serving a term in this institution but it has proved to be my salvation. I have worked in every department of this mill and am now the foreman of the plant. To-day I am a skilled laborer and when I get out you will never see me around a prison again. I feel that I am thoroughly competent to take any position in an ordinary lumber mill, and fill it."

The fellow again thanked Mr. Jones and said he had not fear about making good in the future, and turning out to be a respectable, law abiding citizen.

## Renfrew Holds Successful Banquet

A most successful banquet was held at the Hotel Renfrew on April 24th under the auspices of the Renfrew Board of Trade. The event was a well attended and enjoyable one. G. L. Murray, president of the Board of Trade, presided, and among the speakers were Sir Lomer Gouin, Minister of Justice, and J. O. Herity, manager of the Belleville Chamber of Commerce, the former replying to the

toast of Canada and the latter to the Associated Boards of Trade. Hon. Thomas A. Lowe, who is well known in lumber circles, proposed the toast of Canada, and among the members of the banquet committee were G. M. French, wholesale lumber dealer, H. A. Jordan and others.

Renfrew certainly possesses a live Board of Trade, and the town purposes holding an Old Home Week which will be held from September 17th to 22nd. It is expected there will be a great reunion of the Old Boys of the town and county. William Dean is the energetic secretary of Old Home Week.

## May Develop Water Powers on Gatineau

Further development of the water powers of the province of Quebec will likely result if plans now being laid out by the running streams commission to dam the Gatineau River with its 200,000 horsepower still available. Notwithstanding the fact that damming work of unprecedented magnitude is being carried out in the Lake St. John district at Kenogami and the Grande de Charge, the Quebec Government will within the next two years start extensive works on the Gatineau River, on the Quebec-Ontario border. Preliminary instructions were issued recently by the running streams commission to prepare plans for the gigantic project and orders have been issued to a party of engineers to leave shortly to study the condition of development and the immediate advantages offered by the exploitation of those water falls on that river. No work will be started this year, as reports will not be available before late in the summer. If the project is found to be practical at all points of view, work will most likely be started early next spring and another large reservoir added to the series existing in the province.

## Higher Charges for Milling in Transit

The price for milling in transit work, such as dressing, resawing, sizing, etc., on points south of Bracebridge, Ont., has recently been increased on narrow widths from 25 to 50 cents per M feet.

All firms doing a milling in transit business are now exceptionally busy and rushed with orders. One leading Ontario concern says that it has been compelled to increase the figure owing to the present shortage of labor which rendered it necessary to make a general advance in their pay-roll.

The new list, which now prevails, is as follows on 1-inch, 1¼-inch and 1½-inch stock:—

Dressing 1 or 2 sides	1x4 and up	2.50 per M
Dressing 4 sides	1x4 and 5	3.00 per M
Dressing 4 sides	1x6 and 7	2.75 per M
Dressing 4 sides	1x8 and up	2.50 per M
Dressing 1 or 2 sides and matching	1x4 and 5	3.25 per M
Dressing 1 or 2 sides and matching	1x6 and 7	3.00 per M
Dressing 1 or 2 sides and matching	1x8 and up	2.75 per M
Resawing or ripping 1 cut	1x4 to 7	3.50 per M
Resawing or ripping 1 cut	1x8 and up	3.25 per M
For 2-inch stock the following prices are now in effect:—		
Dressing 1 or 2 sides	2x4 and up	2.25 per M
Dressing 4 sides	2x4 and 5	2.75 per M
Dressing 4 sides	2x6 and 7	2.50 per M
Dressing 4 sides	2x8 and up	2.25 per M
Dressing 1 or 2 sides and matching	2x4 and 5	3.00 per M
Dressing 1 or 2 sides and matching	2x6 and 7	2.75 per M
Dressing 1 or 2 sides and matching	2x8 and up	2.50 per M
Resawing or ripping 1 cut	2x4 and up	3.00 per M
Resawing or ripping 2 cuts	2x4 and up	6.00 per M
Sizing dressed 1 side and 1 edge	2x4, 5 and 6	2.75 per M
Sizing dressed 1 side and 1 edge	2x7 and up	2.50 per M
Sorting and other work		1.00 per M
Transferring in the rough		1.00 per M
Measuring and grading		1.00 per M
Bundling		1.00 per M

Three machine sets are allowed for each car but in case of an extra set the charge is \$1.50 each.

## Instructive Booklet on Electric Hoists

The Canadian Link-Belt Company has recently issued a very comprehensive and instructive book on "Electric Hoists and Over-head Cranes." It is not only profusely illustrated with photographs of actual installations showing some of the most recent Link-Belt electric hoist applications, but with line and wash drawings, the subject of proper installation and efficient operation is fully covered.

Going further than the usual "catalog," this new book tells, in print and picture, of the practices and methods employed by users in widely divergent fields.

For instance, the practices of a sewer contractor in Maryland, who used a hoist for removing dirt—and the methods employed at a ship building plant in Texas who employed the same means for moving and placing timbers, is illustrative of the wide range of activities covered by this comprehensive book. Copies of the book, called "Book No. 480," are obtainable from the Canadian Link-Belt Company, Limited, Montreal and Toronto.

# Babson Believes Canada is on Verge of Boom

Canada and Canadian business are sound financially and fundamentally, according to Roger W. Babson, who recently returned from his annual inspection trip throughout the United States and Canada. This widely known statistician says that, if anything, business is becoming active too rapidly in the United States. He sounds a warning note and says that while today this state of affairs prevails across the border, the situation may be better in Canada next year. Mr. Babson declares business conditions are much like a storm. They travel across the country in waves; each section gets the storm but all do not get it at the same time.

In a recent interview, Mr. Babson expressed some worthwhile opinions regarding the status of the different industries in Canada and drew comparison with conditions as they are shaping up across the border. He said that it seemed to be a fundamental principle of economics that the Dominion lagged about a year behind the United States, both as to action and re-action, decline and recovery. Mr. Babson continued:

"Everywhere people are talking prosperity, building is booming; prices are again advancing and wages are rising," but too much of it all at once is dangerous. When a patient recovers too rapidly, a relapse may occur. The business men of the United States need to remember the warning of that old capitalist and philosopher—King Solomon—who cautioned the business men of Jerusalem that 'pride goeth before destruction and a haughty spirit before a fall.' Personally, I much prefer the more gradual and deliberate manner by which Canada is passing through her readjustment. We have much to learn from our northern neighbor. Today conditions are better in the States; but unless we take care, business will be better in Canada in 1924 than it will be here.

## Improvement in Canada is Imminent

"I spent some two weeks of my trip studying Canadian conditions," continues Babson, "and was very much pleased with what I found. Various factors suggest that the Dominion stands in about the same position in the economic cycle occupied by the United States six or eight months ago. If this is so, we must look for Canadian business to improve rapidly during 1923. The farming situation is better and more favorable conditions prevail in trapping and trading of the north woods owing to the state of the fur market and the plenitude of furred animals. British Columbia is in a more prosperous position than the prairies. Its farmers did fairly well last year and the fruit-growing sections had very profitable yields. Lumber demand is expected to develop to quite sizeable proportions. Even in the mining towns I look for a fair improvement. In British Columbia business during the spring months should be good.

"Canadian sales efforts during the next few months should be concentrated on the eastern provinces. The industrial communities of Ontario and Quebec look relatively the best and even in the agricultural sections conditions are more

favorable than on the prairies. Mixed farming helped to lighten the load of the eastern farmer. Industrial activity in Canada is estimated to be in the vicinity of 70 per cent of capacity. Unemployment and short time is still prevalent in some lines. Gold mining is an outstanding exception. This line is fairly busy and is resulting in considerable prosperity in such centres as Porcupine and Kirkland Lake, Ontario.

"Industries manufacturing goods for human consumption or covering are perhaps most active and have the most encouraging outlook. The best customers will be found in the cities. I have in mind all of the manufacturing centres of Southern Ontario and Quebec, but especially those producing pulp, boots and shoes, textiles, clothing and food products. In the maritime provinces, a firm foundation is being built up for business improvement. Basis industries are now dull, but I believe that warmer weather will bring decidedly better markets for lumber, fish and other local products. By summer, New Brunswick and Nova Scotia should look nearly as attractive to sales representatives as southern Ontario and Quebec.

## U. S. Must Turn to Canada

"A more hopeful feeling is developing, however, in the prairie and other agricultural regions. Better prices for farm products are helping the Canadians as well as the farmers in the States. As the Canadian farmer was slower in feeling the good effect of this increase in prices of farm products, so, he will enjoy it longer. It seems to be a fundamental principle of economics that the Dominion lags about a year behind the States, both as to action and reaction—decline and recovery. Hence, I say that while today conditions are better in the States, they may be better in Canada next year. Business conditions are much like a storm—they travel across the country in waves. Each section gets the storm, but all do not get it at the same time.

"The United States should be better neighbors to Canada. Some day the States must turn to her for natural resources. When our timber is gone, when our water power is all developed, when the price of land here makes the rising of cattle prohibitive, we must turn to Canada.

"The Babson chart continues to register the slight inflation to which I have already referred. Today it still stands at 5 per cent above normal. With the readjustment only 60 per cent completed, this is not a healthy sign. It is dangerous to raise prices or wages at the present time. Let us have prosperity, but let us not have inflation. Things that have recently occurred in the stock market, the spirit of the bootleggers, and the general desire of almost everyone to get something for nothing are not healthy signs here in the States. We need more character and less speculation at the moment. It, of course, is true that men make values, but let us not forget that souls make men.

## It Pays to Stay With the Job

Do you remember the childish superstition about the pot of gold, buried where the rainbow touched the ground? But no one has ever found the end of the rainbow.

Many a poor wanderer has followed the glittering lure of "easy money," only to return after wasted years, weary in body and broken in spirit.

The home stayer and the home makers are men who find prosperity and happiness.

The worker who wanders from job to job, and from town to town, is following a rainbow that has no end.

Serve your own selfish interest by staying with the employer who pays a just recompense for your skill and energy.

Invest years of faithful service. Your reward will come in promotion, and your employer's good will.

There are days when men are too few for the work that must be done.

There HAVE been years (and may be again) when men were plentiful and jobs were few.

When the day comes, that men must be laid off, be one of the workers selected to stay.

Your employer isn't deaf and dumb and blind.

If he knows the men who are loyal, when the temptation to follow the rainbow lure is strong.

Keep to the work you know best—it's a necessity now, and good business ANY time.

Opportunity can be spelled with four letters—WORK.

## A Prescription—Try it Out

If you are poor—work.

If you are rich—continue to work.

If you are burdened with seemingly unfair responsibilities—work.

If you are happy—keep right on working. Idleness gives room for doubts and fears.

If disappointments come—work.

If sorrow overwhelms you and loved ones seem not true—work.

### Keeping to the Forefront in Business

There are many problems which the retail lumberman has to face. They cover a very wide range and, perhaps, he does not get one difficulty removed before another presents itself for adjustment. The man who is forging to the front in business today is he who feels that he has not mastered every detail of his calling and is willing to learn. No matter how many years he has spent in a trade, he discovers that by rubbing shoulders with other men and coming in contact with other institutions and associations that he can pick up some pointers. He cannot do this by seeking to live only to himself, he must mix with other men engaged in the same vocation.

No one man or firm has all the ideas that are extant or possesses a monopoly of brains and foresight. He may lead in one line today but is liable to lag behind tomorrow in another. It is only with watching every avenue of activity, every detail of development and giving the closest attention to purchasing, stock, delivery, service and collections he builds a strong mercantile structure that can withstand the attack of dull times and diminished building operations.

A business may be conducted ever so efficiently but it can never reach as large proportions as it otherwise would unless it is bolstered up by advertising. The most progressive organizations in the country and the liveliest merchants in every centre are generally the heaviest users of printers' ink and know the real value of well-directed publicity. There are comparatively few people still in business today who adhere to the old idea that advertising is not a trade builder. While volume of turnover has increased by reason of augmented population and enlarged wants, there is no doubt that a great deal of it is attributable to publicity of pulling power and attractive appearance.

It is relatively easy to sell a man something of which he is in dire need or has set his heart on but to convince him that he should spend money satisfying his social, recreational, intellectual or aesthetic proclivities, is quite a different problem. Here is where the strength and purpose of advertising comes in. It has made many lines of business bloom where there were no flowers before. Many a business man, who has built up his trade by publicity and has suddenly ceased to advertise, thinking that he was sufficiently well established and his wares widely enough known, has found that a decline has set in immediately after and eventually some competitor, who has kept unceasingly at it, has won the place which he formerly held.

Publicity is necessary all the time, but there are certain humans who seek to beguile themselves with specious arguments to the effect that advertising does not pay. They have tried it once or twice. They declare that it adds to the cost of goods and is not really essential in

connection with a staple, ordinary, everyday commodities such as lumber, lath, posts, flooring, shingles and builders' supplies. This is a sadly mistaken notion, for it is inconceivable that hundreds of thousands of successful business men would continue their vast publicity campaigns if such arguments as those outlined against the value and effectiveness of advertising held good.

Then again there are other people who think that advertising should do the whole trick; that it is a sort of amulet which will capture business without being backed up by service or quality. In every case it is necessary to deliver the goods. There is an old axiom to the effect that "the Lord helps those who help themselves," and the same reference might be applied to advertising. It aids those who seek to render worth and value in all dealings with both old and new customers.

Advertising, when well directed, wins repeat orders from former buyers, as well as new patrons, and it is on this evidence of confidence and continued patronage that great businesses are built. Repeat transactions are best for any business and particularly so in the lumber lines. He, who advertises wisely and well, lives up to his promises, is quick to settle any claims or disputes, keeps himself and his business clear of suspicion or misrepresentation and does the right thing at all times and occasions, is the one who wins out in the end and leaves a name that stands for all that is truest, best and most progressive in the community.

### The Growing Influence of Organization

The lumber trade of the Province of Quebec was, until a few months ago, without any active trade associations, either manufacturing, wholesale or retail. There was a small retailers' association in the city of Quebec and a limited association composed of the members of the Montreal Board of Trade. Previous attempts to form associations found poor response. The wholesalers of Montreal were the first to make any real move, this being followed by the retailers, with the result that Montreal now possess two active associations.

The retailers have made a further advance, and are forming a provincial-wide association. The Montreal retailers, under the presidency of J. P. Dupuis, have laid a substantial foundation for this wider organization. The meeting at which it was decided to expand, was very largely attended by dealers from all parts of the province. It looks, indeed, as if there is a widespread opinion that such an association is needed. A large number of retailers has been appointed to do missionary work in their districts and to report the result to a meeting in Montreal on May 8th.

The idea of dividing the province into eleven centres is a good one. Each centre will constitute a branch, holding meetings as required to discuss local and general trade subjects. Each will be in touch with the head office in Montreal through accredited representatives who will meet in Montreal at regular intervals. In an association of this character there is a tendency for the interest to diminish, owing to the fact that the majority of the members are too far away to be in constant touch with the central body. By means of direct representation this problem is largely solved and the interest thereby sustained.

Co-operative effort is the basic motive for extending the Montreal Association into one covering the province. The problems of the retailer are much the same whether he lives in the towns and cities or in the country districts, and the object is to secure unity of action in dealing with these. It is obvious that a strong organization is more likely to secure results than a weak one; its influence is greater and its field of activity wider. The promotion of friendly intercourse between retailers in different parts of the province is a side of association work which is not to be overlooked. Through an association of this kind men engaged in the same line of business are able to meet in a way not otherwise possible. This is especially true of a provincial-wide association where the monthly or quarterly meetings form a common ground for straightening out questions of mutual interest, for the cultivation of goodwill and for enlarging the social aspect in relation to trade matters.

### Watch Both Collections and Profits

In the management of any business a great deal of attention is given to service, stock, cost accounting, delivery, overhead, insurance, shipping, etc., but one of the things most neglected is the matter of collections. Many a dealer has gone down and under because he was too generous by nature or instinct. He sympathized too much with the other fellow; in fact, he could see the point of view of the plausible promiser or delinquent more quickly than he realized or was cognizant of his own pressing necessities. It should be remembered that a slogan heard some years ago contains more than a

modicum of truth. It is that a sale is only a loss until it is paid. This is perfectly true and it is the cash collected which counts rather than the volume of outgoing stock or drays of material.

Speaking the other day on the subject that prompt collections were essential to success, a leading retailer said that he had never known a dealer to go broke because he was too prompt a collector, but he did know of many who had succumbed because they allowed their customers to dictate the terms of payment. Continuing, he declared, "If you sell a man a load of lumber on time, amounting to \$80 or \$90, he is using \$80 or \$90 of your money without interest. It surely would be too bad if the customer allowed his indignation to rise because you asked him for the money belonging to you. I have noticed that the longer time you give a man, the harder it is to gather in the amount in arrears. Prompt collection is a success, almost beyond comparison."

Another thing pointed out by this retailer was that the lack of profit is often due to ignorance rather than any other cause. Dealers do not keep well posted on the markets, cost of doing business, the length of time accounts are to run, etc. Sometimes the yardman thinks he has made about 15 per cent when in reality he has not cleaned up 5 per cent, and sometimes has done business at a loss.

It seems that a certain co-operative yard in the West had its manager on the carpet for a shortage. The heads of the concern claimed that he had sold everything at a profit of 15 per cent. Their percentage of expense for doing the business, they maintained, was only 10 per cent on a \$70,000 business, or \$7,000 in all. 15 per cent profit, they contended, was \$10,500 or a net clean up of \$3,500, but it was not there. By some hocus pocus methods it had disappeared or, presto, a change had taken place. The crux of the matter was that this organization had only made a net profit of \$2,130 instead of \$3,500, for the simple reason that they added 15 per cent to the cost and thought they had 15 per cent on the sales. It makes a vast difference whether you reckon your profits on the cost price or selling price. The two should never be confounded, for when one computes a percentage of profit on the buying price and the expense on the selling price, there is a decided divergence, and in this case there was a leak of almost \$1,400.

Very frequently retailers are asked to "estimate" on this and on that. Some take a deal of time and go to a lot of trouble to oblige people from whom they may never expect, and probably never will get business. They do not for policy's sake like to turn inquiries or callers down flat, but at the same time they recognize that much of this "estimating" is of a fruitless character. One Western man humorously put it that, if he sold every bill on which he estimated, his plant would be the largest in Canada but, with a twinkle in his eye, he naively remarked, "When a dealer knows it is a non-productive customer, he need waste but a few moments in 'figuring.'" On a \$9,000 or \$10,000 house he can, with ten minutes' work, give offhand a price, whereas anyone, with an atom of knowledge regarding building, is fully aware that this is a job requiring hours—rather than minutes."

### Why not Extend Courtesy to Correspondence

The third week in April was observed in many centres as "Courtesy Week." The campaign was put on under the aegis and direction of the Kiwanis Club, who offered valuable prizes to school children for the best essays on courtesy. Every member of the organization and his friends were urged to make special efforts to see that politeness and civility held full sway and that the trials, acerbities and perplexities of everyday existence were ameliorated as much as possible by a spirit of urbanity and consideration.

It is hoped that the example set will continue to influence each community and that all business negotiations and transactions will be marked by kindlier feeling and more pleasant speech. In these days of rush and hustle we are inclined to be too gruff and surly, to neglect the little civilities which make agreeable the pathway of progress, and imagine that, by being sharp or acrid in reply, we are just a little different from our fellows. This is a miserable mistake. True culture and innate politeness are possessions which can be easily acquired by daily practice.

Courtesy, however, is a broader term than many suppose. It does not alone mean elegance of speech or exemplary deportment, but should be extended to other relations in life. Many men, who are thoughtful and considerate in conversation and conduct, are far from being polite or punctilious in the matter of meeting their letter-writing obligations. Inquiries, communications, memoranda and other messages are sent time and time again without any appropriate answer or even a formal acknowledgment.

It has been well said that honesty has a broader application than merely paying one's debts or never uttering an untruth. It implies being true to one's nature, to one's friends, to one's convictions and to one's ideals. The same interpretation may be made with respect

to courtesy. It is not only a matter of manners and mentality but also relates to epistles, both of a business and social character.

There are more flagrant breaches of correspondence courtesy to-day than in any other line of activity. So many persons and firms, unless letters spell an order or promise something in the way of direct financial return, or prestige, neglect entirely the acknowledgment of all communications. They possibly imagine that in so doing no harm or affront can result from the oversight. When later pressed to a point where a reply is necessary, the offender generally gets out of the dilemma by representing himself as being "exceptionally busy," "an oversight," "fully intended to answer," "letter got lost" or "mislaidd," "should have been attended to," etc.—excuses that are as flippant as they are frequent and might better not be proffered.

The various organizations which seek to cultivate courtesy in business might seek to extend its operation in other directions and see that it comprehends business correspondence as well as to conduct in general.

### The Vital Element in Mercantile Life

Confidence is a vital element in the lumber business. Without it, trade as carried on to-day would be impossible. How many transactions are executed on the mere word of the parties interested? How many sales and purchases are the results of telephone conversations, sometimes confirmed in writing and sometimes not? The entire basis of such deals is confidence that the goods will be delivered according to agreement by one party, and confidence that payment will be made by the other.

It sometimes occurs that this confidence is misplaced; that the goods are not up to grade on the one hand and that the money is not forthcoming on the other. Every trade, however, is seeking to build up a reputation for reliability and honesty either as a buyer or seller. Even firms which are known to act questionably, are anxious to create a good impression—it may be for their own gain, but there is still the desire to be well thought of by others in the trade.

We do business on reputation. The public buys on reputation. A man or firm reputed to be untrustworthy or tricky is not likely to go far; the man or firm may get a certain amount of trade, but the chances are that repeat orders will not be given or accepted if the buyer or seller has been once caught.

"What do you know about——?" is not an uncommon inquiry among men in a particular branch of business. Such inquiries are in essence directed to the reputation of the party concerned. As a rule, one hesitates to fill an order from a firm concerning whom we know little or nothing, but we have no such hesitation in the case of a firm with a good reputation or with whom other transactions have been satisfactory. A high financial rating is not everything—a reputation for fair dealing and for living up to obligations counts for a great deal. It is not without cause that many credit bureaus put strong emphasis on this side of business dealing—an emphasis born of a long experience in dealing with traders' affairs in many lines of commerce.

### No Man Can "Go it Alone"

There are three requisites for a successful business. They apply to your business, to any business. The first is a plan. The second is capital. The third is organization. And the greatest of these is the plan.

Assuming that you have the organization—that you, the boss, are the organization—and that you have the capital, which may be your own character and credit—have you the plan?

The plan must be a comprehensive plan—made up of detailed plans for developing new business and keeping it when you have got it.

The successful business of the future will be the business of ideas, of consistent planning, planning in such a way that you may not only meet changed conditions, but yourself change the conditions to your own advantage.

Ideas are often purely inspirational. More often they are adaptations and modifications of old ideas. It is no longer possible for a merchant or manufacturer to shut himself off from the activities of his fellows. Every source of inspiration must be tapped. The plans of your competitors in your own town and in other parts of the country are of vital concern to you. No man can "go it alone."

This is the reason why you should attend district meetings and your Association convention. As sources of inspiration and ideas these meetings are your largest and nearest supply.

# What The Lumber Trade is Doing in Canada

The Taylor Lumber Co., Limited, Winnipeg, was recently incorporated.

The International Fibre Board Co., Limited, is a recent registration at Montreal.

The Dutton Wall Lumber Co., Limited, have sold their local branch at Eden, Manitoba.

The Kootenay River Lumber Co., Cranbrook, B.C., will start at once on a new sawmill which will cost about \$20,000.

A. L. Eastcott, manager of the Pembroke Lumber Co., Pembroke, Ont., spent a few days recently in Toronto on business.

Forest fires recently destroyed twenty houses in a deserted camp of the Canadian Collieries Co., near Courtenay, Vancouver Island.

M. B. King, manager of the King-Farris Lumber Co., Vancouver, was in Toronto lately calling upon the trade.

John Fraser, of the Pine Lake Lumber Co., Pickerel, Ont., spent a few days in Toronto recently.

Maguire, Paterson & Palmer (Canada) Limited, Pembroke, Ont., have changed their name to the Canadian Splint & Lumber Corporation, Limited.

Kilgour Bros., 21 Wellington St. W., Toronto, makers of paper and cardboard boxes are making preparation for the erection of a factory at Windsor Mills, Que.

National Wood & Pulp Co., Limited, Montreal, was recently granted a provincial charter to manufacture lumber and pulpwood.

W. J. Merkel, of Milwaukee, Wis., vice-president of the Schroeder Mills & Timber Co., spent a few days recently in Toronto on business.

George W. Grier, of Montreal, vice-president of the Canadian Lumbermen's Association, spent a few days recently in Toronto on business.

A. E. Lloyd, of C. Lloyd & Sons, Wingham, Ont., and Mrs. Lloyd, who have been spending the past winter in various points in the South, have returned home.

The offices of the A. E. Gordon Lumber Co. are being removed from 705-706 Confederation Life Building, Toronto, to 1009 in the new Federal Building, corner Richmond & Sheppard Sts.

Brown Corporation, La Tuque, Que., is contemplating the erection of a new paper mill at St. Angele de Laval, Que. The company has purchased 400 acres of land and is preparing the ground for construction.

Arthur G. Bowler has resigned as the Montreal representative of the National Hardwood Lumber Association in order to represent the Johnson Lumber Company, Manchester, N.H. He is succeeded by R. Orr.

William Milne, of William Milne & Sons, North Bay, Ont., called upon Toronto friends in the lumber trade lately. He has just recovered from an attack of the 'flu, which confined him to his house for several weeks.

Howard Hesson, of W. J. Hesson & Co., lumber retailers, Sault St. Marie, Ont., paid a business visit to Toronto recently. He states that heavy snowfalls in April at the Soo have retarded early building operations.

W. H. Nelson, manager for G. Mason & Co., Limited, Midland, Ont., was in Toronto lately on business. The firm's cut of hardwood, which this season will amount to about 2,000,000 feet, and consist principally of maple, has been purchased by Edward Clark & Sons, Toronto.

R. B. Herron, late of R. B. Herron & Co., Tionaga, Ont., has embarked in the wholesale lumber line in Toronto, and opened an office in the Bohan Building, 33-43 Adelaide St. West, where he will specialize in all kinds of wood. P. L. Bonsall has taken charge of the office work for Mr. Herron.

R. J. Hutcheson, of the Muskoka Wood Mfg. Co., Huntsville, Ont., was in Toronto recently and attended the regular monthly meeting of the Wholesale Lumber Dealers' Association. During the progress of the proceedings he was called to the telephone and was informed that his plant at Huntsville had another narrow escape from being swept out of existence by fire. The roof of the boiler house became ignited but the flames were extinguished before fur-

ther damage was done. Mr. Hutcheson says that the hardwood flooring plant is operating satisfactorily and orders are coming in nicely.

The Haileybury Lumber Co., Limited, who are dealers in rough and dressed lumber have recently been organized and granted a charter. The authorized capital is \$100,000 and the capital subscribed is about \$40,000. The president of the company is M. J. Conkey, and the secretary H. C. Dunbar. The directors are H. F. Strong, J. D. McDonald and G. F. Summers.

The Canadian General Lumber Co. are removing their offices from the seventh floor of the Bank of Hamilton Building to the tenth floor of the Federal Building, corner Richmond & Sheppard Sts., Toronto. When all the floors of the building are completed, several other lumber firms will also take up their quarters there.

F. C. Manning, who for 21 years was with the Revelstoke Sawmills Limited, Calgary, and has resigned from that organization, was lately in Toronto on business. Mr. Manning is now associated with W. J. Lovering, of Toronto, in the Lovering Lumber Co., Limited, with headquarters at Wasa, B.C., and was a guest at the last regular monthly meeting of the Wholesale Lumber Dealers' Association, Inc.

B. C. Keeley, Coast manager of the Canadian Government Merchant Marine recently addressed the Rotary Club at Prince Rupert, B.C., and said that he was surprised to find the mills there not operating. He said the mills in Vancouver were working day and night, and recommended that Prince Rupert develop local cargoes which would mean the C.G.M.M. boats coming there. If only deckloads were available vessels would, nevertheless, come for such loads.

E. W. Backus, of the Fort Frances Pulp & Paper Co., Fort Frances, Ont., has purchased the holdings of the Rat Portage Lumber Co. It is understood that the transaction does not include the company's Pacific Coast interests. The Rat Portage Lumber Co., whose business interests centre in the Kenora district, was at one time one of the biggest operating concerns in Canada, and the head of the organization was the late Sir D. C. Cameron, Lieut.-Governor of Manitoba.

Toussaint Prefontaine, one of the oldest retail lumbermen in Canada, died in Montreal on April 18, aged 87 years. He retired several years ago from active business, which is now carried on under the name of T. Prefontaine and Company, Mr. T. Prefontaine being one of his nephews. The late Mr. Prefontaine was a brother of the late Hon. Raymond Prefontaine, for many years, Mayor of Montreal, and later Minister of Marine and Fisheries. He had been ailing for the past year. He was born in Longueuil and has always lived in the Montreal district.

It would seem that the \$2,000,000 pulp and paper mill, which Howland & Waltz intend erecting at Nelson, B.C., will be gone ahead with in the near future. The company will build a sawmill on part of the site which it has obtained for the paper plant. Gangs of men have been put to work clearing up the site and soundings of the bay have been secured with a view to constructing a boom capable of handling 1,500,000 feet of logs. The new sawmill will be in operation in a few weeks and will cut lumber to be used in the construction of the pulp and paper plant.

An item of much interest to shareholders of lumber, pulp, paper and other companies is that the Ontario Companies' Act is being amended so that any shareholders in a company may now receive a financial statement by merely asking for it, failing which there is a penalty of \$100. A sub-committee of the legal committee of the Legislature was appointed to consider the proposed amendment that "no payment or payments shall be made to the president, vice-president or any director of the company, other than as salaries to officers for actual services as manager, secretary or treasurer, in any year in which a dividend of less than five per cent. is declared and paid to the shareholders of the company."

D. M. Kean, of Orillia, Ont., who is well known in the lumber line says there is an increasing demand for lumber in his locality, and this applies to all grades and kinds, with prices steadily advancing. There has been more timber taken out in the vicinity of Orillia this winter than in any recent years. Mr. Kean specializes in hemlock, spruce and cedar and also maple flooring, and does considerable in lumber in transit. His cutting is done at Hampshire Mills where he runs several portable mills which he says will cut the finest of lumber. Mr. Kean, who is an Orillia boy, was born in that town and gained his experience with his late father who made a specialty of lumbering through his entire life.

## *A Man and His Business—Now the Biggest in the British Empire*

To conceive and create an organization of national scope and make it the largest industry of its kind in the British Empire—and all within the period of twenty years—reads more like a romance than an actual accomplishment. The man behind this great enterprise is Frank Kent, president of the Seaman, Kent Co., Limited, Toronto—another illustration of the utterance of Emerson that any great institution is but the lengthened shadow of some personality whose pluck and perseverance never let go.

At the back of this gigantic undertaking in the flooring field is one who has risen from the ranks and knows the process of wood production from the camp to the consumer. Mr. Kent spent several seasons in the bush, mills and factories getting first hand knowledge of operations and coming closely in contact with men and materials. He is practical and progressive and, in the face of setbacks amany and difficulties not a few, steadily persisted and won a foremost place as one of the forceful factors in national development.

The story of the inception and expansion of "Beaver brand" flooring in popularity and demand is an equally entrancing one. To-day the capacity of the plants of the company is two and a half million feet a month and the investment in factories, equipment, yards, warehouses, limits, etc., represents over a million and a half dollars. The Seaman, Kent Co. is an aggressive organization and its esprit de corps and co-operation are most marked. These characteristics extend into every avenue of the business with the result that quality, merit, dependability, attractiveness and beauty are distinctive of every foot of the output of an organization which has made the name of Seaman, Kent synonymous with that of hardwood flooring, not only in all the provinces of the Dominion but even in foreign fields.

To describe the process of its manufacture, the many operations, the equipment installed, the facilities required, the selling and distribution systems and other details, would only be a recital of routine whereas the readers of the "Canada Lumberman" are more interested in the men and the material. A few figures must satisfy. The dry kiln equipment of the company accommodates 925,000 feet, and the cooling shed capacity is, approximately, 300,000 feet, so that there is dry and cooling accommodation available at any given time of 1,225,000 feet. There is a storage track capacity, for lumber ready for the kilns to the extent of 250,000 feet. The company have, therefore, on hand 1,500,000 feet of lumber constantly on kiln tracks.

The Seaman, Kent Co. believe that quality tells and that every expenditure in the way of care of the finished material is amply justified. The building trade knows that lumber cannot be properly dried and treated in kilns doing custom work. To ensure lumber going to the machines in perfect condition, ample kiln capacity is essential right at the point of manufacture and the process must be supervised by men who are proficient in this particular line. Seaman, Kent Co. recently enlarged the cooling sheds at West Lorne, Ont., which plant, owing to the large number of orders, on hand, is now running both night and day. The other factories of the company are located at Meaford and St. Agathe, Que., and there are modern warehouses in Toronto, Montreal, Winnipeg and Edmonton.

Rigid regulations provide for a thorough examination of every foot of hardwood flooring that goes from the mills. Selecting and grading are an exact science with the firm and the purchaser is assured that his completed floors will not run below the standard selected.

Much more might be said regarding the enterprise and development of the Seaman, Kent Co. who are enthusiastic exponents of publicity and have made known far and wide the attractiveness, durability, cleanliness and sanitation of hardwood flooring. The

propaganda carried on by them has done much to banish the daily drudgery of household work and make inviting the interior of many a Canadian home. The work has also broadened the business of the average retail lumber dealer, extended the activities of contractors, improved the appearance of many edifices and generally placed structural art on a higher plane.

From the forest tree to the polished floor of my lady's salon, banquet hall or assembly room is a story symbolic of the Seaman, Kent Co. Yet when all is told, it must be remembered that back of the institution there is the so-called human element which runs through the entire personnel of the organization. Many heads of the departments have been for years in the service of the firm, and loyalty and devotion are qualities which tally in the widening and welfare of any business.

The staff, which now consists of over three hundred, has been stimulated by the example of the president and general-manager. Mr. Kent's hobby is work and more work, and yet he is a man who is bigger than his business. His life has not run solely along one groove or been confined within shop or office walls. His sympathies and work are cosmopolitan in character and freely has he given of

his time and talent to public, philanthropic and humanitarian enterprises. While through initiative and foresight Mr. Kent has built up a company, the largest of its kind under the British flag, he has demonstrated that he is a man of generous motives and wide sympathies. For several terms he was Mayor of Meaford where he resided for many years until the company removed its head office to Toronto in 1920 and became incorporated. He is a director of the West End Y.M.C.A. and chairman of the Boys' Farm Committee of the Rotary Club.

At a recent meeting of the Wholesale Lumber Dealers' Association in Toronto, Mr. Kent gave a short review of the great task which he and others are helping to carry out among the under-privileged boys of the city. A home is being conducted at Wilcox Lake, North Yonge St., to look after lads whom Judge Mott of the Juvenile Court considers worthy of being given a chance rather than sending these erring ones to prison or a detention home. Mr. Kent believes that the father should be a companion to his boy; should try to enter into his son's life, understand his aims and ambitions and spend considerable time with the lad. It pays in every

way, not alone in morals, but in manhood. Much more might be added but a few of the sign-posts of a successful career have been pointed out.

Mr. Kent was born near Bowmanville just a year before Confederation and spent several years in Bruce County, after which he came to Toronto and became an apprentice in a furniture factory at the low wage of \$2.50 per week. Less than twenty years ago in the upper flat of a factory on Northcote Ave., with only a hundred dollars borrowed capital, his real start was made in the flooring line. He would go out and sell the product in his spare time and during daylight hours see that it was turned out. Quality was his slogan and he gained the confidence of his consumers and built up surely but steadily a connection with the trade which has to-day made possible the premier position held by the Seaman, Kent Co.

Soon after starting a factory in Meaford, which town afforded splendid water shipping facilities, the plant was destroyed by fire, entailing a loss of over \$100,000. Mr. Kent did not sit down and bemoan his fate for he is a man who has never lost faith in the future, possessing both vision and optimism. Rebuilding operations were soon under way on a larger scale, and from that period down to the present the business has shown a gratifying gain. To-day Seaman, Kent is recognized as a great Canadian institution, financed, managed and operated by Canadian capital, brains and brawn. It is an achievement outstanding in the industrial interests of the Dominion.

Frank Kent, Toronto

# Activities of Lumber Trade on Pacific Coast

Lumber mills in Northern British Columbia along the line of the Grand Trunk Pacific will soon have an opportunity to enter the export business if arrangements now under way with the Canadian Government Merchant Marine are consummated. The plan is to have ships of the Merchant Marine make regular calls at Prince Rupert thus enabling the mills of that district to book orders for export shipment by water. B. C. Keeley, superintendent of the C.G.M.M. pointed out in an interview that lack of tonnage was the reason why their boats did not include Prince Rupert in their regular port of call but any plan to develop lumber shipments from B.C. would have the support of his company and to show that this was no idle boast, they were prepared to offer a reduced rate out of Prince Rupert of one dollar per thousand feet.

The Ontario lumber retailers may be wondering why the price of doors from the Pacific Coast are still being quoted "firm to higher." The following news item gleaned along the waterfront of Vancouver by "Canada Lumbermen" correspondent may throw a little light on the subject: "The ocean liner "Cardiganshire" is in port loading. Included in her cargo is a parcel of 15,000 doors for England." They may also be holding back orders waiting for a slump in shingle prices. In that event, the fact that the steamer J. L. Luckenbach is in port loading twenty million shingles for the Atlantic seaboard, may be of interest.

The Summerland Lumber Company Ltd., has commenced manufacturing lumber at its new mill at Myren, on the Kettle Valley Railroad. In addition to the cut of this mill, the company has contracted for the entire output of the mill at Shingle Creek. As Summerland is situated in the heart of the fruit belt of B. C. the greater part of their output will be manufactured into box shooks.

Up in the Nicola Valley, in central British Columbia, where irrigation is essential to a successful harvest, a large dam to hold the water of Mamette lake has recently been constructed. To complete the scheme of supplying the adjacent lands with water a large amount of flume work is necessary. This work, necessitating an expensive outlay for lumber and not being in close proximity to a lumber mill but having sufficient timber on their lands, prompted the erection of a sawmill. The mill has been built and is now in operation, under the management of Dodding and Tyner. The combined stand of timber is estimated at eight million feet, and after sufficient has been cut to meet private needs, outside business will probably be sought.

Reflecting general advancement in the trade of the Port of Vancouver a compilation of export tonnage figures prepared by the Vancouver Merchants' Exchange shows that in the first three months of this year there has been a decided increase compared with the corresponding period in 1922, lumber and shingles being responsible to a large extent for this increase.

Lumber exports to United States ports for the three months since January 1 are about three times as great as in the corresponding three months of 1922. In 1922 the exports were 5,915,488 feet, while this year to date the exports are 16,960,000 feet.

Last year for the period January 1 to March 31 the port exported 175,483 bundles of shingles to New York. This year the amount exported to that market for the same period is 905,734 bundles.

British Columbia is famous the world over for its towering mountain peaks and tall trees. Now comes the announcement that this province will shortly be able to boast of the largest smokestack in the Dominion to be erected at Powell River for the Powell River Pulp & Paper Co., Ltd. The big stack will be 280 feet high with a diameter of 21 feet at the bottom and 15 feet at the top and will be of concrete and reinforced steel construction. This chimney is part of a \$500,000 steam power plant in course of erection by the company.

A. T. Davidson, who is in charge of white pine blister rust control operations in British Columbia is busily engaged making observations and experiments in connection with this work. He left recently on a trip along the Pacific Great Eastern Railway where experimental plots will be established. All species of native wild ribes and Western white pine will be planted and later exposed to the rust. In this way the susceptibility of the different plants to the disease will be discovered. All the specimens which will be planted come from parts of the Western coast where it is known that there is no disease.

An interesting action is pending in the British Columbia courts between the Penticton Sawmills, Limited and the DeMuth, Broderick Lumber Co. regarding certain timber limits at Kirkton. The Penticton Sawmills Limited allege a right under contract to a balance of 500,000 feet of timber from the Kirkton limits, while the defendant company maintains that owing to the Penticton Sawmills Limited having failed to live up to the contract it is released from the agreement, and has therefore refused to deliver further logs. The first step in the action has been the obtaining of a temporary injunction by the Penticton Sawmills, Limited, restraining the other company from dealing with the timber until the rights of the parties have been decided by the courts. An important feature of the case which will be of interest to the logging industry in general centres around the question of what is "bush run" in logging operations.

Announcement comes from Cranbrook of a new lumber manufacturing concern for that district. The name of the Company is the Kootenay River Lumber Company, the Principals being Malcolm Horie, George A. Leitch, T. M. Roberts, M. A. Beale and J. A. Arnold, all well-known lumber men of the interior district. Operations will commence early in May with a daily capacity of 25,000 feet. Mr. Malcolm, for many years a foreman with the East Kootenay Lumber Company, will have charge of the mill.

H. G. Wells, formerly of the Wells Lumber Company, Seattle, Wash., is now connected with the Allen-Stoltze Lumber Company of Vancouver. Mr. Wells is well known in lumber circles on the coast and is no stranger to Vancouver. He was given a fitting welcome into the ranks of the B. C. Lumber Wholesalers Association at their weekly luncheon last Wednesday.

The S. S. Heathfield is at the Great Northern docks, Vancouver, loading a large cargo of general lumber and timbers for shipment to Montreal. The entire order is being filled by the Rat Portage Lumber Co. Ltd.

A fire on April 9th completely destroyed the small mill of the Beaver Lumber Company at Port Alberni, on the west coast of Vancouver Island, owned by Mr. Norman McEachern.

Horace W. Brownlee, 30, manager of the Beaver Lumber Company's yard at Rosetown, Sask., was fatally injured recently when a ladder on which he was descending from a lumber rack in the yard slipped from under him. He fell about ten feet, head first, sustaining a fractured skull, and died a few hours later without regaining consciousness. The late Mr. Brownlee was a native of Carleton Place, Ontario.

Among the companies incorporated in B. C. during the week ending April 14th were the following: The B. C. Timber Lands, Limited, a public company with a capitalization of \$4,000,000. Head office, Vancouver; Brunette Lumber Co. Ltd., New Westminster. Capital \$700,000; Port Moody Lumber Co. Ltd., a private company capitalized at \$350,000 with head office at Vancouver.; Yale Lumber Company, Limited, \$25,000, Vancouver; Nelson Lumber & Manufacturing Co. Ltd., \$15,000.

Andrew Haslam, for many years prominently identified with the lumber industry of British Columbia, and a pioneer of the province, passed away at his residence in Vancouver on April 9th at the age of 77 years. A native of Donegal, Ireland, Mr. Haslam came to Canada in 1861 and settled in New Brunswick where he remained for nine years. At that time the call of the West and the possibilities which it held out for the young man of energy and ambition determined Mr. Haslam to try his fortunes in this new country. Accordingly he left New Brunswick and after a year or two in Manitoba arrived in British Columbia in 1874 where he became associated with the late John Hendry and David McNair in the Royal City Sawmills at New Westminster. This partnership existed for six or seven years when Mr. Haslam removed to Nanaimo, on Vancouver Island where for many years he successfully operated the Nanaimo Sawmills Co. Ltd. He also represented that city in Provincial Legislature for several years and was a member of the Federal house from 1894 to 1896, being at this time a leading figure in the public life of the Pacific Coast. After retiring from active operation in the lumber manufac-

turing business Mr. Haslam located in Vancouver and organized the log scaling department of the Provincial government, becoming supervisor of that branch of work.

As a result of heavy demands for British Columbia lumber both for export and rail shipment, logging companies are this month swinging into a summer season which, it is predicted, will be the most active for many years. New camps up and down the coast as well as in the interior of the province are opening up and many of the older ones are preparing to nearly double their output.

The demand for loggers has come like a siren call and practically every man who can "swing an axe" is now in the woods. Present production is now well above the average, the estimated value of the monthly cut being over \$2,000,000, and with favorable working condi-

tions and if the forest fires do not hinder production to any serious extent, all logging operations are united in the prediction of a most prosperous and active year in this phase of the lumber industry.

Kenneth Barr, formerly with the Allen-Stoltze Lumber Co., of Vancouver, is now associated with Hanbury Timber Products, Ltd., wholesale lumber dealers of this city.

S. C. Smith, of the Smith Lumber Co. Ltd., Vernon, B. C. was a recent visitor to the coast. He reported conditions good in the interior mills, lumber from his mill being now shipped into the Ontario market in competition with the products of the coast mills. He was strongly of the opinion that lumber prices would hold firm with every indication of a raise in certain grades.

## Timber Industry Jottings from Busy East

In a recent issue of the Royal Gazette published in New Brunswick a proclamation appeared, issued by the Minister of Lands and Mines, under authority of the Forest Act of 1922, in which all forest land in the province is proclaimed "a protected area." As a result any person desiring to go fishing, hunting, etc., must obtain a permit from a fire warden, councillor, game license vendor or other person duly authorized. The certificate secured must be produced when requested by any fire warden or other authorized person. Penalties for non-compliance will not be less than \$10 and not more than \$100, or thirty days in jail. This action is deemed necessary by the government in a determined effort to prevent a repetition of the immense forest fire damage of recent years as a result of carelessness or thoughtlessness of those entering the forest on pleasure expeditions. By having the certificate it is hoped that all those entering the woods will keep in mind the necessity for great care in preserving the forests.

George McKnight, operations manager of the Nashwaak Pulp & Paper Company at the Nashwaak district, has announced that the river will be open soon. It is estimated that there will be about eighteen or nineteen million feet of logs to come out of the Nashwaak this season. The Nashwaak Pulp & Paper Company has fifteen and a half million feet of new logs with a few hundred thousand feet of old lumber. The S. Douglas Lumber Company, Limited, has three million feet, the River Valley Lumber Company has about one million feet, and the Fraser Companies Limited a small amount.

On the Nashwaak River the drives have been under way for some time and there was fear that the water would fall so rapidly that the drives would hang. The drive on the Nashwaaksis was out on the 17th and the first bank of logs arrived at Springhill that same day.

Preparations are being made in mills about St. John for the opening of the season. The St. John river is expected to be open for navigation about the first of May and an opportunity will then be had for the towing of logs from the booms.

Shou Tudo, of Tokyo, passed through St. John recently enroute to Cambridge University. He said that a good business could be done by Canadian lumbermen in exporting lumber to Japan as his people are now building more after the western fashion and Japan could not supply the lumber.

Alfred West, of Coles Island, Queens County, who was in St. John recently said that the heavy snow fall in that section of the province had curtailed the lumber cut on the Canaan River by at least one-third. He also told of the heavy snow driving deer from the forests into the lumber camps where the men cut hardwood brush for them to feed on. The animals were so weakened by lack of food that the men could walk among them and they would hardly move out of their way.

Alexander Barnhill Holly, a member of the firm of James Holly & Sons, prominent lumber surveyors, owners of the South Bay Booms and tug boat operators, died on April 20 after a short illness. He was the son of James Holly, who passed away some twelve years ago and upon whose death the business was taken over by the two brothers, B. Holly and Murray McL. Holly. The business will in future be carried on by the latter. Besides his wife he is survived by his brother and two sisters.

F. C. Beatteay, managing director of Stetson, Cutler & Companies large mills in St. John, recently returned from an extended tour to the continent. During his absence the business was carried on under the supervision of his son Allan C. Beatteay, who is conceded to be one of the cleverest young business men in the lumber industry in these parts.

Chief Forester, G. H. Prince of the Department of Lands and Mines, has returned from Montreal and Quebec, where he held a conference with Chief Forester Piche of Quebec in reference to co-operative policies for the prevention of fires along the provincial borders. He announced that a suitable arrangement had been made.

The following statement has been given out by the St. John consular district, with regards to lumber shipments made to the United States for the quarter ending March 31, 1923. They show a marked improvement over the corresponding period of 1922 and augurs well for the remainder of the season. This report was published by H. S. Culver, American Consul in St. John on April 21:

Rough spruce pulpwood .....	\$ 1,512.00
Rossed spruce pulpwood .....	1,470.00
Peeled spruce pulpwood .....	6,566.00
Peeled poplar pulpwood .....	1,180.00
Spruce lumber .....	191,320.45
Hemlock lumber .....	697.14
Pine .....	14,553.49
Laths .....	389,829.64
Shingles .....	Nil
Cedar lumber .....	175.20
Fir lumber .....	461.45
Wood pulp .....	431,150.40

Total ..... \$1,038,915.77  
Total for corresponding three months of 1922 .. 582,220.10

Many friends in the province heard with regret of the death of Robert Hudson Montgomery, which occurred at his home in New Richmond, Quebec. He had considerable business with lumbermen in all parts of the Maritime Provinces and was highly esteemed by all.

### Canada's Youngest Wholesale Lumberman

Douglas A. Stalker, of Sherbrooke, Que., who carries on an extensive business in spruce, hardwoods and Coast materials, is we believe, the youngest wholesale lumber merchant in Canada. He is only twenty-three years old and has formed a strong connection with the Boston and New York markets and the trade in the Eastern provinces. This season he has bought the output of five mills. Mr. Stalker is a son of A. G. Stalker, who for many years has been superintendent of Williamson & Crombie, Kingsbury, Que. There the subject of this reference was born and, after finishing his education at St. Francis College, Richmond, he decided that he would like to follow the pursuit of lumbering. During the war his father, who was a captain (Reserve) in the 54th Battalion, reverted to the rank of a lieutenant and went overseas with the 171st Quebec Rifles, under the command of Sir William Price. For three years he had charge of No. 27 Company, Canadian Forestry Corps, in its operations in France.

Meanwhile young Stalker, who was then in his teens, was learning the lumber business at home and gained experience in the bush, the mill and the office with Williamson & Crombie. His last position was that of accountant, and his next move was in joining the Fletcher Pulp & Lumber Co., now the Fletcher Corporation, of Sherbrooke. He was yard superintendent and later was engaged on the purchasing and inspecting staff, after which he decided to start out on his own behalf. He has now been going two years and has an office at 122 Wellington St., Sherbrooke. In addition to all lines of lumber, he handles lath and pulpwood, and reports that the prospects of increased business during the coming season are very bright. R. J. Stalker, who is associated with S. P. W. Cooke, of Toronto, is a brother of D. A. Stalker, who recently spent a few days in Toronto on business and called upon a large number of members of the trade.

### Mr. Reid did Some Fishing Down South

John B. Reid, honorary-president of the Ontario Retail Lumber Dealers' Association who, with Mrs. Reid, has been spending the last six months at his winter home in St. Petersburg, Florida, has returned to Toronto. Mr. Reid has a comfortable, attractive residence in the southern city and greatly enjoyed the past season. He is an enthusiastic angler, as everybody knows, and no matter where he may happen to be, his fishing pole is always kept handy. With three friends he recently went on a day's sport in the Gulf of Mexico. The catch which was only an ordinary one, numbered 51 piscatorial prizes.

The accompanying picture shows the result of the expedition which lasted a little over four hours, and the weights of the members of the finny tribe ranged from 6 to 18 lbs. each. Nearly all are king fish but the three large ones seen in the front of the view are known as groopers. They tip the beam at from 12 to 14 lbs.

The winter home at St. Petersburg, Florida, of John B. Reid, Toronto. Above is seen the harvest of a few hours' angling in the Gulf of Mexico. Mr. Reid is the second figure on the left.

each. As a result of the angling jaunt, the party, (two of the members of which were over 80 years of age), landed 47 kings, 3 groopers and 1 mackerel, and had a pleasant time. Mr. Reid says that groopers are as hard as a donkey would be if caught by the tail, but that the kings are the most beautiful-appearing fish one would desire to see when they come out of the water. They have no scales and look exactly as if they were silver-plated. Mr. Reid added that he expected to get in touch with the tarpons next season. These fish weigh from 15 to 50 lbs. each.

During the last days of April, Mr. Reid devoted some of his time to salt water bathing to try and get some of the "fire" out of his face and nose and make these facial features fit for northern society. He also got rid of all his duties as vice-president of the Canadian Club at St. Petersburg which closed its season in March.

In an interview Mr. Reid said,—"We had a grand winter at St. Petersburg, not too hot, much cooler than last. The average temperature was from 70 to 80 degrees all the time with just enough rain to make it right. The greater part of the tourists left for home early in April. There is a heap of building going on in St. Petersburg, structures amounting to about three million dollars being

under way. There are several new hotels getting ready for next season and many other buildings taking shape. Lumber and all builders' supplies in St. Petersburg have gone up twenty to twenty-five per cent since the first of January."

### May Remove Sawmill to Stratford

The Goderich Mfg. Co., Limited, of Goderich, Ont., at the head of which is J. E. Baechler, say that the extensive rebuilding operations which they had intended carrying out, are in abeyance at the present time. The company made a proposition to the council of Goderich to close up certain streets and Maitland Road, stating that if this was done, they would rebuild the burned portion of their plant and also go into the salt business. Mr. Baechler says they have been unable to get the town to do anything in the way of closing the thoroughfares, according to the proposition submitted, and his company are now considering taking their entire sawmill business to Stratford early next fall.

The Goderich Mfg. Co. who ship very many carloads of logs yearly into Goderich, nearly all of which pass through Stratford, say they would save several thousand dollars annually in freight if their cutting up plant was located in the Classic City. Stratford is their nearest western divisional point and has several different branches running into it. The company could bring in logs on all the different lines and have a much shorter haul than they have into Goderich. Not only would the extra freight on the logs coming in be saved, but also a large amount on lumber shipped to the United States and other far-off points.

The company state that the hardwood situation at the present time is very good and inquiries are coming in from many quarters at present. Prices are firm and there may possibly be a further advance until such times as the year's cut is ready for shipment. There does not seem to be a very great demand for No. 3 common in elm and maple but all the No. 2 and No. 3 common in basswood and the upper grades of other hardwoods can be readily disposed of.

### Big Demand for Portable Sawmills

The Brady Machinery Co., Limited, of Traverse City, Mich., report that the prospects in the lumber industry are decidedly bright if operators take advantage of modern machinery. The company, who are manufacturers of portable sawmill equipment, say that it is not profitable under the most favorable conditions, to put a 12 in. log on a big carriage that is built heavy enough for a 48 in. log as it requires a lot of power and two or three men besides the sawyer to operate the latter. When skilled labor is scarce as it now is in Canada, the successful operator should look to the use of modern labor-saving machinery.

In reference to the "Cadillac 404" portable sawmill, which is operated by one man, the Brady Machinery Co. report they are receiving so much correspondence regarding this mill that they would appreciate it if those who desire data concerning it, will state in their first letter the kind and size of logs and other conditions that will assist the firm to quote intelligently regarding their needs. The Brady Machinery Co. ask this to render better service to their customers.

They have recently installed in the Cadillac Veneer Company's plant at Cadillac, Mich., one of the "Cadillac 404" for handling their veneer cores and short logs. The Cadillac Veneer Co. is a progressive concern who believe that all times are good to the man who equips himself or his factory to meet conditions.

### New Chief Inspector is Appointed

Wm. H. Nelson has been appointed to the position of chief inspector of the National Hardwood Lumber Association, of Chicago, to fill the vacancy caused by the resignation of Frank R. Buck. Mr. Nelson has been engaged in the lumber business for the past fifteen years and was selected as a national deputy inspector to assist in the Memphis market five years ago. Subsequently he served in the Cincinnati, Louisville and Nashville districts and was appointed to take charge of the New York City district in the spring of 1922.

It is likely that one or two field assistants will be appointed to aid Mr. Nelson and thus ensure every one of the staff inspectors being brought in close contact with the present official interpretation of National inspection rules. In the official bulletin recently issued by the N.H.L.A. it is stated that this is a new departure and one of its provisions does away with the rule of having one man conduct all re-inspections, as heretofore, and also contemplates more frequent visits to members on the part of the chief inspector or field superintendent or his assistants than have been possible in the past.

The twenty-sixth annual convention of the National Hardwood Lumber Association will be held in Chicago on June 13th, 14th and

15th. The convention headquarters will be at the Congress Hotel, and it is expected that there will be a very large attendance.

The James Shearer Co., Limited, of Montreal, is among those who have recently joined the N.H.L.A.

### Pioneer of Yukon Days Passes Away

One of the most picturesque figures in the history of Canada passed out recently when Col Joe Boyle, a former Woodstock, Ont., resident died in London, England. He was known all over as a Klondyke pioneer of great resource and courage.

The late Col. Boyle was born in Toronto in 1867 but had resided in Woodstock since he was a lad. He had a most spectacular and eventful career. It was in 1891 in the early days of the gold rush to the Klondyke, that Joe Boyle fell in with Frank Slavin, a pugilist, and together they made their way to Dawson City. Things broke badly for the pair in the north country and the colonel was in dire straits. He came out to secure supplies for the starving miners, and while organizing a relief expedition, times brightened and the Woodstock man went to Ottawa and secured large land concessions and went back to try his luck. He worked hard until he made sure he had struck something good and then in order to develop his claims, formed what was known as the "Canadian Klondyke Mining Co."

Col. Boyle was well known in connection with the lumber industry and established the first sawmill in the Klondyke, supplying lumber for the making of sluice boxes for the miners. Before the mill was established he engaged in the whip-sawing of lumber and other crude methods of manufacture. Among those who speak with much interest of those early days is Hugh A. Rose, of Toronto wholesale lumberman, who was then in the Yukon.

During the war Col. Boyle equipped and sent overseas a machine gun battery composed of fifty picked men and thus did splendid service at the front. Following the Armistice, Col. Boyle was appointed an Extraordinary Commissioner for Roumania. During the past year or two he had been engaged with the Royal Dutch and Shell Transport Company in seeking oil concessions and developing oil wells in various parts of the Near East.

### New Retail Yard at Scarboro Junction

The Comrie-Grierson Lumber Co. have opened a retail lumber yard at Scarboro Junction, Ont., and will deal in lumber, lath, shingles, interior trim, doors and builders' supplies. The yard is located on the Grand Trunk main line to Montreal. Suitable buildings have been erected and operations are now in full swing.

R. Comrie, head of the company, has been connected with the lumber industry for many years and has had experience in both the retail and the manufacturing ends. He put in the ground work with a well-known firm of importers on the East coast of Scotland, and since coming to Canada, fourteen years ago, has acquired a wide knowledge of the business in Ontario. For the past six years he has been with the Herman H. Hettler Lumber Co., Midland, as office salesman.

Mr. Comrie's partner, H. U. Grierson, is a lumberman of many years' experience, having been connected with the well-known lumber firms of Gillies Bros., Braeside, and the Herman H. Hettler Lumber Co., Midland. For the past eight years he was yard superintendent at Manley Chew's mill in Midland. The new company starts off with bright prospects and should have a successful career.

### Sir Clifford Sifton on Replacing Forests

That the millions of logs taken from the Canadian forests this spring represent a destruction of "capital" and that the Governments should spend large amounts on restoration without computing costs on an interest basis, is the interesting contention of Sir Clifford Sifton in a letter to the Canadian Forestry Association. "In my judgment the money spent in planting trees should not under any circumstances be regarded as an investment upon which interest, either simple or compound, should be calculated. I regard the cutting down of merchantable trees as a destruction of capital and I would think it was the plain duty of the Government which permits the cutting down of such trees and derives a revenue therefrom, to insist on the replanting of at least two trees for every one cut down and that such cost should be taken out of the forest revenue and regarded as a permanent charge upon that revenue."

### Colonel Greeley Foresees Timber Famine

A "timber famine" already has begun in the United States, and will become worse before it can get better, was the assertion of Colonel W. B. Greeley, Forester of the United States Forest Service,

testifying before the Senate Special Committee, headed by Senator McNary, in Washington a few days ago.

Col. Greeley admitted that his views were not generally shared by lumbermen, but he took the ground that reforestation would be largely a matter of private ownership and business, provided the state gave adequate protection against fire and a system of taxation adapted to the necessary long period of tree growing. Many lumbermen, he said, believe that private capital will not generally undertake reforestation because of the long wait necessary before returns can be realized.

Colonel Greeley said the total of standing merchantable timber is 2,200,000,000,000 board feet, and that the ratio of depletion to regrowth is about four to one. Theoretically, without change in present conditions of regrowth and depletion, American forests will be exhausted in thirty to forty years. Experienced lumbermen, however, ridicule these statements.

While the actual amount of standing timber is still large, though 1,500,000,000,000 below what it should be to balance depletion and new growth, Colonel Greeley maintained that in effect the principal lumber using parts of the country are now suffering from "timber famine," resulting from the high freight rates caused by the long distances of the remaining forests from the consuming centres.

Lumbermen in New York say that except in a few states the timber situation is about the same as it was fifty years ago. Paper-making takes the greater part of the forests, but as Canada supplies the material for this, the United States is not affected to any great extent.

### Best Way to Meet Mail Order Competition

There were two subjects that came up for discussion at a recent retailers convention says C. H. Ketrige, of Evanston, Ill., in the "Mississippi Valley Lumberman." One was, "Should the dealer sell the completed buildings?" and the other, "How shall we finance building operations?" Both of these questions have been forced upon the retail business within the last few years by the mail order concerns that are making of this a special feature that is causing trouble for dealers in some parts of the country. It began to make its appearance some time ago in the form of the ready-cut houses. Now the proposition has developed into selling the house completed and financed as well, if so desired.

The terms on which this financing is done are very alluring to the man with small means and wanting a home of his own, and he pays for it in monthly installments as he would pay to the landlord in form of rent. All the while, he is living in the house. This is pretty hard competition to the average dealer who is not accustomed to anything of the kind. It will probably be some time yet before this competition will become in any way general, but there is a lot of money in this country that is seeking investment and these large mail order concerns can get all they want of it.

It was a matter of news in the daily papers some two months ago that a certain well known life insurance company had appropriated one hundred million dollars to be invested in home building operations. I was informed by a party who knew the facts that apartments were now being built in New York City under the direction of the supervising architect employed by the insurance company, the rental of which would be at a monthly rate of \$9.00 a room. Although my informant did not say so direct, I inferred from his conversation that his concern had a contract for furnishing a certain part of the building supplies. The statement surprised me, and I was careful to be sure of what he said regarding the room rental.

There is no question but that a considerable part of the high rentals being charged for the new apartment buildings is due to the speculative element, and charges for underwriting the transaction. A friend of mine wanted to negotiate a loan for the erection of a commercial building and found that he would have to pay a total interest and charges of 13 per cent for the money.

In one of the sessions last winter, it was suggested by a member that as a portion of the life insurance money came from the country towns, it was no more than reasonable that a part of it should be made available for financing home building in these towns. Of course, this would have to be done through some responsible agency.

The average country town is starving for the need of money wherewith to build homes. Strange to say there is often ample money in the place to do it with, but it is not made available for the purpose. Bank deposits are used for making short time loans and purchasing commercial paper, and this, too, with surplus money of the community. Probably thirty or forty per cent of the people there are paying rent for where they live, this money goes to the landlord and he adds it to the deposits in the bank. The bank loans it out and makes a profit on it, and so the renter is drained of what little he has, with nothing to show for it but some rent receipts.

## News of Lumber Industry in Short Shape

The members of the Montreal Wholesale Lumber Dealers' Association have passed a resolution of sympathy with H. J. Tetreau, of Bock & Tetreau, Limited, on the death of his only sister.

The Provincial Paper Mills, Limited, have sent an invitation to the technical section of the Canadian Pulp and Paper Association to hold their annual midsummer session at Port Arthur. The trip will be by boat and the meeting of the section will be held during the sailing. A very interesting programme is being prepared.

The Porcupine Pulp & Lumber Co., of Hoyle, Ont., has taken out 10,000 cords of wood during the past season. The company, which is a subsidiary of the Cliff Paper Co., of Niagara Falls, N.Y., is engaged entirely in taking out and rossing pulpwood and shipping it to the parent company at Niagara Falls. The Porcupine Company has been in operation since 1917 under the able management of A. C. White.

Fire broke out recently in the planing mill of A. Weller & Co., contractors, 54 Tecumseh St., Toronto, which was burned to the ground. The mill had been closed down for some time on account of repairs to the boilers and was about to resume operations. The good work of the brigade in fighting the blaze from within the building kept the fire from the drying room. The loss on the plant is about \$10,000.

Work has been started on clearing the site for the new paper mill which will be erected on the Winnipeg River about 75 miles north of Winnipeg by John D. McArthur, and his associates. The plant including the Hydro Power, will involve an initial expenditure of about \$4,000,000. The paper mill will have a capacity of 130 tons daily at the outset but it is expected that by 1928 this will be more than doubled.

The capital stock of the Twin Falls Lumber Co. has been increased from \$200,000 to \$600,000. The plant of the company is located at McDougall's Mills, in the Kenora district. The company was incorporated some years ago and Brig. Gen. J. B. McDougall is the president; Sam McDougall, of Ottawa, vice-president; Hamilton J. Stuart, Toronto, secretary; W. C. McDougall, manager, and J. Lorne McDougall, of Ottawa, director.

G. O. Buchanan, of New Westminster, has formed a partnership with J. T. Wilband, of Vancouver, for the purpose of installing a sawmill on the Puckatholatchin Indian Reserve, the timber of which was acquired by Mr. Buchanan several years ago. The reserve is about 85 miles from Vancouver and the mill will have a capacity of 20,000 feet per day, and will employ about 25 men. The timber consists of fir, very suitable for dimension.

The H. G. Holmes Lumber Co., who began business in Timmins, Ont., in January last, are doing exceptionally well. The company of which H. E. Bailey is the manager, are operating a sawmill in Timmins and specialize in spruce and jack pine lumber. They do both a wholesale and retail trade and handle all lines of mining timber. There is a big demand throughout the section for stulls and lagging and all other mining timber such as 8 x 8 and 6 x 4.

James Jardine, a well-known figure in lumber circles in New Brunswick, died recently in Fredericton at the ripe age of seventy-two years. The late Mr. Jardine was the eldest son of Thomas Jardine whose firm, J. & T. Jardine, shipbuilders, flourished a half a century ago. Mr. James Jardine had gathered a wide experience in forest products both in this country and in England, where he spent considerable time with Farnworth & Jardine, timber brokers, at Liverpool.

The Pearce Company, of Marmora, Ont., say they have worked off quite a lot of their hardwood and could sell a great deal more if they had it. Prices for lumber are much better than they were last year and in 1921. Conditions have greatly improved and the outlook is brighter. The cut of the firm will this year be smaller than usual as they did not contract for as much wood last fall, owing to the somewhat uncertain conditions which then prevailed, having a considerable stock on hand.

McGibbon Lumber Co., Limited, of Penetanguishene, Ont., recently built an attractive new office at the corner of Queen & Water Sts., in that town. The location is an admirable one and from the hillside a splendid view of the plant and yards may be obtained. The company are selling their old office building in which they did business for about half a century. The stock of the McGibbon organization this year will be considerably more than last, amounting in all to about 10,000,000 feet, the majority of it being hemlock.

The Ontario Forestry Branch has opened an office at Sault Ste Marie, which is in charge of A. B. Connell, district forester, for the purpose of handling forest fire protection in the Algoma district to better advantage. Mr. Connell was formerly engaged in similar work

in the Sudbury area, and fire protection in the Soo surroundings lately handled from the Sudbury office. With the aim in view of increasing the efficiency and carrying out to better advantage the object of the whole organization in safeguarding timber from flame, the Sault Ste Marie office was established.

## Points to Observe When Ordering Lumber

An Eastern U.S. Lumber firm has formulated several points to observe when ordering lumber. The suggestions are well worth keeping in mind:

1. Consider carefully points you wish to cover in your order.
2. Shippers must be financially responsible, or satisfactory to you by reputation.
3. Terms.
4. Time of shipment, approximately.
5. If orders are given to traveller, have it understood that before his company enters the order, his company mail you an acceptance so worded that you will be mutually agreed on all points.
6. Wire order for transit cars is very dangerous.
7. Consider the terms, grading, method of working, widths and thickness will be according to custom rules at shipping points unless otherwise agreed.
8. Dryness, Air or Kiln-Dried.
9. If Air-Dried, it is best to go by weight, since most trouble will come from South Western Short Leaf, on account of stain, etc.
10. If Kiln-Dried, especially in expensive woods, must be done with modern equipment; case hardened, warped, split, split output won't do.
11. Flooring, ceiling and all worked lumber be sure and agree on percentage of lengths and widths.
12. Thickness, whether rough or dressed, have your shipper note what he intends to ship.
13. Kind of car, rack, box or open car.
14. If high priced material car roof must be tested for leaks.
15. Routing.
16. Discount, amount, when.
17. Mention bundled or loose stock. In flooring and ceiling, how many pieces to bundle.
18. Hemlock, mention grade No. 1, Merchant, or No. 2.
19. Lath, be careful about widths, thickness, and lengths.
20. If lumber is purchased at shipping point, agree on freight rates.
21. Working of flooring, hollow back, planed one side and matched, or planed one side and centre matched.
22. All hardwood flooring must be according to the Hardwood Manufacturers' Association Rules, as regarding grades, percentage of lengths, etc.
23. Do not confuse Coast Stock, especially in roofers and flooring, with South Western, as to the grades and working.

## Shantymen's Christian Association Conference

The annual conference of the Shantymen's Christian Association was held in Knox Church, Spadina Ave., Toronto, on Tuesday, Wednesday and Thursday April 24th, 25th and 26th. Representatives from Kentucky, the Northern States, British Columbia and other parts of Canada were present and much interest was revealed in the proceedings and the good work carried on by the Association which is widening and developing all the time. On Thursday April 26th there were shown lantern slides, illustrating the British Columbia work, while interesting addresses were delivered.

Wm. Henderson, 15 Toronto St., Toronto, is the general superintendent of the Shantymen's Christian Association, and W. H. Adamson of the same address, is general treasurer. Interesting reports were presented on the work of the past year and several missionaries gave the stories of their experiences in Kentucky, British Columbia, Alberta, Manitoba, Saskatchewan, Ontario and the eastern provinces.

## Laboratories Will Identify all Woods

If the average man were asked to identify half a dozen common metals and the same number of common woods he would probably give correct answers as to the former and make mistakes with the woods. Metals are recognized by their color, but woods are distinguished by differences in their structure that are often microscopic. The identification of woods is a matter of some industrial importance, and it is of interest to note that expert service of this kind is provided at the Forest Products Laboratories of Canada (Dominion Forestry Branch), Montreal, where special facilities for the purpose are available.

# Interesting Items Regarding Pioneer Industry

## Brussels Firm is Kept on Move

Ament Bros., of Brussels, Ont., state that they find business very good at the present time, and, while prices are rather low in some lines, they are inclined to stiffen. The firm have started operating their sawmill and have a fair supply of logs on hand.

Ament Bros. have been running their heading mill for the past two months, having been favored with several large orders. They find prices for heading somewhat better. Their stave mill will not be put in operation for a few weeks yet and the cut is not likely to be as large as usual.

In regard to building operations in Brussels, there is not a great deal going on at present outside of repair work and a few small jobs, owing to the increased cost in the price of raw material.

## Tragic Consequences of Forest Fires

"The Ninety and Nine" is the name of a new motion picture which depicts a gigantic forest fire. The climax of the presentation is seen in the rescue by train of the inhabitants of a fire-threatened town, and the production contains a wonderful thrill.

E. J. Zavitz, Provincial Forester of Ontario states that, realizing the adaptability of this picture in showing the results of carelessness by fire, the Department of Lands and Forests has arranged with the Ontario Motion Picture Bureau to supply a short reel on forest protection in Ontario which will be furnished free to any theatre. Over ninety-five per cent of the forest fires are caused by human carelessness and every effort should be made to lesson the tragic consequences of these disasters.

## "Gold Seal" Now on the Canadian Market

The "Gold Seal" rubber footwear, which is widely known throughout the United States, is now being sold and distributed throughout the Dominion. The Canadian sales are under the direction of the Allied Footwear Co. of Canada, who are located at 29 Temperance St., Toronto, and are preparing for an intensive campaign and big business. It is expected that the "Gold Seal" will be received with a large measure of favor in Canada and a representative stock will be carried in the Toronto warehouse of the firm from which all shipments will be promptly made.

The "Gold Seal" has the exclusive rights for the Grippio Sole, which is used on the Ligro shoe and is so strongly praised by lumbermen.

## Backing up Principles of Conservation

A neat booklet has been published by the Concatenated Order of Hoo-Hoo, St. Louis, Mo. The brochure is entitled "Trees," and is published in the interest of conservation and reforestation. The Hoo-Hoo is thus making known its desire to help in the formation and enlightening of public sentiment through such sound and practical principles of a national forestry policy as will contribute to the stability of the lumber industry as one of the foundations of the nation's welfare and prosperity, thus ensuring protection for all standing timber and re-timbering of valuable waste lands so that permanent supplies might be secured. The little booklet, which begins with trees and ends with a home, carries much valuable information.

## National-American Working on Shingle Protest

The National-American Wholesale Lumber Association, through Davies & Jones, Counsel at Washington, is actively co-operating with shingle men in the Pacific northwest, with a view to taking some action suppressing and correcting a report issued by the Building Code Committee of the Department of Commerce. This Committee has made certain proposals regarding Small House Construction, and references are made to wood shingles which are regarded as being incorrect and very unfair.

Several days ago, Secretary Schupner of the National-American, received a joint telegram from several members at Seattle, and the matter was immediately referred to Washington, where Davies & Jones are at work upon the matter. It will be necessary to undertake a complete investigation, and probably arrange for practical fire resisting tests. This the shingle men are prepared to do, and with-

in a short time more definite plans will be announced. In this matter, the National-American will co-operate with the Shingle Branch of the West Coast Lumbermen's Association.

## Lumbering Activities in Sudbury District

D. H. Haight, of Sudbury, spent a few days in Toronto recently and also in Glen's Falls and other points in New York State. Mr. Haight's mill at Mileage 93 on the Canadian National Railways, near Bethnal, was burned to the ground last November and he will not rebuild this season.

Mr. Haight has arranged with Charette & Sons, of Gogama, to cut up his white pine, red pine and jack pine logs which will produce about a million feet. The Hawk Lake Lumber Co. at Monteith, will saw about two million feet of spruce for Mr. Haight.

Charette & Sons' mill at Gogama was wiped out by fire last winter but is being rebuilt at the present time and will be equipped with an up-to-date band saw.

## Montreal Wholesalers in Monthly Session

Members of the Montreal Wholesale Lumber Dealers' Association held their monthly meeting on April 19 at the Mount Royal Hotel, with J. S. Bock in the chair.

It was decided to call a special meeting on May 2 to consider amending the by-laws in order to extend the membership. The suggestion is to admit wholesalers who are not located in Montreal but who do business in the city.

It was agreed to form a Credit Bureau, following a report by the committee appointed to consider this question. The report outlined a plan which is capable of extension. Under the plan it is optionable for a member of the association to join the bureau. The idea of a bureau met with general support, it being pointed that information of the character to be supplied is now generally lacking.

## New Sales Organization is Formed

The Pembroke Lumber Sales Co., Inc., is an organization which has just been formed with E. A. Dunlop, of Pembroke, Ont., as president; A. L. Eastcott, of Pembroke, vice-president, and Stanley Pearce, of New York, secretary-treasurer.

The organization will handle the output of the Pembroke Lumber Co., Limited, of Pembroke, which this season will cut 30,000,000 feet, consisting principally of white pine. The cut will be 50 per cent larger than last year and the mill will be operated night and day during the greater part of the summer.

The Pembroke Sales Co. have opened offices at 2607 Grand Central Terminals, New York City. Mr. Pearce who has been identified for a number of years with spruce and pulp interests, is in charge.

## Canadian Lumbermen Appoint Committees

The following committees have been appointed by the Canadian Lumbermen's Association to serve during the coming year:—

Committee on Legislation:—Messrs. Dan. McLachlin, Arnprior, (Chairman); W. E. Bigwood, Toronto; John Black, Ottawa; John S. Gillies, Braeside; Duncan McLaren, Toronto; D. McLeod, Kenora; Sir Henry K. Egan, Ottawa, and Hon. George Gordon, North Bay.

The Transportation Committee consists of Messrs. Alfred Clark, Toronto, (Chairman); Walter M. Ross, Ottawa; E. C. Barre, Sarnia; D. C. Johnston, Toronto; P. J. McGoldrick, St. Pacome; W. E. Golding, St. John; Rufus E. Dickie, Stewiacke; Frederick Cleveland, Utica, N.Y., and A. O. Anderson, Buckingham, Que.

## Want Anti-Dumping Clause Invoked

A recent despatch from Washington says: Provision of the anti-dumping section of the U. S. tariff law were ordered invoked by the Treasury against importation from the province of Quebec, Canada, of veneers or thin lumber. A ruling by Assistant Secretary Moss said an investigation had disclosed that the Quebec exports to the United States were being sold at prices imperilling the industry south of the border, and that therefore, the heavy duties permissible under the anti-dumping section should be imposed.

### New Pulpwood Concession Being Sold

The Ontario Department of Lands and Forests is calling for tenders which will be received up till June 22, for the right to cut pulpwood and timber on a certain area situated in the watershed of the Trout and Chapleau Rivers in the district of Sudbury, comprising 1,040 square miles.

Tenderers must state the amount per cord for pulpwood that they are prepared to pay as a bonus, in addition to the dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods. Bidders will also be required to say what they are prepared to pay per thousand feet for different classes of timber over and above the upset price, in addition to Crown dues. Red and white pine upset price \$6.00 per M feet, b.m.; spruce (too large for pulpwood) \$5.00 per M feet, b.m.; jack pine \$2.50 per M feet. The Crown dues on pine, including jack pine, are \$2.50 per M feet, and on spruce \$2.00.

The successful tenderer for the Trout-Chapleau limit will be required to erect a mill within the limit at a point to be approved of by the Minister of Lands and Forests and manufacture the wood into kraft pulp and a portion thereof into kraft paper when called upon to do so.

Each tenderer must deposit a marked cheque of \$50,000., which amount will be forfeited in the event of the successful bidder not entering into negotiations to carry out conditions. The \$50,000. shall remain in deposit until the kraft pulp mill is erected and in operation. Any timber cut in the meantime will be subject to the payment of dues. After the pulp mill is put up and in operation, the deposit of \$50,000. may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned, must be paid in the usual manner as returns for the cutting of the wood and timber.

### Contracting for Large Lot of Pulpwood

The Thompson & Heyland Co., Toronto, are contracting for about 50,000 cords of pulpwood for delivery next season. About 20,000 cords of this will be poplar on which prices are a little firmer than last year. The prevailing figure for peeled spruce and balsam north of North Bay is \$8 to \$10 per cord, f.o.b. cars and for poplar \$4.50 and \$5.50 per cord. South of North Bay peeled spruce and balsam is commanding \$11 and \$12 per cord, f.o.b. cars and peeled poplar \$7.50 to \$8.50 per cord. These contracts have been mostly made with settlers who will begin cutting toward the end of the present month and continue until August.

The Thompson & Heyland Lumber Co. have shipped out all the pulpwood contracted for last season with the exception of a few thousand cords which are going forward rapidly to various points in Pennsylvania, New York State and the Niagara district.

### Low Water Causes Heavy Losses

A financial loss which will run into thousands of dollars has been sustained this winter by John R. Booth, Limited, of Ottawa, and the E. B. Eddy Company, Hull, Que., paper manufacturers at the Chaudiere, due to the low level of the Ottawa River, which prevented a sufficient head of water arriving at the mills to operate large grinders.

In the case of the Eddy Company, this plant was forced to go out in the open market and buy groundwood pulp, paying in some instances as high as \$54 per ton. Usually the company manufactures its own groundwood. The Booth organization also had to buy its groundwood pulp.

At the Booth plant visitors to the Chaudiere district are treated to a spectacle they have not beheld for years, being the hundreds of piles of pulpwood, ranging into the tens of thousands of cords which the company contracted for, for its winter operations, but which the organization has been unable to use in its grinders on account of the low water.

The Booth Company simply had its contracts let for winter wood, which was shipped from the bush by rail to the mills. In other years the company used this wood to make groundwood pulp in connection with the operation of its paper mill. This season, how-

ever, the water was so low that the grinders could not be run and the company, unable to refuse the shipment it had contracted for, had nothing else to do but pile it up all around the plant, making a forest of piles which covered acres.

Both C. Jackson Booth and George H. Millen, president of the Eddy Company, while declining to estimate the loss to their plants, said that it would be considerable.

During the latter part of April the level of the Ottawa River began to ascend and Mr. Booth was able to get his grinders going and begin to consume some of his winter wood.

### Glengarry Pulp Co. is Now Operating

The Cornwall Pulp & Paper Co., of Cornwall, Ont., was established some years ago by Canadian and Buffalo capitalists, and bought the woodworking plant of L. A. Ross on the Cornwall Canal near where it discharges into the River St. Lawrence. The old building was remodelled to suit the new conditions and equipped with modern machinery for the production of groundwood under the management of E. E. Emigh.

Owing to unsatisfactory conditions in the pulp market and other causes, the concern last year went into liquidation and was bought by W. W. Thomson, of Toronto. The plant was thoroughly overhauled and now operations are being conducted under the name of the Glengarry Pulp Co. There are four grinders with cutting-up and barking machinery, and the output of groundwood pulp is about 30 tons daily. The plant is run by electric power and about 30 cords of spruce pulpwood are consumed each day. At present the wood is being obtained from the Parry Sound district. It comes in by rail and is delivered by the Stormont Electric Light & Power Company's switches into the mill yard, being run in from the street railway tracks. The manufactured pulp is loaded on to cars on a switch alongside of the mill. The company turns out the highest grade of groundwood pulp and a large portion of the product is shipped to the United States.

Cornwall is exceptionally well located for a pulp and paper industry, having three railways and water communication during the season of navigation. It is expected that a dock will be provided to receive shipments of wood by water and for outgoing shipments of the finished product, as the Cornwall Canal is within a few feet of the mill. W. W. Thomson is the head of the Glengarry Pulp Co.; C. J. Shephard, of Toronto, is the manager, and E. E. Emigh is the superintendent.

### North Vancouver Will Get Pulp Mill

It is likely that North Vancouver will have a large pulp and paper mill. It is reported that plans are under way for an enterprise to cost \$8,000,000 and are nearing completion in the offices of the Seaman Paper Company of Chicago. The company is already interested in the British Columbia paper industry through its president, who was for years a director of the Whalen Pulp & Paper Co.

### Abitibi Company Breaks All Records

The Abitibi Power & Paper Co., who for some months have been gradually increasing production at Iroquois Falls, topped all records last week when the output of newsprint from the company's machines reached half a ton over 500 tons in a day. Since the three machines were installed almost two years ago, they have gradually been creeping up in speed and production until this winter they practically reached capacity. Owing to the necessity of conserving water for power purposes, production had to be sacrificed and the 500 ton point could not be reached. As there is now a break-up of the ice and snow, there is an ample flow of water.

It is stated that negotiations, which have been going on for some time for a power site on the Abitibi River by the Hollinger Mines and the Abitibi Company, have been passed upon by the Ontario Government. The Hollinger Mines will get the power site at the Long Sault and will be allowed to develop the maximum capacity

of 25,000 h.p. instead of 18,000 h.p. which the Abitibi Company wanted named as a limit. It is said that the Abitibi Company will be assured a site for development at carrying places, farther down the stream should the necessity arise.

### Brompton Company is in Good Shape

The directors of the Brompton Pulp & Paper Co. held their regular monthly meeting recently in Montreal and declared a quarter's dividend for the period ending January 31st 1922 of 2 per cent on the preferred stock. In taking this action they pointed out that it is anticipated that further payments of this kind will be made before long, but that just at the present time, which is the peak of the lumbering operations, and requires a very large amount of cash to finance, it was considered the part of conservatism to make no greater distribution. It was pointed out by the directors that this peak period of cash requirement for lumbering operations will be finished in the course of the next thirty days.

"Business is very good," says a statement given out by the directors, "and all our mills are running to capacity and the sales for the last month were the largest since the boom period of three years ago."

### Why Canada Should Stop Wood Export

Volume 1 has been issued on "Why Canada Should Prohibit the Export of Unmanufactured Wood." The book contains 175 pages and in it are presented many arguments in favor of prohibiting the export of unmanufactured wood from the Dominion. There is also a varied and graphic pen picture of forest conditions from British Columbia to Cape Breton. The publication has been issued for free distribution by Frank J. D. Barnjum, of Montreal, in the interest of forest conservation.

In a recent \$2,000 prize competition conducted by Mr. Barnjum, 549 essays were sent in from every province of the Dominion. These contain many unanswerable arguments in favor of an embargo on pulpwood. In the first volume, Mr. Barnjum says only the prize-winning essays are given in the numerical order of their standing. Those, which follow, have not been given precedence according to merit and their arrangement is not intended to indicate any special rank.

The first prize in the contest was captured by J. R. Black, 33 Broadway Ave., Ottawa, and the second prize, James R. Dixon, Dominion Forestry Branch, Ottawa.

### Will Stop Sunday Work in Quebec

It is reported that Catholic labor and social organizations in Quebec intend making a concerted drive to put an end to Sunday labor in that province. It is proposed to secure the endorsement of the Lord's Day Act, and among the trades which have been cited as being operated on a large scale in constant contravention to the statute is the pulp and paper industry. The Provincial Government will be urged to appoint inspectors to see the law is observed, and, failing this, the Catholic Associations plan to institute legal proceedings in order to achieve the desired results.

### Great Lakes Co. Gets Power Contract

The cities of Port Arthur and Fort William are in a wrangle over which shall secure the new mill of the Great Lakes Pulp & Paper Co., the head of which is L. R. Alstead, of Port Arthur. Fort William and Port Arthur are combatting to get the company to locate within their boundaries.

The private Bills Committee of the Ontario Legislature recently accorded permission to Port Arthur to dispose of 75 acres of industrial lands on the Strathcona site to the municipality of Shuniah, on which Port Arthur representatives hope to have the Great Lakes Pulp & Paper Co. establish their plant.

The Great Lakes Company has at last come to an understanding in the matter of power and has signed an agreement to become consumers of the Nipigon Hydro system. The new arrangement provides for an annual sale to the company of 10,000 h.p. of electrical energy, and the figure named is \$18 per h.p.

### Coming to Front as Pulp Province

British Columbia is rapidly coming to the front as a pulp and paper producing province, and it is expected within the next two years that about \$10,000,000 will be expended in new enterprises providing certain negotiations that are now under way are successful-

ly carried out. Many American capitalists are interested in the project.

It is reported that certain New York newspapers are behind negotiations now going on for the acquisition of the holdings of the Prince Rupert Pulp & Paper Co. at Prince Rupert. The founder of the enterprise, John S. Emerson, died some time ago and since then efforts have been made to dispose of the mill and timber. Seven billion feet of pulpwood is available in that section, which would be sufficient to meet the needs of the syndicate for an indefinite period. Most of the timber is located in the valleys of the Skeena and Kispiox Rivers, and if the deal goes through, it will involve an expenditure of between \$5,000,000 and \$6,000,000, and the undertaking will duplicate in a general way the plan of a Chicago newspaper alliance which is behind the pulp and paper enterprise at Elko in the Kootenay district, known as the Wigwam Pulp & Paper Co.

### How Measurement of Pulpwood Differs

During the discussion at the annual meeting of the technical section of the Canadian Pulp and Paper Association, Mr. C. B. Thorne, of the Riordon Company, Limited, presented a chart showing how the diameter of pulpwood logs influenced the solid wood based on board feet measure. Mr. Thorne stated:—

"In the past we bought pulpwood by the cord or by board feet measure without taking much into consideration the correctness of the measurements and the value of the wood as raw material for pulp and paper making.

"Sometime ago I wanted to find out the correctness of measuring wood by the cord measure and appointed a technical man to represent the mill and a woodsman to represent the woods department to find out the number of cubic feet of solid wood contained in any cord of wood. On going over the results of this measurement I found that the variation of solid wood contained in a cord of piled 4-ft. wood was as high as 20 per cent. This indicates that the cord measure is not exact enough.

The accompanying chart shows the number of cubic feet of solid

wood which would be received in 1,000 board feet measure of logs of different diameters. From this it will be noticed that:

1,000 ft. board measure of 4" logs contains 296 cu. ft. solid wood  
1,000 ft. board measure of 6" logs contains 247 cu. ft. solid wood  
1,000 ft. board measure of 8" logs contains 209 cu. ft. solid wood  
1,000 ft. board measure of 10" logs contains 172 cu. ft. solid wood  
1,000 ft. board measure of 12" logs contains 177 cu. ft. solid wood  
1,000 ft. board measure of 14" logs contains 158 cu. ft. solid wood  
1,000 ft. board measure of 16" logs contains 153 cu. ft. solid wood  
1,000 ft. board measure of 18" logs contains 144 cu. ft. solid wood  
1,000 ft. board measure of 20" logs contains 134 cu. ft. solid wood  
1,000 ft. board measure of 22" logs contains 130 cu. ft. solid wood  
1,000 ft. board measure of 24" logs contains 127 cu. ft. solid wood

This means that if you buy 1,000 board measure of 4" logs you will get pretty nearly 300 cubic feet of solid wood but that the cubic contents of solid wood decreases with the larger diameter logs.

In 1,000 feet board measure of 4" logs you get more than twice as much wood as you get in 1,000 feet board measure of 24" diameter logs, which means that the board feet measure is of no value when measuring wood for pulp making. The board feet measure has been installed in the Province of Quebec for the purpose of measuring wood in connection with the payment of Government stumpage on saw logs.

Circular Sawmill, Building and Machinery, Steam Feed, suitable for Ties and Lumber.

### also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

### For Sale

Timber Berth No. 200 in the Township of Moira on the North shore of Lake Huron containing 34½ square miles more or less. The limit contains mainly white pine, there is also a large quantity of spruce, cedar, birch and hemlock. A list of supplies on hand and equipment may be seen at the depot. A complete logging and driving outfit consisting of sleighs, boats, two gasoline launches, thirty-four horses, etc. Tenders will be received by Fraser & Co., 74 Nepean St., Ottawa, up to the 10th of May 1923. Further particulars may be had on application. 5-9

### FOR SALE—MILL AND TIMBER IN WEST KOOTENAY, B.C.

To close an estate we offer for sale 3,708 acres of timber, virgin forest, consisting of cedar, pine, hemlock, spruce and fir estimated at 93,000,000 feet (logs), 100,000 telephone poles and 500,000 split fence posts, together with mill, yards, office building and cottages. The mill is situated at Koch's Siding and the timber is on the Little Slokan River, about 6 miles distant. Transportation is all that could be desired. The entire property can be purchased at a reasonable figure. We desire inspection and offer. Terms will be granted to responsible parties, and for particulars communicate with the BANK OF MONTREAL, New Denver, B.C. 9-12

## Pulpwood Limit

We have for sale licenses on two townships of about 72 square miles between Parry Sound and Sudbury. The timber on these townships is mostly poplar pulpwood and is exportable to the United States. Also there is a large quantity of other timber, spruce and balsam pulpwood, jack pine ties, elm, oak, etc.

The longest haul to the railroad would be about six miles and the average around three miles.

For further particulars apply to

Mulholland and Company  
23 Jordan Street, Toronto, Ont.

6-9

## FOR SALE

SAW MILL—Parry Sound District capacity 15 to 18 thousand daily, most complete and up to date equipment, Waterous Carriage—live rolls — Edger — Trimmer—3 high lumber Cars—Trucks, Wagons, Sleighs, Horses —situated on lake and within ¼-mile of C.N. Railway siding into property—loading platform—on 500 acres land, 100 cleared, balance good cordwood—excellent timber district. Camp has four small dwellings, one large boarding house, 2 sleep camps, stable blacksmith shop, ice house, stove house. Will be sold at a sacrifice for cash, or will consider part cash and part productive real estate Box 236, Canada Lumberman, Toronto. 9

## TENDERS FOR PULPWOOD AND TIMBER LIMIT

Tenders will be received by the undersigned up to and including the 22nd day of June, 1923, for the right to cut pulpwood and timber on a certain area situated in the watershed of the Trout and Chapleau rivers in the district of Sudbury, comprising an area of 1,049 square miles.

Tenderers shall state the amount per cord on pulpwood that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for Spruce and 40 cents per cord for other pulpwoods, or such other rates as may from time to time be fixed by the lieutenant-governor-in-council, for the right to operate a pulp Kraft mill and a paper mill.

Tenderers shall also be required to say what they are prepared to pay, per thousand feet board measure, for the following classes of timber, over and above the upset prices in addition to crown dues:

Red and white pine, upset price, \$6.00 per M. ft. B.M.

Spruce (too large for pulpwood), \$5.00 per M. ft. B.M.

Jackpine (banksian), \$2.50 per M. ft. B.M.

The crown dues on pine including Jackpine being \$2.50 and on Spruce \$2.00 per M. ft. B.M. or such other rates as may from time to time be fixed by the lieutenant-governor-in-council.

The successful tenderer shall be required to erect a mill or mills within the limit or at some point in Ontario approved by the minister, and to manufacture the wood into Kraft pulp, and also such portion thereof into Kraft paper when required so to do.

Parties making tender will be required to deposit with their tender a marked check payable to the honorable the treasurer of the Province of Ontario, for fifty thousand dollars (\$50,000.00) which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said (\$50,000.00) shall remain on deposit until the Kraft pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of \$50,000.00 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelopes and marked plainly on outside "Tender for Trout-Chapleau Pulp and Timber Limit."

BENJAH BOWMAN,  
Minister of Lands and Forests.  
Toronto, April 16th, 1923.

N.B.—No unauthorized publication of this notice will be paid for. 9-12

## The Canadian Land and Immigration Company of Haliburton, Limited

This Company owns in fee simple over 300,000 acres of timber lands in Central Ontario. These lands are well timbered with Spruce, Balsam, Hemlock, Basswood, Birch, Maple, Ash and Cedar and considerable Pine.

The timber on this property will be sold in blocks of from 10,000 to 50,000 acres with a reasonable time to take same off. Or the land and timber will be sold together.

There are two Railroads running into the property, one into the Southwest corner and the other into the Southeast corner.

This territory is so well interspersed with lakes and rivers that the cost of getting out the timber is comparatively small.

As the property is held in fee simple there are no Government dues or restrictions as to manufacture, therefore, anything cut on the property can be exported in its raw state.

Maps and plans and further particulars will be given on application to the undersigned.

W. H. LOCKHART GORDON,  
Managing Director,  
79 Adelaide Street East,  
Toronto.

## Exodus of Canadian Labor to United States Reported

There is a big exodus of skilled workers from Montreal to American centres, and this also applies to semi-skilled labor. It is beyond dispute that there has been a very large exodus of these workers, although it is impossible to give actual figures. There seems to be a deep-seated feeling among the workers of Canada that they are not getting an "even break." There is the feeling that much might have been done to stabilize things for them, which has not been done, and it is these things left undone, as well as the happenings of the last four years, which has culminated in the widespread exodus of workers from Canada.

Wages, of course, are much lower in Canada than in the United States, in almost every branch of industry, while the cost of living here is higher than in the United States. In some parts of the United States plasterers and bricklayers are getting very high

wages and large numbers of workers in these trades are leaving Montreal almost daily. This is causing a rise in wages offering here, and tile setters are now getting as high as \$2.50 per hour.

## The Egyptian Lumber Market

Egypt imports many millions of feet of small hewn poles to be used in the construction of native huts, and there seems to be an opportunity for the disposal of low-grade material from this country. The present sources of supply of this stock have been Northern and Eastern Europe. Finland is a large supplier, shipping about 50,000,000 feet of such stock in 1913. It is not believed that this exportation can be continued on a large scale, because such timber has largely been cut from young trees, and this is being prevented by law. On the other hand, in various parts of Canada enormous quantities of top logs are left in the forests because it has not paid to take them to the sawmills.

The timber used goes under the name of Egyptian balks. The dimensions are: 3x3, 3x4, 4x4, and 4x5. The lengths run from 15 to 25 feet, but 25-foot lengths are rare. Resinous woods are generally preferred. The stock is hewn on all four sides, but may have a wane from the top extending along the length of the tim-

ber. At the butt and at the middle, the timber must hold the required measurements.

The quality is inferior to other kinds of hewn timber and the consumers are not particular in regard to number of knots, discoloration, crooks and other defects. It must be remembered that this material goes into the construction of very cheap native huts. It can, therefore, not be compared with the usual grade of building construction timber in Canada. Even a small amount of rot is tolerated. The present price paid for this stock landed in Alexandria, Egypt, is about \$34 per thousand feet (based on measurements taken at the middle).

## Board is Combating Popular Errors About Building Costs

A survey has been made by the Cleveland Board of Lumber Dealers as to the high cost of building. The survey shows the difference of cost between March of 1920, when prices were at their highest, and March of 1923. In 1920 the cost of 17,500 feet of lumber entering into a house was \$2,023. In 1923 the same amount of lumber cost \$1,370, showing a decrease in price of about 30 per cent in three years. Further figures are being prepared by the board.

# "Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

# Review of Current Trade Conditions

## Montreal Reports that Prices Show Ascendancy

In Montreal the demand for almost every line of lumber remains good, with prices showing a still higher tendency. There is, in fact, a danger of the advance being overdone, although wholesalers as a rule express decided opinions against running up values much higher. They fear that this will stop consumption and cause a strong reaction and heavy losses. Conditions are not without their pitfalls. Prospects appear excellent but they may rapidly change if prices are put up to a level which will discourage buying.

Nor is this danger confined to Canada. The higher levels have been secured mainly because of the demand from the United States, which continues to be very brisk owing to active building there. We know that under this building revival prices of builders' supplies, and especially of labor, have substantially increased. This involves a large addition to building costs, and if these continue to gain, there is likely to be a check to the constructional programme, which in its turn, will be reflected in a drop in the call for Canadian lumber. This will, of course, chiefly apply to the softwoods.

Montreal retailers, as a class, are not stocking up. They are rather afraid of being caught with heavy supplies and prefer to buy for immediate requirements only, taking a chance as to further advances. Although some retailers are rather sceptical as to building prospects, there appears to be little ground for their opinions. There is every chance that building will be active from now on, a large number of projects having already been let. The most extensive apartment house in Canada has been commenced; several schools are planned and additional office buildings are to be erected. There is a possibility that skilled labor will be scarce, owing to the large number of men going to the United States, attracted by high wages, rates which cannot be paid in Canada. It is pretty certain, however, that there will be a general advance in Montreal.

There is a fair amount of activity in the sash and door and interior woodworking plants. The hardwood section remains as firm as ever. There is no let-up in the buying and there is no difficulty in disposing of desirable stocks. Lath is a strong market. The mills are holding for good prices with a satisfactory demand.

Navigation will open on May 5th but indications are that shipments to the United Kingdom will not be on a large scale during the early part of the season. The prospects for spruce are stated to be not bright owing to the low prices at which Scandinavian wood is selling as compared with Canadian lumber.

## Conditions in Ottawa Lumber Market are Brisk

Conditions in the Ottawa lumber market during the closing part of April showed a decided improvement as to the volume of business done, and the outlook for the future brightened. Prices remained absolutely firm. In some quarters it was believed that the new price list of the manufacturers was too high for some grades? Red pine and some grades of mill run spruce advanced.

Taken all around the situation appeared good, and even if a slight drop is eventually noted in the new prices of the manufacturers, the volume of business promising would warrant, at least, a fair profit, if the stocks in demand were to be had.

For once in many months trading with the United States yards and with the Canadian yards was reported as being good. Dry stocks in the manufacturers' hands were reported to the correspondent of the "Canada Lumberman" to have been practically exhausted and orders were still coming in. In many circles of the trade it was declared that practically all dry stocks in the hands of the manufacturers had been bought up.

Orders came in freely from the United States yards and there was also a noticeable improvement in domestic requisitions. The demand from the United States was for practically all grades of spruce and pine. Retail yards were reported to becoming well stocked to take care of the spring trade.

Railway cars were fairly plentiful, but the operation of old embargoes particularly on the New Haven and New Hartford Railway, tended to hold up several shipments. Labor was said to be plentiful both for woods and sawmill operations.

With the woodworking factories which reported they are not yet particularly busy, the labor situation is somewhat uncertain, as the sash, door, cabinet and interior wood finishers have put in a demand for a new agreement calling for an increase of twenty per

cent over last year's rates. Eleven firms and about three hundred men are effected. The men, though they are asking for increased wages state they are willing to work nine hours per day or a 50 hour week. Wages at present run from 35 to 50 cents per hour. The last increase was in May 1920 following the memorable woodworkers strike. The new agreement sought is to be operative from May 1st.

With the woodworking factories being only fairly busy, it was intimated to the correspondent of the "Canada Lumberman" that there would not likely be any substantial advance made in wages, if any.

One or two of the larger factories to give employment to their men during the winter months manufactured reserve stock, which due to the cold weather, has not moved as the spring so far has been a backward one for the actual undertaking of new building. Very few excavations for new homes or business establishments have been started at Ottawa on account of the cold weather. It is expected at Ottawa that it will be around May 15th, before building this year gets properly under way.

The volume of new building up to the time of writing is greater than that during the same period of 1922. Among some of the big undertakings is the erection of the Ottawa Auditorium, a new bank of Nova Scotia on Sparks street, a new nurses home costing \$500,000 in the Civic Hospital, the erection of the new Stevens Estate block at the corner of Bank and Sparks street, as well as a large number of lesser operations and many residential projects.

While the situation from the sales end was good and was daily growing brighter the conditions in the woods camps grew worse, with some companies. This was due largely to the delayed arrival of spring weather, and heavy falls of snow, which tied up, in several instances logging operations. In the Kippawa district 22 inches of snow was reported to have fallen during the week end commencing April 14th.

The late arrival of spring and the heavy snow and ice conditions will mean a late start of the sawmills throughout the Ottawa Valley. Few of the Ottawa plants expect to open much before May 15, unless a warm spell suddenly arrives or they have logs on hand at the mill.

The general opinion expressed by members of the trade is that the outlook is good for a fair volume of business this year.

A helpful sign in connection with the building situation is the prediction made by members of the Ottawa branch of the Canadian Building and Construction Industries Association, that there would be no strike among the ranks of the building trade this year. The contractors had signed new agreements with the bricklayers and carpenters. The bricklayers are to receive \$1 per hour, an advance of 15 cents per hour over last year's rate. The carpenters get 75 cents this year, an increase of 5 cents per hour over 1922 wages. The building laborers have signed up at 45 cents per hour which is last year's wage. The plumbers have a two year agreement at 85 cents per hour. The stonemasons have been offered \$1 per hour and will likely accept. The members of the electrical workers union, and the sheet metal workers union, are negotiating for new agreements.

## Business in Ontario Picks up With Fine Spring Days

Business in the lumber line in Ontario has been very fair during the past two weeks. The number of inquiries continue active, dry stock is getting scarcer, prices on some lines are rising and delivery service has greatly improved. The cold weather during the middle of April held up building operations and caused trade to stagnate to a large extent, but with the advent of warmer days, a more optimistic feeling prevails and everything is looking brighter and better.

The lumber business is maintaining its stride generally and the influence of the building situation is, probably, the most poignant of all lines of lumber consumption. The number of permits issued in the larger cities keeps up well and there is a strong demand for softwoods of all kinds, while hardwood flooring and interior trim plants are well employed. Business with the rural yards has not been any too brisk as yet owing to the lateness of the season and the fact that most dealers have plenty of material and are not disposed to buy more until the footage on hand is reduced.

The majority of sawmills expect to get under way early this month. The heavy fall of snow in the north and the thick ice in the lakes is rather late in disappearing; in fact much later than

## ***“On Time” Delivery***

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

***“Rush Orders Rushed”***

# **Cleveland-Sarnia Sawmills Co., Limited**

**SARNIA, ONTARIO**

B. P. BOLE, Pres.   F. H. GOFF, Vice-Pres.   E. C. BARRE, Gen. Mgr.   W. A. SAURWEIN, Ass't. Mgr.

usual, but the recent warm days have cleared the way for the early resumption of activities in the lumber arena. The cut this season will be an unusually large one and some plants that have not been in operation for years, will be running once more.

There is no fear but that the retail lumber prices and business will keep up until the end of June or July but after that there is some doubt and many predictions are made with respect to prices. Some declare that there will be a recession in values and others state that quotations will pretty well hold their own. Nobody is in a position to prognosticate with any degree of certainty. Generally speaking, prices are about the same level that they have been.

Eastern representatives of Coast mills report that there is a good demand at the present time for wide and long joists, such as 2 x 12, 2 x 14, 2 x 18, 2 x 20. Rough clears, and all lines of B.C. uppers are having a good call at present, but there is no volume buying and the principal sales are mixed car lots. There is a slightly improved demand for western white pine.

It is reported from the Coast that fir logs are too high to leave any profit for manufacturers and the export trade is particularly active.

Lath are still very scarce and high in price. There is a very good demand for mill run jack pine lath which are commanding \$9.00 to \$9.50 at the mill.

In the matter of hardwoods, prices seem to be pretty well established and there have been no radical changes in the last few weeks. The amount of business being placed is fair, dry stocks are exceptionally hard to get but shipments are going forward in a very satisfactory manner. Some wholesalers report that the demand has got down into the lower grades of hardwood which can be marketed with a little more ease than formerly. There is one thing certain that low grades never will be satisfactory on the present basis. Handling No. 3 is a little more satisfactory than it was a while ago.

In a recent interview with an eastern representative of a British Columbia lumber firm he stated that advices from the Coast were to the effect that there is no weakening on the part of the Douglas fir market. Strength and activity continue to prevail. The mills are all busy, some of them running both day and night and working on export business. Hemlock logs are also considerably cheaper than fir logs, the former costing around \$14. Several Atlantic shipments are netting the mills about \$25 with \$29 for the smaller sizes. He stated that fir logs are still too high to allow much margin for the average Coast mill. Several big orders have loomed up on the horizon. The new C.P.R. pier at Vancouver will need 4,000,000 feet of Douglas fir and the drydock will take about 5,000,000 feet. Everything points to continued good business on the part of the Coast mills. There is no indication whatever that the market will show any signs of weakness for several months.

### St. John Reports Good Demand and Better Shipments

According to reports from leading lumber shippers in St. John the demand for laths has been exceptionally heavy and from present indications will continue to be so for some time to come. So great has been the call that the price has advanced approximately fifty cents in the last few weeks. Shipments to New York as well as to points in New England have exceeded all expectations and the outlook is bright for a continuance of large orders in this particular line.

The lumber situation in general throughout the Maritime Provinces has been benefited by the removal of the embargo on C.P.R. cars going through the United States and to foreign cars coming here. At the present time there are a large number on hand and shippers are taking advantage of this to send forward to all points in the Eastern States belated shipments.

Nearly every lumber shipment from the port of St. John for some time past has been for some point in the United States, overseas cargoes having dropped off, at least, temporary.

One large shipper speaking about the trade said that the New England demand for laths, shingles and lumber of all kinds seemed to be much better than from any other points, and that the greatest point of activity centered there.

With reference to other places in the United States, he added that the spring has been so backward that spruce shipments have not been quite so heavy as anticipated, but it is expected that in the near future a revival will take place. This, he believes, will be due to the large amount of anticipated building operations, which will necessitate large quantities of lumber of all sizes and result in a greater demand.

There was some indication here that the price of spruce would fall off a little in New York, but this is attributed to the fact that building operations had been delayed by unseasonable weather con-

ditions and shippers are confident that in the near future it will steady and become stronger.

The labor question is still more or less of a problem and, while not at all serious, is apt to cause some manufacturers worry. Skilled workmen continue to leave these parts for points in the United States where they are being attracted by large wages. While it is not difficult to procure ordinary workmen for general work about mills there are some positions hard to fill and the loss of good reliable men would be bound to more or less cripple the trade. As mills in and about St. John will be operating soon it is hoped to keep these valued employees at home.

### Quebec Reports Better Outlook in Export Trade

The representative salesmen of the Quebec lumber firms, who proceeded to the United Kingdom at the end of January last, are due to return to Quebec at the end of the present month. The latest reports received from these salesmen by their respective firms are more encouraging than their previous reports. They announce that while they did not meet with the success they anticipated before sailing from Canada, they managed to equal the business of 1922.

One of the disappointments they encountered was in Ireland. In this country, especially in the north, they expected to secure a good business but practically did not effect a sale. This condition in the north of Ireland is due to the United States Fordney Bill which has the effect of greatly curtailing the low grades in the cotton industry, the staple trade in the north of Ireland, and naturally has affected all other channels of business activities, especially construction and, in consequence, the lumber trade.

Business in the South of Ireland being at a standstill, the Quebec lumber representatives did not venture into the Free State country, though they judged from reports and indications of their own visualization that the rebellion was gradually drawing to a finish and a total collapse of the opposition to the Free state Government likely in the course of a few months. When the business in the south takes on a new lease of life and construction a veritable boom awaits the lumber interests.

A review of the latest reports received by the Quebec firms from both their representatives and permanent agents in the British Isles discuss the doubts as to the early future of the cotton trade and the prices which are paralyzing operations, but no such description refers to the timber market; nevertheless in the timber arena there is some analogy to these conditions. Goods on the spot are cheaper substantially than new imports and the uncertainty of future prices which has hitherto been a matter of anxiety to British importers, is causing them to review the position frequently with the greatest caution. Many firms have been waiting instead of buying in the hope that the political position would become clearer, that economic developments would throw some light on the purchasing power of other countries and that trade in great Britain would begin to expand. But these chances are slow and when they do come, will be dramatic and may enlighten the trade that it was in all probability too cautious.

In the meantime there is continual spirit of optimism. The British public feel the Ruhr difficulty cannot last many months longer, that the strain on Germany is too great and the tension must give sooner or later. But still the possibility of a new war obsesses the minds of an important section of the financial interests to prevent a freer circulation of money. This, with the threat of the labor unions engaged in the building trade, is a factor which embargoes business in general, including the importing powers of the lumber trade. However, most firms in the timber arena in the United Kingdom look more hopefully on the position of things than they did a couple of months ago and the various agencies of the Quebec firms in the British Isles report that the situation will improve. They expect to be able to cable orders in June to offset the prevailing conditions that will give the Canadian wood interests a larger share of trade than they had in 1922 which exceeded that of 1921.

The general feeling in the market at the beginning of April was that the position was much better than it was in January owing to better prospects for the negotiations for the settlement of the reparation question which had and is improving the value of the French franc, and recognition of the French action which is bringing nearer the spirit of compromise. The British timber interests closely associated with the banking interests of the United Kingdom who have their agencies in every section of Europe, are also more hopeful from the fact that they have reports through the medium of those banking agencies that all nations are now ready and anxious to return to normal conditions. The Ruhr and reparation question has been at the root of almost all the uneasiness in the present time, and immediately when it is seen and recognized that a more tolerant spirit seems in the ascendant, the foreign exchange which acts as a barometer of the temperature and health of Europe will lead to a reaction that will

quickly restore confidence and tend to a reorganization of the world. There is no question about the need of wood. The doubt is as to the means of payment and during April there have been indications that he position in this regard, especially in France, was becoming easier.

In the meantime British importers have pointed to the Canadian sellers the low landed values of wood and the impossibility of seeing a profit in importing. They have referred also to the low consumption and the difficulty they have had in getting their customers to recognize the rising market. However, taking a telescopic view of the position as it has been and is up to the middle of April, at the same time considering all outstanding viewpoints, the market is growing and will continue to grow. The prospects of the powers getting together in confidence regarding a settlement of the reparation question between Germany and France will be assuredly helpful, and the chances in this connection seem to be unmistakably evident and likely to culminate in a mutual agreement in June, when it will be advisable to have the Canadian lumber interests again send their selling representatives to the British Isles to secure a decidedly big fall trade.

The Canadian lumberman have been complaining from time to time that the British timber and lumber trade journals have not dealt fairly with the Canadian trade in their publications; in fact, ignored the Canadian wood interests while they devote pages of space in their trade journals to Finnish, Swedish and other foreign lumber interests. This complaint was especially made on account of the efforts put forth advocating trade dealings with the Empire which appeals these days to every British subject. The resolution adopted at the annual convention of Canadian lumbermen held at Montreal in January last has been called to the attention of the British trade journals and is likely to have a good effect.

The American demand for manufactured Canadian lumber still continues and through the shipments were held up all winter for want of railway transportation. Shipments from the district of Quebec are now taking place with more satisfactory results. The shortage of cars for transportation from the Quebec mills and base of supply has been eased up during the month of April and, should these conditions continue favorable, Quebec shippers will be able to send into the United States the bulk of the lumber ordered and prepared for their American customers by the middle of this month. In the meantime, fresh orders are being booked from the central wood markets every day by the Quebec mill interests to prove that the American construction boom is still continuing, and judging from advertisements, is not likely to abate all through the coming summer. This demand is causing the Quebec firms at the time of writing some anxiety as to when the late spring will come to an end to allow the ice in the rivers to disappear and commence driving the logs cut in the woods.

The pulpwood situation is practically the same as it was last month with the exception that shipments are slow on account of the car shortage and the prices of the wood advancing, as forecast in your correspondent's last letter.

### Lumber Industry Staple at Normal Proportions

With shipments and production on a par with those of the preceding week and with a small decrease in reported orders, production and shipments are substantially in excess of the corresponding week last year, says the weekly report of the National Lumber Manufacturers Association. Revised and more complete reports for the week in view of the fact that thirty less mills are represented in the telegraphic reports from regional associations, than in the last week.

The excess of accumulated orders over shipments, so far this year is 171,000,000 feet, and over production 670,000,000 feet. For the last 52 weeks the reported accumulated orders exceed shipments by 826,618,000 feet; for the same period shipments were 100 and orders 107 per cent of actual production.

For the 379 reporting mills new business accepted was 94 and shipments 102 per cent of production. The southern pine mills percentages of production are 99 for orders and 110 for shipments; and for the Douglas fir mills they are 99 and 104, respectively. Of the reporting mills 347 report normal production, compared with which last week's production was 104, shipments 109 and orders 100 per cent.

### Market for Canadian Woods in Old Country

The outstanding feature of the spruce spot market during the past week or so has, of course, been the prevailing holiday spirit, but the quantities that have changed hands, while not large, have made considerable inroads into the comparatively small stock of useful sizes both in London and elsewhere in the country, says the "Timber Trades Journal," of London, England. The very natural result of this has been shown in the increase in prices, which has tended to curtail the sales of spruce somewhat.

With regard to the business in pine stocks of really first-class

wood are small, but seem to be sufficient for the comparatively small enquiries that are about. In the North the sales of third quality are satisfactory, but very few of the importers have any stocks, or at least very few representative stocks. With regard to fourth quality, which has always found a ready market in London, there has been quite an awakening recently, and we find that the stocks are hardly sufficient to carry us over until the fresh arrivals.

Birch is quiet, and it is evident that importers are making considerable use of our own native woods and the imported American article, at the expense of Canadian birch. It seems quite definite that the manufacturers in Canada have exaggerated ideas of the value of the fresh-cut birch for this market, and we doubt very much whether it will be possible to obtain even a small fraction of an advance on prices that are ruling at the moment.

With regard to the general situation in Ireland, it seems there is considerable scope for really big business here. Our Irish friends have always absorbed quite a considerable proportion of stocks from Canada, principally from the Lower Ports of the St. Lawrence, but up to a little while ago the importers were unwilling to face the prices that were required for fresh stocks; now, however, having realized that there is no likelihood of any reduction, they are endeavouring to fill their requirements. Pine has been selling comparatively freely in the Belfast district, but birch does not appear to be in very great favour.

### Northern Lumber Firm Will Have Busy Season

Austin & Nicholson, Limited, Chapleau, Ont., report that the demands for lumber is good at the present time and prices have considerably improved. The firm will be operating three mills, at Devon, Nicholson and Dalton. The former two are being operated directly by Austin & Nicholson, Limited, while the mill at Devon is run by the McNaught Lumber Co. which is a subsidiary concern. The company expect to turn out about 20,000,000 feet of lumber, 25,000,000 pieces of lath and about 750,000 railway ties.

George B. Nicholson, president and general-manager of the company, says that, in his opinion, labor conditions may be a little harder than last year and wages slightly higher. It is rather early yet to determine definitely how far they will go. Mr. Nicholson adds that they are not looking for anything in the nature of a boom and do not think that such a thing would be good for the lumber trade. Manufacturers, however, will have to secure prices considerably in advance of last year in order to meet operating costs. This increase can be obtained without a boom simply by what the trade term as a normal advance under normal and healthy conditions.

Since the death of Mr. Austin, president of the company, some months ago, the business has been operated under the name of Austin & Nicholson, Limited, with Mr. Nicholson as president and general-manager; Allen McN. Austin, first vice-president and James W. Austin, second vice-president. Reginald Thrush is the secy-treas. and A. L. Morse operating manager.

### Grey County Takes up Reforestation

It is likely that the Grey County Council will in the near future take up the matter of reforestation. G. A. Bothwell, deputy reeve of Sydenham Township is chairman of the Reforestation Committee of the Grey County Council and James E. Keenan is chairman of the Reforestation Committee of the Owen Sound Board of Trade. These two gentlemen held a conference recently with A. E. Richardson of the Department of Lands and Mines, Toronto, and T. S. Cooper, Agricultural Representative of Grey County.

Mr. Richardson explained the methods being taken by his department in the work. Individual farmers can obtain assistance from the department in the work if they so desire. The department will send out each year a sufficient quantity of trees to plant two acres free of cost. The seedlings are planted about six feet apart each way and about 1,210 to the acre.

### Merchants Do Not Like Flying Sawdust

At a recent meeting of the North Vancouver Council a communication was read from several storekeepers complaining about the quantity of flying sawdust from the various mills. It was pointed out that several of these mills are not properly equipped with burners as required by law. One merchant said he had to dust his goods six times a day.

In view of this and of the fact that the flying dust, particularly from the shingle mills, was responsible for considerable bronchial trouble and was enhancing the fire risk, the council decided that something should be promptly done and referred the matter to the proper committee.

H-480 Chains fuel Conveyors, with "RC" roller chain drives from motor countershafts

## Reliability in Chains

**A**LL chains *look* alike—but they don't all *act* alike.

There's a difference in chains—just as there's a difference in men.

It isn't luck that makes the chain equipment of a Saw Mill give reliable, "trouble-free" service—it's because the chain *actually is better*.

Reliability of performance is built into good chain—by *skilled* chain makers; and the correct raw materials, design, molding, annealing, heat-treating, inspection and tests must be conscientiously applied.

It is our pride—as well as our business—to make good chain. Fifty years' experience has taught us that *high standards of quality* result in *high standards of performance*.

You *expect* reliability of performance when you buy Conveyor and Power Transmission Chain—you are *assured* of it when you get *Link-Belt* Chain.

This trade >—< mark identifies our product—it appears on every link. It means that the chain has been honestly built for Reliable Service.

Specify *Link-Belt* Chain.

## EDGINGS

The sawmill of C. I. Zehr, New Hamburg, Ont., was completely destroyed by fire recently. The owner expects to rebuild.

W. Gerard Power, of the Power Lumber Company, Limited, St. Pacome, Que., spent a few days recently in New York on business.

Macaza Lumber Co. Limited, Montreal, is a new firm recently formed to manufacture and deal in all kinds of forest products. Capital \$49,000.

Among the recent visitors to Montreal were Messrs. David Champoux, of the Chaleurs Bay Mills, Restigouche, P. Q., and A. Champoux.

G. M. Strong, Limited, Montreal, was recently granted a provincial charter to manufacture and deal in lumber and pulpwood. Capital \$99,000.

D. H. McLennan, president of the Montreal Lumber Association, is one of the representatives of the Board of Trade on the Daylight Saving Association.

The sawmill of Albert Collier, Woodrout, Ont., was destroyed by fire. \$1,500 worth of machinery and lumber were consumed besides a loss to the building of \$2,500.

Matane and South Shore Co., Limited, St. Jerome de Matane, Que., is a new firm recently formed with a \$20,000 capital to manufacture and deal in all kinds of wood products.

The Eagle Lake Lumber Co. will not operate their mill at Eagle Lake, Ont., during the coming season, having sold their birch and hemlock logs to G. Holden of South River, Ont.

A. E. Maxwell, manager of the Gatineau Company, Limited, Ottawa, is a patient at the Montreal General Hospital, suffering from a stroke of paralysis. Mr. Maxwell was taken ill while on a visit to Montreal.

William Laking, president of the William Laking Lumber Co., Toronto, who has been spending the past winter in St. Petersburg, Florida, returned home recently after enjoying a pleasant winter in the Sunny South.

At a meeting of the Montreal Retail Lumbermen's Association on April 18th it was decided to hold an excursion of the members and their friends on June 29th. This will take the form of a boat trip down the St. Lawrence.

Hector MacLean, of Tory Hill, Haliburton district, Ont., spent a few days in Toronto recently calling upon the trade. He has been a lumber manufacturer for several years and reports that the outlook for the coming season is good.

The R. Imrie Lumber Co., has removed its office from No. 22 to No. 9 Canada Permanent Building, 18 Toronto St., Toronto. The company is taking out a federal charter and will soon be known as the R. Imrie Lumber Co., Limited.

Boring has been commenced at Windsor, N.S., on the property purchased some time ago by the Avon River Power Co. The company intend erecting a pulp mill on the site, and the new water supply will be used in that connection.

All the plants of the Spanish River Pulp & Paper Mills are busy at the present time and last winter the company took out 300,000 cords of pulpwood for use during the coming season. The company is now working at 100 per cent capacity.

J. A. MacLean, of Wingham, J. B. Mackenzie, of Georgetown, J. A. Laberge, of Sudbury and other well-known retail lumbermen, who also handle coal, were in Toronto recently attending the annual meeting of the Canadian Coal Dealers' Association.

W. H. Harris, of the Frank H. Harris Lumber Co., Toronto, who has been spending the past few weeks at their milling headquarters at Meridian, Miss., has returned home and reports business in the South as being exceptionally good with prices very firm.

The Green River Lumber Co., Limited, Green River, Madawaska, New Brunswick, is a new firm recently granted supplementary letters patent to take over the business of Oran B. Davis, and to manufacture lumber, pulpwood, and all kinds of wood products. Capital \$99,000.

Several freight cars loaded with pulpwood were recently derailed near Heaslip on the T. & N. O. Railway. The wood was scattered along the track for a considerable distance and traffic was blocked for some time. Two employees on the train were slightly injured.

James Umpherson, who operates a sawmill at Lavant Station, Lanark County, Ont., was in Toronto recently calling upon the trade.

Mr. Umpherson reports that he is taking out a fair cut this season and there is a very good demand for all lines of lumber in his section of the country.

At the recent convention of the National-American Wholesale Lumber Association, held in Pittsburg, two Canadians were elected on the Board of Directors,—Dan. McLachlin, of Arnprior, whose term of office will expire in 1925, and A. C. Manbert, of Toronto, who will serve until 1926.

Angus McLean, president of the Bathurst Co., Bathurst, N. B. and head of the Canadian Lumbermen's Association, has been appointed a member of the Advisory Committee of the Lumbermen's Underwriting Alliance, Kansas City, Mo. He is the first Canadian to be chosen as a member of the committee.

The newsprint, groundwood and sulphite mills of the Manitoba Pulp and Paper Company, Limited, Fort Alexander Indian Reserve, are being designed by Hardy Ferguson, of New York. It is understood that English capital is interested in the scheme. It is hoped to find a market for the production in the Prairie Provinces.

H. F. Bullard, who since 1912 has been with the Laurentide Company, Grand Mere, Que., has been appointed general-manager of the Dryden Paper Co., Limited, at Dryden, Ont. Mr. Bullard comes of an old paper-making family and has served in various capacities with the Laurentide Co., having been purchasing agent since 1917.

A resident from Cobalt said recently that the mines in that district were very busy and a large amount of timber was being used. He added that B. C. timber was coming into favor there and in some mines was being employed exclusively for all kinds of construction and mine work. Most of the material was sold at the mines in transit.

The Bell River Pulp Co., Limited, are contemplating the erection of a pulp mill at Sanneterre, Que., 56 miles east of Amos, where the transcontinental crosses the Nottaway River. The company has a capital of \$199,900 and have secured a 50 year lease. The water power is estimated at 2,000 h.p. capacity and will turn out 24 tons per day.

Representatives acting for a syndicate of New York and other eastern newspapers were in Victoria, B. C. recently negotiating with timber owners for the purchase of 7,000,000,000 feet of pulpwood on the Skeena and Kispiox rivers. It is planned to establish a pulp and paper mill for newsprint in Northern British Columbia at or near the city of Prince Rupert.

W. M. Tupling, of J. R. Eaton & Sons, Orillia, who is vice-president of the Ontario Retail Lumber Dealers' Association, spent a few days in Toronto lately on business. He states that the Orillia firm are very busy at the present time in all departments and are doing a record milling in transit business. This branch has grown to very large proportions.

D. McLachlin, of McLachlin Bros., Arnprior, Ont., spent a few days in Toronto recently. He says that both the mills of his firm will be operating to capacity during the coming season and the cut will be considerably increased. He anticipates that there will be an ample supply of labor and that manufacturing conditions will be on the whole, very satisfactory.

Stewart Rutherford, of the Redfern Lumber Company, and vice-president of the Montreal Retail Lumbermen's Association, has been appointed a member of the Quebec Streams Commission, in succession to I. W. Bishop, who resigned to supervise the operations of the Quebec Development Company at Lake St. John, P. Q. Mr. Rutherford is an engineer by profession.

A. G. Bowler, who for some time past has been chief hardwood inspector in Montreal and district for the National Hardwood Lumber Association, has resigned and gone to Boston. He has been succeeded by H. E. Hibbard who two or three years ago was in charge of the Toronto district. He resigned and since then has been living in Boston where he was selling lumber.

George B. Rizer, of Big River, Sask., intends embarking in the sawmill business. He has made for the past two years all the fish boxes he needs in his fish business, enough to take care of two million pounds of piscatorial products annually. Lately Mr. Rizer acquired three and a half million feet of spruce, and he believes that he can saw this to good advantage at the present time.

W. N. Belair, of Schuster Company, Belleville, Ont., and wife returned recently from a ten weeks' trip to Europe. The Schuster Company are large retail distributors of lumber and coal, and while away Mr. Belair took occasion to enquire into Welsh coal. He said it was to be had if the need arrived, but the trouble so far with Welsh product is that it has not been prepared in sizes for use in Canada, but now operators in Wales had found the need of selling in certain sizes and were preparing the coal accordingly. Mr. Belair went into the whole question of fuel, so far as Welsh anthracite is concerned, during his stay in England.

## Log with "Caterpillars"

In swamping out roads, toting supplies, skidding logs, or making up and hauling trains, the Northern "Caterpillar"\* Logger does all the things a machine must do to be a real success in logging work, winter or summer. Its flexible tracks enable it to climb over obstructions, cross ditches, and operate continuously both on and off the road. It is easy to control, turns in its own length and provides correct speeds for every operation. Where heavy snowfalls bury the roads and camps, the Northern "Caterpillar"\* Logger quickly plows through the drifts and gets traffic moving. The Abitibi Power & Paper Co. at Iroquois Falls, Ont., is logging the "Caterpillar"\* way. Let us give you the facts on their operations.

\*There is but one "Caterpillar"—Holt builds it

## Belting

MADE IN CANADA

Are you willing, is your Power Department willing to stop thinking of belting in terms of material, and consider it in the light of power delivered—strength tractive qualities—economy of upkeep—length of life—this is concentration—and, after these are considered, the cost of installation?

*Let us help you with your belting problems*

# THIS TRADE MARK IS YOUR BEST BELT GUARANTEE

**Q**UANTITY, not price, is the factor that determines a belt's value. Keep this in mind whenever you are tempted to accept an unknown belt offered at a few dollars "off". Remember that the difference in the service you **MAY** get from it, and the service you **WILL** get from a D. K. McLaren Gen-Oak Tanned Leather Belt will eat up those first few dollars many times over.

**T**HE D. K. McLaren Trade Mark is not used merely to distinguish the belt. It is put there for a definite purpose—to protect belting buyers against substitution and to guarantee them full value for their money.

If you like the safe and sane method of buying in preference to the haphazard, ask our nearest representative to give you his proposition. There is no obligation, of course.

PEMBROKE

ONTARIO

It's a Pink any-  
way you take  
it and it's the  
best Peavey  
made.

*Not altogether what we say,  
but what users say*

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,  
in calm weather, 30,000 in a head wind.

**West, Peachey & Sons** Simcoe, Ont.

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, doweling, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

**BAND RESAWS**

## SIMPLEST and BEST

**Wm. B. Mershon & Company**  
Saginaw, Michigan, U.S.A.

## CLARK HORIZONTAL RESAW

**A** Resaw will increase your cut 20% and adds only three or four men to your pay roll, less than 5%. Will often "pay out" in less than three months. A CLARK RESAW having the return within the machine and having a long table with the operator at the front and similar to an edger, not only avoids the initial expense of purchase and installation of return transfer, but also uses at least one less and usually two less men than other makes of resaws.

# ATKINS

## STERLING QUALITY SAWS

### A Reputation for Quality

The progressive up-to-the-minute mill man knows that

### Atkins STERLING STEEL Saws

Machine Knives and Tools have achieved their reputation because of their high quality and dependability.

If you have not read "The Story of Sterling Steel," and all that it implies in the manufacture of our Saws, clip this advertisement, ask for catalog, sign your name and address, and mail it to us at Hamilton.

If you want us to give you the names of some of the largest and most successful lumber producers who are using Atkins products, we will be glad to do so.

"A Perfect Saw For Every Purpose"

## E. C. ATKINS & CO.

Established 1857      The Sterling Quality Saw People

Canadian Factory, HAMILTON, Ontario

Branch carrying complete stock, VANCOUVER, B. C.

**MADE IN CANADA**

# *Here's A Money-Maker For You!*

Every experienced millman knows the value of a Horizontal Band Resaw. The "Long" Resaw has been conceded first place in this class of equipment. Its extraordinary efficiency is due to its scientifically correct design, and the quality of materials and workmanship put into it. Other features are its

ease of operation and its accessibility for cleaning, inspection, etc.

If you are interested, our engineering department is at your service, and will co-operate with you to the fullest extent.

# PORTABLE SAWMILLS

The Upper Fraser River Lumber Co. freighted a portable outfit, like the above, seventy miles over rough country to cut material for their big mill at Dome Creek, B.C.

They cut on an average of over 12,000 ft. per day, they turned out 200,000 ft. for their own use, sold several thousand dollars worth of lumber, produced over 2,000 ties and 100,000 ft. of lumber for stock. All this lumber came off their mill sight and was cut on the

## Waterous Portable Sawmill

*We back this mill for strength, efficiency and simplicity against any portable outfit being manufactured. Hundreds are in use in every part of Canada.*

# "HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

*Descriptive circular sent upon request.*

# "HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, and mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

### *Important Announcement*

A Shingle Nail is now being manufactured in Canada which should last the life of British Columbia Red Cedar Shingles.

This is a heavy gauge nail, has sharp point, wide head with thickened shank under, and is protected with a heavy coating of pure galvanized spelter applied by hot-dipped process.

Red Cedar Shingles applied with such nails assure a roof of lasting satisfaction.

Every lumberman could stock these nails to advantage. We will gladly send samples.

## The Long Lumber Company

TORONTO OFFICE: - - - HEAD OFFICE:  
25 Toronto Street - - - Hamilton, Ont.

# Long-Bell Hardwoods are identified

Logs from our own virgin forests. Each log selected and cut for the purpose for which it is best adapted.

Class of timber producing excellent widths and lengths.

Manufactured in our own Hardwood Mills, equipped with modern band machinery.

Manufacture supervised by experienced hardwood men.

Thoroughness given every detail of manufacture.

Particular care given to uniformity of thickness—carefully edged, equalized and trimmed.

End-buttet with mitre toothed saws.

Carefully sorted at chains.

Drying yard arranged to give thorough circulation to stocks in pile.

Every detail in sticking and drying carefully observed to insure best results.

Experienced inspectors grade lumber for shipment.

Double check inspection at cars in loading to insure uniform grades.

Same care exercised in loading in cars as in manufacture.

Long-Bell Hardwoods are easily identified by the Long-Bell trademark on the end of every piece.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

# Mr. McLean and The Bathurst Company—

## We Welcome You

In the Canadian lumber industry there are a few names that stand out with considerable prominence.

Among them is that of Angus McLean, head of The Bathurst Company, of Bathurst, N.B. Mr. McLean has for many years been identified with the industry in the Maritimes and has always been one of the leaders in every movement to elevate the standards and promote the interests of one of Canada's greatest industries.

This year he is rendering further service by having accepted the presidency of the Canadian Lumbermen's Association.

The Bathurst Company has in recent years sold the bulk of its product in either the British or the United States market, its Canadian business being a very small percentage of the total volume.

This important company commenced with the March 15 issue of "CANADA LUMBERMAN" a contract for the use of full page space, and, in sending this contract Mr. McLean gave two of his reasons for the decision to have The Bathurst

No doubt there are other lumber firms the heads of which feel the same as Mr. McLean.

We will gladly welcome such firms to the advertising pages of "CANADA LUMBERMAN". They will find us ready to give co-operation in full measure. It is on this basis that "CANADA LUMBERMAN" has won the respect of the biggest and best in the industry.

Company's advertising appear regularly in this paper.

He said:-

"We feel that your journal is worthy of the support of the lumbermen", and referring to some information we had given as to the steadily increasing circulation of Canada Lumberman in the U.S. and Great Britain, he added:-

"We are glad to get your letter advising that you are getting a better circulation for your magazine in the United States, and that you now reach a large number of buyers there. This is all very interesting information, and it certainly will be good for the Canadian lumbermen if their advertisements go prominently before the American buyers, as that is where most of the lumber, at least from the Maritime Provinces, has now to find a market."

# SIMONDS

## CROSS-CUT SAW FILES

When you use this special saw file you will find the satisfaction and economy for which you have sought. The Simonds Cross-Cut Saw File will give you 16 per cent more wear on cross-cut saw work than can be obtained by using regular tapered mill files.

It is also most efficient for sharpening Circular Saws.

You can get this file in 6, 7, 8 and 10 inch lengths.

Order from our nearest branch or secure them from your Hardware or Supply Dealer.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

### HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

EVERY strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This >—< mark identifies genuine Link-Belt Chain.

## Activity in Mining Industry Creates Increased Demand for Timber

By Cecil Cave, Cobalt, Ont.

The average person who thinks of mining does not associate it to any great extent with the lumber industry. Nevertheless expansion in this vital basic industry creates a demand for certain classes of lumber which will have a more or less important bearing on the market. This is particularly true of Ontario markets, in which province gold and silver mining development is proceeding at a rate which is expected by influential mining men to in time bring the province to the fore as the greatest gold producing area in the world.

As soon as shaft sinking commences, it becomes necessary to start timbering the workings which range from 7 x 11 feet to three times this size, with as many separate compartments. The material used in this work is generally 6" x 6" pine, spruce or hemlock, while the sheeting used consists of two to four inch lumber. Casings are made as the shaft is lowered. These are put together by the use of long rods at head and bottom as well as sides of the squares. In some cases these timbers are made as big as 12" x 12" on end and are from 6 to 8 feet long.

When lateral work is commenced in a mine a large station is cut at the point from which this work is to be done. The heavy rock and overburden is held in place by massive timbering, while as the work progresses tracks are laid on wooden sleepers along the drifts. Where the ore is found in large volume it becomes necessary to conduct stoping operations. This work results in the making of huge excavations and wherever there is any danger of rock caving in heavy timbering is resorted to. At the same time lagging, which consists of poles from 12 to 16 feet long with 6 to 8 inch ends are used for the construction of chutes and flooring down which the ore travels on its way to the openings along the drifts, where it enters the cars to be hoisted to the milling plants on surface. All kinds of material is used in this work, and most of it is used in the roughest state, even the bark being left on, as is also the case with props and stulls in underground work.

Often large crushing machines are installed underground and pumping apparatus required is generally erected on staging requiring the use of considerable heavy timber.

The surface equipment of a mining plant includes the heavy headframe, which must be of particularly solid construction, owing to the heavy strain of hoisting from underground. Tramways are then constructed from the headframe to the milling plant. In this work lumber in sizes from 4" x 4" up to 8" x 8" are used. The ore is then trammed to the mill which is generally a massive structure enclosing heavy bins, usually made of British Columbia fir and pine

and of very solid construction 8" x 8" and 12" x 12" studding and corner posts being used.

Owing to the excessively heavy machinery required for grinding ore, as well as the water and acids used, very heavy timbering is necessary in the construction of battery boxes for stamps, tanks for cyanide solutions and troughs for the conveyance of solutions and ore from one part of the mill to another. Dressed British Columbia pine is usually employed in the building of these tanks and solution boxes.

An idea of the large amount of timber and lumber used in mining is gained from a perusal of the annual report of the Hollinger Consolidated Gold Mines for the year 1922, wherein it is shown that timbering for shafts required \$22,308.21 worth of lumber; timbering of stopes and raises, \$123,231.02; retimbering, \$11,662.24. In addition to this there is the timber used for construction on surface equipment, which would probably bring the total to close to \$250,000.00 for the year. Enlargement of mining and milling operations this year will result in a considerable increase in the amount of material required.

A large amount of the lagging and rough lumber used by the mining companies of Northern Ontario, comes from the timber districts close at hand, including stulls, pit props and lagging, as well as a considerable amount of the sheeting for mill construction. For the finer uses in the plant, however, British Columbia fir has come into general favor, and at the present time is almost exclusively used in the making of tanks, bins, etc.

With large additions planned for the big producing mines and numerous other properties throughout the district, rapidly developing to the stage where milling facilities are required, an ever expanding market for lumber products of all kinds is to be found in the mining districts of Northern Ontario, where the available supply of home grown timber is to a large extent limited.

There is also a large amount of wire-wound cedar piping used for the conveyance of sands and solutions at and from the concentrating and cyaniding plants throughout the district, which is also a product of the Province of British Columbia, which has found general favor throughout the mining districts.

The main centres of distribution for the Northern Ontario gold and silver mining districts is found at Cobalt, Kirkland Lake, South Porcupine and Timmins, while other less prominent camps which are forging ahead as consumers of these products are Matachewan, Larder Lake, Gowganda and South Lorrain.

On the left is seen Cyanide Solution Tank of B.C. Fir and next is the head frame construction in a mining property at Porcupine, while on the right is shown a mass of timber props used in Northern Ontario mine.

# Discuss Trade Ethics and Cost Estimating

*Southwestern Ontario Retail Lumber Dealers Will Offer Prize for Best-Kept Yard and Factory.—Committee Appointed to Draw up Conditions Which Will Govern Contest—New Officers Elected for Coming Year—Necessity of Watching Overhead Expenditures More Thoroughly—How Retailers Differ in Their Estimates on Certain Standard Jobs in Woodworking Lines.*

George N. Kernohan, London,  
Newly Elected President

parent body of its kind in the province, and out of it grew the whole expending spirit of organization which resulted later in the formation of the O.R.L.D.A. and the various district bodies in different parts of Ontario. However, this is another story that has been presented in detail in the "Canada Lumberman" on previous occasions. Among the prime movers of those early days were Charles Hubbell, of Thamesville, B. F. Clarke and Allen McPherson, of Glencoe, and some of the Chatham yardmen. They started a movement in 1912 in the shape of a little local Association, the impetus and influence of which has widened and deepened until the status and the prestige of the retail lumber trade has been raised and strengthened throughout the whole province.

E. C. Russell, of Walkerville, presided at the gathering and the gathering and the first business was the election of officers. The new men who will direct the energies and destinies of the Association during 1923 are,—

President, George N. Kernohan, London.

Vice-president, J. L. Naylor, Essex.

Secretary-treasurer, B. F. Clarke, Glencoe, (re-elected).

Directors,—L. H. Martyn, London; W. J. Taylor, Ridgetown; P. G. Piggott, Chatham; Chas. Hubbell, Thamesville; S. H. Herath, Ojibway; H. S. Ludlam, Leamington; John McGibbon, Sarnia; E. K. Kalbfleisch, Stratford.

The Nominating Committee was composed of E. C. Russell, A. R. Sanders and J. C. Scofield, and their report was unanimously adopted. Several new members were introduced and given the hand of fellowship. These included Ezra Fahner, Port Stanley; T. A. Clatworthy, London; L. H. Martyn, London; R. H. Smith, London, and B. C. Turville, St. Thomas. It was reported that the association was growing steadily and the outlook for the coming season was very bright.

## Insurance Risks and Safety Work

During the morning proceedings, E. C. Russell retired from the position of chairman and thanked the members for the warm support accorded him during his term of office. He introduced his successor, Mr. Kernohan, who was received with a hearty applause. The new presiding officer said that the organization had accomplished a great deal in the past, and he believed that greater things could be carried out in the future. He would do his utmost to advance the interests of the association and he hoped that he would have the co-operation of all those present.

The matter of fire protection in planing mills and retail yards, a reduction of the number of accidents in mills and the advisability of keeping neat, attractive premises was discussed at considerable length. A committee was appointed under the direction of J. C.

Scofield, to draw up conditions which will govern a contest for which an appropriate award will be offered. It was felt that a healthy rivalry among the members in the lines indicated, would prove of benefit to the industry in general and cause the retail lumbermen to take a greater pride in their plants and yards. The discussion was taken part in by J. C. Scofield, W. T. Piggott, B. F. Clarke, George H. Belton, Charles Hubbell and others, all of whom endorsed the idea.

One member stated that the fire inspectors came round quite frequently to his plant and if boards were piled too near the steam pipes or the water barrels were not full and other precautions taken, attention was called to the matter. The inspector kept him and his establishment "jacked up," and it was a good thing. Another member stated that he thought some of the doctors who attended to small injuries to workmen, such as a cut finger, etc., sometimes took advantage of the Workmen's Compensation Board and charged altogether too much for medical attention. He was advised to report such a physician to the Board and an investigation would, no doubt result. The discussion became general on safety, insurance safeguards, clean yards and well-kept premises.

The matter of insuring trucks against public liability and claims for damages in case of accidents was brought up by Walter T. Piggott who referred to the attitude of some "go-betweens" who sought, on behalf of those who might be injured, to settle with some lumber companies and then "divvy up" the amount with their client. He declared that such an attempt had been made to extort enormous damage from him, and he had fought the case to a finish. His truck had been driven by a man who had injured three people and settlement was effected by the courts at much less than the "adjuster" had held out for. Mr. Piggott pointed out that, for a few dollars extra, lumber dealers owning trucks could secure double liability which, he believed, was a wise move. He asserted that if any man, in the employ of a retail lumber merchant, driving a truck or a team ran into and injured or killed anybody, the man himself was not held responsible for damages but liability fell upon the owner of the truck. In spite of all that could be done there would always be careless employees and he thought, in view of the frequency of accidents, that double liability was a measure of protection well worth considering.

## Lively Discussion on Trade Ethics

Adjournment was then made for lunch which was served at Wong's and the repast was thoroughly enjoyed, the London dealers acting as hosts.

In the afternoon the discussion was general regarding trade customs, and it was pointed out that a new business had been opened in Windsor in which several manufacturing firms are reported to be interested. The new concern is called the National Door & Hardwood Flooring Co., and its place of business is on McDougall Ave., in the premises formerly occupied by the Essex Provision Co. Edward Allen is the manager of the organization. It was asserted that this firm was selling to contractors and others in carloads as well as less than carload lots. The general trend of the debate was that the Association was opposed to any wholesale or manufacturing firm selling to contractors or others who are not legitimate dealers as set forth last January in the pronouncement adopted at the Ontario Retail Lumber Dealers' Convention in Windsor.

At that time it was decided that the following constitute a legitimate retail lumber dealer:—"Any person, firm or corporation carrying an assorted stock of lumber, lath, shingles and interior trim reasonably commensurate with the needs of the community in which they do business. The Association puts itself on record as considering the following legitimate customers for retail lumber dealers only,—contractors, consumers and manufacturers using one or two carloads per year."

It was agreed that the secretary be instructed to send a copy of this resolution to all wholesalers and manufacturers. It was decided that this definition covered the ground adequately, and whole-

H. S. Ludlam, Leamington,  
Director

John McGibbon, Sarnia  
Director

sale firms which are selling to contractors or farmers, will be notified that they are engaging in an unfair practice and not living up to the tenets of legitimate trade.

### Selling to Consumers in Other Towns

Another question, which arose was whether it was justifiable or good ethics for a retail lumber dealer in one town to sell a customer of a retailer in another town or village. It was pointed out that there might be exceptional cases where a resident was a friend or patron of a certain dealer, would be carrying on building operations in a community some miles away, and naturally would prefer to get his stock from the dealer that he knew and have it delivered at the place where the contract is being carried on, rather than buy from a local dealer. Other exceptions might also arise whereby a customer had an alleged grievance or prejudice against the local man and take an Irishman's delight in being "agin him" and so went out of town to secure his material.

Some outside concerns who do a wholesale and retail lumber business, have in the past been selling customers of local dealers in their own town and this has caused some feeling in a few instances. It has been charged that the retail branch of the wholesale firm will nominally conduct such a transaction and give the customer the benefit of the wholesale price; otherwise it was contended the business could not be obtained from a consumer (with the freight added) against a local dealer's quotations. This matter was thrashed out for some time and it was felt that it was perfectly legitimate for a firm conducting a wholesale and retail business to sell a customer of a lumberman in another town, providing the firm making the sale showed by its invoice or order book that the prices quoted were retail and not wholesale. Everyone present agreed that this was a fair basis of outside negotiations and there the matter rests at the present time.

An invitation was received from the Seaman, Kent Company, manufacturers of hardwood flooring, Toronto, for the Association to hold its next meeting at West Lorne, Ont., and visit the plant of the company at that point. The matter was referred to the Executive and the invitation of Mr. Kent will likely be accepted at an early date.

### Some Wide Differences on Estimates

Planing mill operations and estimating came up for consideration. The secretary, B. F. Clarke, reported that he had asked for estimates from five firms located in different towns in South-Western Ontario, on certain doors, window frames, door frames, trim, etc., and there was quite a difference in quotations. The figures, which Mr. Clark obtained on an ordinary, stock door of white pine, 1 3/4 inches thick, and the prices for the frame or trim, which could be of white pine, Georgia pine or B. C. fir, are appended, Mr. Clarke explained that these quotations were secured from different sections of the district and were given for comparative purposes only.

### Should Watch Costs Carefully

George N. Kernohan pointed out the necessity of more careful watching of costs. Expenses of handling lumber were going up all the time and many firms did not make an accurate or generous enough allowance for their overhead. One thing was certain,—they all knew that lumber was costing them enough but were they getting a high enough price to cover all the expenses of unloading, piling, carrying and delivering, and at the same time making a fair profit and interest on their investment?

W. T. Piggott said that leaks should be zealously guarded. Overhead was climbing all the time and a planing mill represented a large investment. Several firms thought they could establish a mill and cut the prices and the speaker referred to one, which had started in with this idea in view and in five years had lost \$45,000.

L. H. Martyn, London  
Newly Elected Director

It was necessary to scrutinize every detail and know what each operation cost and how much was the overhead, the time taken, the value of the stock, the expense of operation and production, etc. If all these were not carefully estimated, a planing mill would, certainly, eat up all the profits that were made in the lumber selling end.

M. R. Bogart, B. F. Clarke, J. C. Scofield and others also spoke along similar lines, stating that for some time they had been in favor of forming an estimating class among the dealers in the South Western district. Several members had taken the course of the Millwork Cost Bureau of Chicago, with good results. The whole question of "costs" was a vital one in the success of any business, and all guesswork and cut-throats should be eliminated.

It was decided that, at future meetings, more attention would be paid to the subject of costs, and several members will be asked to give concrete instances and relate their experiences along this line.

### Annual Outing to Thousand Islands

H. Boulton, secretary of the Ontario Retail Lumber Dealers' Association, Toronto, spoke of the annual outing which will be held down the St. Lawrence and through the Thousand Islands, the Bay of Quinte district and Lake Ontario, from July 5th to 9th, on the steamer "Cape Trinity," which will carry 226 passengers. It is expected that this excursion will be largely patronized. The cost per member will be \$40, which will cover everything. Many points of interest will be visited and it is expected that calls will be made at Brockville, Kingston, Belleville, Picton, Rochester, Niagara and other points. The full details are now being arranged and will be announced in the near future.

Short addresses on various topics were given by L. H. Richards of Sarnia; J. C. Scofield, of Windsor; A. McPherson, of Glencoe; E. C. Russell, of Walkerville; G. B. Van Blaricom, Editor "Canada Lumberman," Toronto, and several newly elected members of the Association.

A hearty vote of thanks was moved to the London trade by P. G. Piggott, of Chatham, and E. O. Penwarden, of St. Thomas, for

(Continued on page 43)

# Several Changes Made In Mechanics' Lien Act

*New Measure Will Come into Force in September Next—Important Revisions Which Make Operation of Act More Effective—Judges Will Have Enlarged Powers*

There was passed by the Ontario Government during its recent session a new Mechanics' Lien Act which was introduced by the Attorney-General for Ontario, Hon. W. E. Raney. On September 1st next the new measure will become operative. It contains a number of important revisions and amendments which will be gratifying to the retail lumber dealers of Ontario, who have long contended that the old Act was an anachronism,—not to say a standing joke. It offered little or no protection to designing contractors, and many retail lumber dealers can tell of how heavy losses have been sustained under its operation or, rather, lack of operation.

Persistency in any good cause generally wins, and it is pleasing to note that success has crowned the efforts of the Ontario Retail Lumber Dealers' Association who, although buffeted at various times and sidetracked on other occasions, never lost faith in the efficacy or justness of their cause and believed that agitation would result in achieving the end in view. Under the new measure fraudulent practices are much more difficult to carry out and the powers of a judge are extended.

There is no need of recalling the hopes and fears that have characterized the work of the O.R.L.D.A. in the past three or four years. The principal point raised by the lumbermen was that the owner of a building under erection should be responsible for 100 per cent of the contract price in the matter of satisfying liens. The 100 per cent principle on the part of the owner was not accepted by the special committee of the Legislature of last year.

It is seldom that any individual or institution gets all that it goes after, and in this instance a larger measure of success was met with than usual, for the Act has been thoroughly revised and its leading features will only be summarized.

Under the new legislation wide power to use his discretion in seeing that all parties get just treatment is accorded the judge or officer trying the action; this notwithstanding the way in which the contracts may have been worded and the previously accepted principles of the Act.

A great deal is heard about precedent in these days but under the new law, it will not count for so much in the actions that may be tried in future. The judge will be able to exercise a bigger measure of common sense and not be so bound down by hard and fast limitations. Thus he will be able to render decision much more upon the real merits of the claims than could formerly be done.

It is pointed out that this is an important matter from two points of view, first in overcoming obstacles experienced under the old Act in cases where a ridiculously low contract price was agreed upon between the owner and the contractor, thus under the hold-back, reducing the liability of the owner; and second in overcoming difficulties in connection with an unreasonably high price mentioned in an agreement of sale under which the purchaser is to erect buildings upon the land sold. If the latter went back on his agreement, liens were filed and the lien claimants discovered, under the old Act, that the seller had a prior claim for the unpaid portion of the purchase price. As this figure was absurdly high, all the available money was eaten up and the claimants under liens got little or nothing.

## Responsibility of the Owner

Two sections of the new Act deal especially with the owners responsibility. Section 10 says,—“Save, as here and otherwise provided, the lien shall not attach so as to make the owner liable for a greater sum than the sum payable by the owner to the contractor.” This section was also in the old Act. Section 6, however, has considerable bearing upon Section 10 and it contains important additions and amendments. This section gives the wage earner or material man the right to a lien, and the new portion of this section states that this lien shall be “limited to the sum justly due to the person entitled to the lien and the sum justly owing by the owner.” This portion, with the word “justly” in two different places, is new and the manner in which this word “justly” is expected to be interpreted by the court is clearly indicated by changes which have been made also in Section 36, Sub-section 3.

This section instructs the judge or officer trying the case as to his duties. It is in much the same language as the corresponding

section of the former Act but it contains a new clause (a) as follows: “The form of the judgment may be varied by the judge or officer in order to meet the circumstances of the case, so as to afford to any party to the proceedings any right or remedy in the judgment to which he may be entitled.”

## Fraudulent Agreements Checked

Legal advice has been obtained as to the interpretation of these clauses that may be expected after the new Act comes into force. We are told that “Because of the joint operation of Section 33, Sub-section 1, and Section 36, Sub-section 3, the officer trying the case has jurisdiction to deal with a fraudulent agreement and, if it does not express the true consideration, Sub-section 3 of Section 36, allows him to give the necessary relief to a lien holder and declare that the agreement for purchase shall have priority only to the extent of the actual amount justly owing by the owner to the contractor.” Further, our legal advice contains the following: “If, in fact, there was a fictitious contract price mentioned in the contract (too low for completing the work) and a lien holder establishes this fact at the trial, the judge or officer can give him a lien upon the full amount justly owing, notwithstanding the wording of the contract.” It will be seen, therefore, that, of our advice is accurate, a fictitiously low contract price will not in future relieve the owner of any liability short of the actual amount justly owing for work done and materials supplied.

With these two new principles incorporated into it, the new Act will be a great improvement upon the old one, unless loopholes, that cannot be foreseen, develop as a result of judicial interpretations. Apparently the special committee of the Legislature have given careful consideration to our representations on these two points, relating to a fictitiously low contract price and a fictitiously high price in an agreement of sale. They have undoubtedly endeavored to make the new Act clear on these points and to eliminate much of the fraudulent practice carried on formerly between owners and contractors who were not honest. Not only will this greatly reduce the possibility of dishonest collusion between an owner and a contractor, but it will result in decided benefit to the honest owner and the honest contractor, whose reputations have formerly suffered from the misdeeds of dishonest ones.

## Delivery on Adjacent Lot

In connection with the delivery of material to a job, a change has been made in the wording of the new Act. An amendment that we advocated in 1918, and which was carried, provided that delivery upon a lot adjacent to the job should be a good delivery for the purpose of establishing a lien. The new Act, while continuing this principle, seeks to regulate it to some extent. The words used in the new Act are as follows: “The placing or furnishing of such materials to be used upon the said lands, or such other place in the immediate vicinity of the said land designated by the owner or his agent, shall be good and sufficient delivery for the purpose of this Act.” It will be noted that, in the case of delivery upon land “in the vicinity,” the new Act requires it to be “designated by the owner or his agent.” It will, therefore, be necessary for the material man to have the owner or his agent designate the place of delivery if it is not upon the actual lot on which the building is being erected. In this connection, however, it is important to bear in mind that under Clause 36, referred to above, the judge has much greater jurisdiction than formerly and is given power to “afford to any party to the proceedings any right or remedy in the judgment to which he may be entitled.” The legal advice we have obtained says that “notwithstanding any defect in delivery, where the provisions may not have been strictly complied with, a lien will attach for all materials incorporated into the building.”

## Husband Acts as Wife's Agent

The new Act provides in Section 7 that, in the case of a contract given by a husband for or on behalf of a married woman, he shall be conclusively presumed to be acting as her agent as well as for himself, unless before the materials are supplied notice shall have been furnished to the material man to the contrary. This clause is amended as compared with the old Act and makes a contract given

by a husband on behalf of a married woman somewhat more binding upon the wife's interest than formerly.

In the matter of leasehold property, an amendment is made to Section 8. Under the old Act, the owner's consent had to be secured in writing, verified by affidavit, at the time of registering a lien, or otherwise the lien would not attach to the fee simple. Under the new Act, the lien will attach automatically to the fee simple of a leasehold property, provided the lien claimant gives notice in writing, by registered letter or personal service, to the owner or his agent of the work done or material furnished; unless the owner or his agent within ten days thereafter gives notice that he will not be responsible therefor. Furthermore, the new Act provides that in the case of a leasehold property no forfeiture or attempted forfeiture of the lease shall deprive the lien holder of his right to lien, except for the non-payment of rent, and in such case the lien holder may take over this responsibility and carry the lease on in order to protect his lien.

#### Sub-contractor's Lien Protected

Section 13, Sub-section 2, of the new Act provides that a sub-contractor shall be entitled to enforce his lien notwithstanding the non-completion or abandonment of the contract by his contractor or sub-contractor. This preserves the right of the supply man to a lien notwithstanding difficulties that may arise by reason of the contractor to whom he supplied goods making default in connection with his job. Insofar as the percentage is concerned, this section puts the position of the man supplying goods to a sub-contractor beyond question.

An amendment has been made to Section 22, Sub-section 5. Under this, if the architect in charge of a job refuses to give a final certificate for three days after application has been made for such a certificate, the contractor may then, within another seven days,

register his claim for a lien. This limit of three days upon the architect curtails the limit of time within which the architect may refuse to give his certificate or for which the contractor has to wait in order to establish his lien on the final certificate.

An important change has also been made in connection with notice of trial given to defendants in a lien action. In the first place, the notice has to be given, under the new Act, at least ten clear days before the day appointed for trial. Under the old Act, eight days was the period. A clause has been added as follows: "Where any person interested in the land has been served with statement of claim and makes default in delivering statement of defence, he shall nevertheless be served with notice of trial and shall be entitled to defend on such terms as to costs and otherwise as the judge or officer trying the action may deem just."

This provision, which is new, is very wide and, taken in conjunction with Sections 6 and 10, gives the court practically complete power to grant such relief as may be necessary, to adjudicate on all the facts in connection with the contractor, supply man or mortgagee, and definitely to fix a true amount of the lien in relation to all the parties."

Under Section 37, Sub-section 3, of the new Act it is provided that "where a claimant fails to establish a valid lien he may, nevertheless, recover a personal judgment against any party to the action for such sum as may appear to be due to him and which he might recover in an action against such party."

The legal advice secured regarding this change in the Act states that it "may limit somewhat the advisability of bringing action under the new Lien Act. Under the old Act, judgment would be given for a personal amount in any event, even if the lien itself failed. Under the amended Act, the indication is that the court would have discretion to refuse a personal judgment if they were not satisfied that proceedings should have been commenced under the statute."

## Quebec Forms Provincial Retail Association

The Province of Quebec Retail Lumber Dealers' Association was formed at a meeting held in Montreal on May 8. This association is the outcome of the formation of the Montreal Retail Lumbermen's Association and includes sash and door manufacturers as well as retailers. The Montreal Association is now merged in the Provincial body, forming one of several centres created in different parts of the Province, with the headquarters in Montreal. The meeting was well attended by representative dealers, from various parts of the province and was presided over by Mr. J. P. Dupuis.

At a meeting held on April 15th a committee was appointed to draft by-laws and regulations and to prepare reports dealing with the proposal to form a Provincial-wide organization. This committee submitted their report, and it was unanimously agreed to proceed with the formation of the Province of Quebec Retail Lumber Dealers' Association.

The following provisional board of officers and directors was appointed: President, G. Lebel, Montreal; vice-president, J. O. Chalifour, Quebec City; with the following directors for the districts named:

Farnham—Messrs. B. R. Stevens, (Bedford) and J. B. Comeau, (Farnham).

Quebec—Messrs. J. M. Dessureault, and L. C. Marquis, (Quebec).

Victoriaville—Messrs. J. E. Giroux, (Victoriaville), and L. Caron, (Nicolet).

Hyacinthe—Messrs. H. H. Sheppard, (Sorel), and C. A. Morin, (St. Hyacinthe).

St. Jerome—Messrs. L. E. Parent, (St. Agathe), and A. Limoges, (Terrebonne).

Montreal—Messrs. J. P. Dupuis, and S. F. Rutherford, (Montreal).

Valleyfield—Messrs. A. Cossette, and J. O. Clermont, (Valleyfield).

After the election of the officers and directors the chair was taken by Mr. Lebel and the by-laws and constitution as prepared by the committee was adopted.

Mr. Horace Boulton, of Toronto, secretary of the Ontario Retail Lumber Dealers' Association, was present, and gave details of the working of that Association. On the motion of Mr. Dupuis, Mr. Boulton was thanked for his information.

A vote of sympathy was also passed to Mr. B. R. Stevens in the death of his sister. Mr. G. A. Thompson, the secretary of the Montreal branch, is also secretary of the Provincial Association.

## Dealers in Ancient Capital Re-Elect Officers

The Quebec City Retail Lumber Dealers' Association is flourishing and gaining steadily in membership and influence. It is some years now since this organization came into being but it has served a splendid purpose and to-day is more active and aggressive than ever. At the last meeting officers were elected for the coming year as follows:—

President: L. C. Marquis, (re-elected).

Vice-president: Louis Hamel, of E. T. Nesbitt Reg., (re-elected).

Directors: Jos. Lefrancois, of La Cie Jos. Lefrancois, (re-elected); J. Gibson, of J. & H. Gibson; Jos. Morneau.

Treasurer: David Bilodeau, of Bilodeau & Dore Enrg.

Secretary: J. O. Chalifour, (re-elected).

Three new members were also received,—J. & H. Gibson, Bilodeau & Dore, Enrg. and Joseph Morneau.

It will be remembered that a long time ago a definite schedule of charges for delivery of material was agreed upon and this rate has been adhered to by all the members. Even dealers who do not belong to the Association, now charge for deliveries. Recently one of the older members said he felt it incumbent on him to say that this improved condition in delivery represented in his case an annual income of, at least, \$3,000 that he did not previously receive.

He added "Now when you consider that this improvement was carried out six years ago, our firm has realized from that source the handsome sum of \$18,000.

"I should say that this represents about the average amount earned by our members from making a delivery charge. The plan has worked out to the satisfaction of all and is fair and equitable," declared another member.

Speaking to the "Canada Lumberman" one of the officers said,— "We have had an increase of about 30 per cent in the amount of our sales and are very busy at the present time. We are confident that the summer will witness very gratifying returns. Stocks are rather low and it would seem that August will be arrived before any appreciable increase in supplies will reach us. Until then it is going to be more difficult to buy than it is to sell.

"The trouble that we have just now is the credit question. We believe that the retail lumber dealers are granting too much credit to contractors and altogether selling on too long terms. I believe that things could be improved considerably if all dealers decided to be more prudent in granting credit. We believe that an organization along the building and loan line would greatly help out in this matter."

# How Safety Reduces Rate on Compensation

Safety pays in every way, not only in the preservation of life and limb but in duty done and the satisfaction that comes from doing the right thing and engaging in a good cause. The various Safety Associations have accomplished much, and any measures that are taken for the protection of workmen, will in time bear good fruit providing there is a sympathetic attitude on the part of the foreman, superintendent and owners of the plant.

In past years there have been altogether too many accidents, both of a fatal and non-fatal character in the woodworking, planing mill and lumber industries. It is gratifying to learn that a decided improvement has set in and the rates for 1922 in wood working plants have been reduced from a provisional assessment of \$2.00 to an actual assessment of \$1.50. The provisional rate for the present year has been fixed at \$1.80, but it is believed that by the end of 1923 a reduction will be shown. Accident prevention efforts have brought about this decided increase in levy and it is to be hoped that the splendid campaign in the interests of Safety will continue.

At the recent annual meeting of the South-Western Ontario Retail Lumber Dealers' Association the subject of Safety was discussed, and it is likely that a prize will be awarded to the mill having the best record during the present year. The Ontario Pulp & Paper Makers' Safety Association has aroused considerable awakening among the forty pulp and paper mills of the province in presenting a silk flag annually to the plants having the fewest number of accidents and the least lost time. The mills are divided into two classes, large and small, and a competition or friendly rivalry has brought about a decided betterment in management and methods in the various plants so that the toll of human lives and personal injuries has been considerably reduced.

It is stated that wood working plants in Ontario now have the lowest compensation rate of any province or state where Workmen's Compensation Acts are in operation. The rate in Michigan is \$2.65; New York \$4.24; Ohio \$1.95 and Ontario \$1.50. The good work inaugurated should be kept up by the planing and woodworking mills of Ontario. A decrease of 25 per cent for 1922 in the levy for compensation is gratifying and encouraging and, no doubt, during the present year, a better showing will be made.

Recently a memorandum was issued by the Workmen's Compensation Board to employers, in which a number of important points were set forth. One, under the caption of "Attention to Accidents," is as follows:—

"It is earnestly urged upon the management of every firm that the most careful and prompt attention be given to taking care of and reporting any accidents that may happen to their workmen. Do not leave this to some irresponsible person. Where there is default, it is almost invariably because someone with whom the manager of the business has not kept in touch has failed in his duty. Default often costs money and always causes trouble and dissatisfaction. First aid, and ambulance or conveyance to doctor, home or hospital where necessary, are required to be furnished by the employer, and the employer should see that a competent and reliable doctor is chosen wherever a doctor is necessary. The workman and the employer should agree upon the choice of a doctor. Accidents should be reported without delay to The Workmen's Compensation Board. Every large employer should keep on hand a supply of employer's forms, which can be obtained from the Board, but if not on hand the first notice should be sent by letter. Be sure to give all the information asked as to the workman's earnings. Call the Board's attention at once to anything you fear may be wrong in any case.

"Remember the law requires every employer to keep posters (Form 82) concerning the act posted up where workmen can see them. If you are without them write the Board for a supply, saying how many you need. Little Booklets explaining the provisions and operation of the Act can also be had.

... "Notice of Award. Notice of every award, whether compensation or medical aid, is always sent by the Board to the employer. Too often no attention is paid to these. Frequently employers do not even know that they are coming to their office, and inquiries are later made to which these notices would have supplied the answer. The amount or detail work which the Board has to handle is immense and employers are begged not unnecessarily to ask a second time for information already given.

"Preserve Wage Records. Pay rolls, wage accounts and time sheets should be carefully preserved until the Board's Auditor has audited them in usual course. It is not possible, without undue expense, to have an auditor visit the employer every year.

"Names and earnings of any members of the employer's family employed and eligible for compensation should be carefully entered on the time sheets and wage records and on the pay roll statement furnished the Board. This will save trouble and inconvenience in case of accident."

## Border Cities Lumber Dealers Get Together

The lumber retailers of the Border Cities in Ontario have been meeting twice monthly in order to become better acquainted. The gatherings which have been held in the Prince Edward Hotel, Windsor, have been very well attended, J. C. Scofield, of the Windsor Lumber Co., acting as chairman, and E. W. Pulling, of the McLean Lumber Co., Windsor, as secretary. Dealers have been present from Walkerville, Sandwich, Ford, Essex, Ojibway, Tecumseh, and other border points.

One of the principal matters which has been occupying their attention is the adoption of a code of trade ethics, which embraces the following:

To encourage the use of lumber as a building material, by educational propaganda and by collecting and distributing information concerning the proper uses of wood. It shall be our aim to prevent, so far as possible, the sale of lumber of inferior grade, kind or manufacture, to compile data as to stocks of lumber on hand and, if practicable, to avoid carrying excessive quantities of odd sizes and grades of lumber, thereby reducing the expense of operation.

Our Association shall contemplate the furtherance of co-operation which in a legal manner shall act in stabilizing prices in such a manner as to insure a fair margin of profit, by compiling and disseminating information regarding the cost of doing business and the education of dealers in the prevention of waste and unnecessary expense, to avoid, unfair and discriminative trade methods and to prevent, so far as possible, imposition on the public through misrepresentations or any dishonest practices.

In becoming members of this Association, we subscribe ourselves to the specific proposition that it is unethical—

- 1st. To circulate information detrimental to competitors.
- 2nd. To attempt to injure a competitor's credit.

their hospitality. This was carried amid hearty applause, and the London members replied, stating that it was a pleasure to have the

3rd. To give false information with intent to deceive a member.

4th. To divulge information given in confidence to a member.

5th. To create dissatisfaction among competitors' customers or to employ agents or solicitors to do so.

6th. To submit lower bids after a bill or order has been awarded to a competitor.

7th. To misrepresent quality of stock, give short measure or substitute grades.

8th. To do any business act which does not conform with the established rules of good sportmanship.

### Discuss Trade Ethics and Cost Estimating

being associated with the business for many years

## Historic Lumber Firm is Still Going Strong

*D. Aitchison Co., Limited, Founded Nearly Sixty Years Ago Becomes  
Incorporated—Veteran Heads of Concern Retire, Allowing  
Honored Employees to Take Hold of Business*

The D. Aitchison Lumber Co., Limited, of Hamilton, is one of the oldest organizations in Canada, being originally founded by two brothers William and David Aitchison who came out to this country from Annon, Dumfriesshire, Scotland, in 1858. They had learned the trade of cabinet making in the old land and soon found employment in the various branches of the lumber business and in 1866 began the manufacture of boxes in a small way in part of the building known as the Cooper carriage factory situated in the block bounded by King, Park, Main and Bay Streets which site in the Ambitious City is still occupied by the present firm.

For some years business was confined to the manufacture of packing cases and general planing mill work. As the business extended and the need of new premises was felt they bought from the Cooper company the main building with considerable land adjoining which was used for a lumber yard, and machinery was installed for the manufacture of sash, doors and interior finish.

In 1894 the partnership known as Aitchison & Company was dissolved by the death of the elder brother, William. The business was taken over and carried on by David Aitchison as D. Aitchison & Company. Business conditions generally had much improved and from that time on the firm made rapid progress and the volume of trade greatly increased.

In 1898 David Aitchison passed away and was succeeded by his son W. J. Aitchison who carried on a year or two alone when he took into the partnership Fred Taylor who had been a successful contractor in Hamilton for many years.

On Christmas night during the winter of 1902-3 the firm suffered a set back when the main building of the mill was destroyed by fire. It was a decidedly severe winter and they had a busy time clearing away the wreck and rebuilding to be ready for the business of the coming season. A new structure and more modern machinery soon enabled the firm to make up for the loss caused by the fire.

In 1906 so that they might secure lumber at first cost the firm bought a saw-mill on the Magnetawan river together with the right to cut timber on a 44 mile berth in the adjoining township. The business was carried on very successfully for about 15 years and their yard was kept supplied with most of the hemlock, spruce and birch which was required.

The steady progress made by the Aitchison organization and the enviable position it holds as one of the oldest and most successful of its kind in Ontario has not been due to any brilliant strokes of

trade but by a steady adherence to the old time qualities of strict attention to business, honest dealing and service.

After being in partnership for about 25 years Mr. Aitchison and Mr. Taylor felt that the time had come to have the employees as far

Frederick Taylor, Hamilton. Partner for twenty-five years with W. J. Aitchison, in the lumber business

as possible take hold of the business, some of them having been in the service from 20 to 30 years. At the beginning of this year a company composed largely of the employees was granted a charter to operate the concern and with practically no change of personnel other than the dropping out of Messrs Aitchison and Taylor.

The business is being carried on along the same lines and policies as previously and sales have been extremely good considering the backward spring. The members of the new company are as follows.—President, M. E. Peterson; vice-president, D. Cole; Treasurer, C. Peterson; Manager, S. S. Leggatt.

All these men with the exception of M. E. Peterson had been connected with the business more or less for a long period and of course, are thoroughly acquainted with requirements of the trade. The prospects in Hamilton for the summer are promising.

### When an Order is Not an Order

Many a concern has been wrecked in its career through an excess of business and too apparent prosperity. This statement, at first, may seem peculiar, even paradoxical. What is the reason of the downfall of many new and old firms? The lack of system, dearth of service, inferior quality of goods, want of working capital, loose business methods, unwise credits and lax collections. There are not a few men who ostensibly think that the one requisite about "big business" is to secure orders, roll up accounts and pay no arbitrary attention to credits. "You will get your pay some time and volume is what counts," they say. "Others are selling that fellow and taking a chance, why not us?"

All this sounds plausible and pleasant but, in times of expansion or business depression, it is well to watch the financial status of clients. Orders that are landed too freely will bear close scrutiny and the man, who falls readily for a generous consignment without some consideration, is likely to be the first to cancel or the last to pay. There are orders and orders.

A solid, substantial business is worth more than one which is loosely run and is full of care and anxiety. Many a small concern, which is well governed and soundly administered, earns a deal more in proportion to investment and effort put into it than some colossal organization which has many ramifications and does not pay too close attention to individual accounts or has a top heavy overhead. Volume is the one thing that sounds big, and to have one speak glibly of millions of dollars of capital, turnover and sales is impressive and luminous, to the small fellow who comes in and can count his annual trade in the small figures.

Only the other day, it came to light that one concern doing less than half a million dollars a year, made practically as much net profit as another in the same line which did five or six times that amount. The latter looked like a mountainous structure groaning and bringing forth a mouse.

And all this leads up naturally to orders for forest products. In the last issue of the "Canada Lumberman" there appeared some points to be observed when ordering lumber. Twenty-three definite clauses were set forth which it would be well for those who make out or give orders, to follow. There was printed in the same issue some timely references, made by Mr. A. C. Manbert, at the Wholesale Lumber Dealers' Association, Toronto, when he called attention to the fact that orders in these days should be carefully scrutinized. It was pointed out that many orders were not orders at all in the best and most acceptable idea. Some orders were an embarrassment; others were a grievance; some a clog on the wheels of progress and

others a possible source of bitterness, while a few were an aggravation. The whole thing was admirably summed up in the quotation "that an order which does not show every special condition entered into between the salesman and the customer, is not an order but a breeder of misunderstanding and dissension."

Thus, in all orders, it is well to consider many things;—the credit of a customer, his standing and past or present relations with the firm, and then to set forth explicitly the terms, the time of shipment, the character of the stock, grade, routing, discount, delivery, etc. It should be remembered that many an order is invaluable to a firm until the goods are delivered and collection made. When settlement is effected in full then a definite transaction has been concluded and something tangible established in building up and financing a business.

### The Spirit of Unity and Tolerance

It is pleasing to note that a spirit of friendship and co-operation is prevailing in all ranks of the lumber trade. Everything points to higher ideals and loftier levels. In the old days there was treachery and suspicion and it was regarded as a clever denouement to put something over the other fellow or to beat him out by fair means or foul. Business ethics today are of a higher order. The man, who does not play the game and play it squarely and openly, is not likely to travel far on the road to permanency.

Associations of various trades have done and are doing much to bring men together, to soften their acerbities, dethrone suspicion, engender thrust and stimulate respect. In the lumber trade as well as in allied lines all men have practically the same problems to face. The fellow across the street or down in the next block is not such an unattractive inhuman specimen of humanity after all if you only get to know him. This, however, requires more than a telephone talk or a bowing acquaintance. It means that you will take the trouble to pay him friendly calls every once in a while and discuss mutual problems with him and he will do the same with you.

In the past dealers have been for years in the same line of business and even in small towns have not recognized one another. Now through the intervention of local, district and provincial Associations, the lumberman knows not only those engaged in the same line in his own town but also for many miles around. He feels that he has a friendly personal interest in them as they have in him. He becomes bigger and broader than his business and takes a larger outlook of his calling and a wider survey of service.

The Rotarian spirit is animating trade associations more and more and arousing kinder thoughts in those who are endeavoring to build up an honest living. The spirit of "live and let live" is abroad.

Not very long since at one of the retail lumber dealers' district gatherings it was pleasing, indeed, to see six of the leading forest products merchants of one city present and three from a smaller sister community. These constituted practically all the members of the trade in each place. They laughed and joked with one another, told stories and had a regular old boys' reunion. A few years ago no one could have got them to mention the names of their opponents, without a slur or imprecation, and yet today each man is only too pleased to associate with his fellows, to serve on committees, take joint action on trade ethics and generally seek to usher in that higher and better state of affairs which is slowly but surely impregnating the whole mercantile and manufacturing systems of the present era.

### Consumption of Wood Ever Increases

Canada is not alone becoming interested in the salvage of her forest resources. The European countries with extensive woodlands are also studying the situation and advocating economical policies of conservation and reforestation. In England the scientists having continually in mind the national resources of that country, are sounding the clarion call to protect the forests of Great Britain before it is too late. In the Mother Country it is recognized that, for each 100 tons of coal mined, at least, one ton of timber is required.

Writers on the subject of forest conservation advocate that the watchword should be conservation of supplies, not merely the conservation of England's supplies, but the world's, as the nations are interdependent. The writers then proceed to enumerate the multitude of things for which wood is used these days apart from construction, and add that it is no wonder there is a depletion of the world's forests, to say nothing of the enormously increased cost of living to the public. The question is asked if ingenuity cannot provide collapsible packing cases, and possibly the most serious position is that, in spite of iron and steel having so heavily supplanted timber in construction work, the consumption of wood is increasing at an alarming rate.

It is pointed out that from thirty to forty years ago Great Britain's imports of wood were £15,000,000 in value, while they re-

cently topped £100,000,000, and this refers to England's newspaper supply dependent upon the forests. While one ton of waste paper would make 15 cwt. of newspaper, there seemed to be no means of collecting this waste for re-manufacture—a failure in economics and a waste of nature's resources. They complain that the evening newspaper is a questionable necessity and a perpetual drag upon the timber supplies.

It is contended that the world generally has got away from the simplicity of living and is too lazy to study economics, and that there can be no doubt but that, with proper cultivation "grasses" would supply the need of men for paper.

### Does it Pay to Produce Spruce Lath?

Are many lumber mills making the best possible use of their spruce slabs and edgings? It is more profitable to convert the slabs into lath than to dispose of them for fuel? There have been many discussions as to the utilization of waste forest products, sawdust for example, but comparatively little attention has been paid to the economical use of slabs and edgings. These have been gradually regarded as coming within the refuse class with their main and best use as lath lumber.

The purpose of this article is to give figures submitted to the "Canada Lumberman" which require consideration in view of the difference in profit to the mill when this waste lumber is converted on the one hand into lath and on the other into fuel. The balance is distinctly favorable to the latter.

It is not claimed that this holds good in the case of every mill, only those who are in a position to supply fuelwood to large towns and cities within a certain radius. Beyond that the freight rate operates against fuelwood, increasing the price to the consumer so as to make it practically impossible to ship. As a matter of fact, this trade is based on lower freight rates—high rates would kill it.

As a basis of calculation, spruce slabs may be quoted at \$4.00 per cord and edgings at \$3.00 per cord. A thousand feet of spruce logs will produce about three-quarters of a cord of slabs and edgings, and if properly turned so as to produce slabs, instead of sawing logs, live and producing edgings will run about half a cord slabs and a quarter cord edgings per 1,000 feet. The value at the mill of the half cord of slabs is \$2.00, and of the quarter cord of edgings 75 cents, a total of \$3.66 per cord of slabs and edgings. A million feet of logs will produce 750 cords worth \$3,745 on board cars.

Now let us take the lath. About two-thirds of the 750 cords will, it is fair to assume, be large enough to make lath, and give about 700 pieces of lath per cord of all grades and lengths. Taking this basis, the average price will be about \$5.25 per thousand, from which must be deducted cost of manufacture, tying cord, etc., which conservatively may be estimated at \$1.75 per thousand, leaving a net return of \$3.50 per thousand. It must be remembered that the refuse from lath is of no value and must go either to the burner or refuse heap, whereas in the case of fuel the waste is nominal.

The position may thus be summarized:—

750 cords of slabs and edgings for fuel at \$3.66	\$3,745
350,000 pieces of lath at \$3.50	\$1,225
250 cords of slabs and edgings unsuitable for lath at 9.15	\$2,140
which gives a balance in favor of fuel of	\$1,605

It might be objected that no consideration has been given to the difference in the cost of piling and loading, but the difference is so trifling as to be scarcely worth mentioning.

The foregoing figures may not meet the approval of everyone, but they open up an avenue which is worth exploring, especially in view of the importance of not overlooking every source of additional revenue, and of utilizing, to the utmost extent, every by-product of the lumber industry.

### Confidence in Your Competitor—What?

Co-operation is the watchword of the day in many industries, and in the building up of business, quality and service are the elements that count the most.

In connection with a business organization or an Association that wins acquisitions to its ranks, there must be mutual confidence and trust. Many federations or corporate bodies in the trade line make a mistake by seeking to accomplish too much during the first year or two. The result is that all energy peters out, and what looked like a promising and permanent institution, falls by the wayside. The attendance becomes irregular, the fervor of the members expires and the don't-care spirit seems to prevade the whole guild. This is because strength has been shattered and there has been lacking concentration and co-operation.

In forming an Association, too much should not be attempted at first, yet how often is the mistake made of seeking to carry out

rapidly too comprehensive a programme. Efforts should centre upon one or two practical subjects and progress be made on these so that a definite record of achievement may be shown. If any body attempts to deal with too many matters at the outset, they scatter their efforts over too wide a field and do not develop as effectively as if they contented themselves with concentrating attention upon one or two objects or aims and then adding gradually to the number.

These observations are made in view of the fact that some new organizations in the lumber line are coming into existence, and it is well at the outset that the members should not be carried away by any fallacies or misconceptions. It is necessary that all those, who are chartered members of an Association, or enter at its inception should have confidence in one another. This is the basic element upon which great structures are reared and the standards of service, conduct and management elevated and buttressed. With confidence and a definite goal in view, matters are likely to proceed smoothly along the road of expansion and prestige.

When one uses the term "confidence," this does not mean a half-hearted belief in the other fellow or a mere toleration of him. As the president of one organization pointed out in a recent inaugural address, the members must not feel that they were entering into a federation so as to learn some of the intimate inner workings of the other fellow's affairs, as this was not the object in view. They must feel that everyone who came in, wanted to help all the others as much as he could, knowing in return that he would receive a greater measure of benefit for himself. If they did not hope for this greater benefit, they should not join. There was no use in deluding themselves with ideas about joining an Association as a duty and getting nothing in return. The Association idea in itself was selfish, but anyone who joined in the proper spirit and with the right end in view, could get more out of it than he put into it. No man however, could reap any good from an Association unless he had complete confidence in the other fellow and threw overboard any idea he had entertained in the past about certain chaps not intending to play the game fairly and squarely. As the work of the Association developed there would arise many things in which it would be necessary to display this feeling of confidence and mutual trust. While giving out certain facts, might sometimes go against the grain, yet all should realize that they had to co-operate fully and freely.

Concluding, the speaker said,—“We may feel that it is an unnecessary burden that we should be required to dig up essential facts and data in connection with our business and put them in tabular form for the benefit of the whole trade. We may occasionally feel that this particular information required is not of any value. We may have any one of several objections to co-operating unreservedly at different times, but I want to impress upon you all, at the outset, that the idea of confidence in one another, confidence in our officials and confidence in our Association as a whole, should be animating factors. This is the spirit, with which we should all be imbued and if we practice it, we can count upon good, practical results and the advancement of our work, usefulness and service.”

### Woodman Spare That Tree

Woodman, spare that tree!  
Touch not a single bough!  
In youth it sheltered me,  
And I'll protect it now.  
'Twas my forefather's hand  
That placed it near his cot;  
There, woodman, let it stand,  
Thy axe shall harm it not.

That old familiar tree,  
Whose glory and renown  
Are spread o'er land and sea—  
And wouldst thou hew it down?  
Woodman, forbear thy stroke!  
Cut not its earth-bound ties;  
Oh, spare that aged oak  
Now towering to the skies!

When but an idle boy,  
I sought its grateful shade;  
In all their gushing joy  
Here, too, my sisters played.  
My mother kissed me here;  
My father pressed my Hand—  
Forgive this foolish tear,  
But let that old oak stand.

# *Lumbermen Hear Able Talk on Insurance*

## *—How Companies are Operated—*

At the last annual meeting of the Canadian Lumbermen's Association, held in Montreal, an interesting and impressive talk on insurance was given by G. D. Finlayson, of Ottawa, Superintendent of Insurance. He touched upon the management, operation, losses, premiums, etc., of the different companies operating in the Dominion, and in the course of his timely address said:—I do not know that I can say anything to you that you do not know already, perhaps, better than I do because you are concerned with insurance in a practical way while my interest is, necessarily, somewhat that of an observer. Canada, in 1921 paid as a tax in the form of fire insurance premiums about \$50,000,000. For the fiscal year 1920-21, the total revenue of the Dominion government from income tax and business profits tax was about \$40,000,000. The total revenue from all excise duties was about \$47,000,000. The total revenue from the Post Office department was about \$26,000,000. The estimated revenue from all customs duties for the present fiscal year 1922-23 is about \$100,000,000. These figures enable us to form some idea of the growth and importance of the insurance tax; and the remarkable thing is that while the Canadian public is very much agitated over these other forms of taxation—while we read of the public being driven to desperation, and even in some cases to suicide from the imposition of the income tax—we are inclined to feel that the attitude of the public toward the insurance tax, is one of easy-going nonchalance and indifference.

The business of fire insurance in Canada is very largely conducted by British and foreign companies. The Canadian companies transact only about fifteen per cent of the total. British companies carry about fifty per cent. Foreign companies, mainly the United States, carry about thirty-five per cent. Life insurance is almost exactly the reverse. Canadian companies carry about sixty-five per cent of the entire life insurance in Canada. Why is this? To get the explanation we have to go back to 1877. In that year the Dominion Government enacted legislation which set out that every British and Foreign company transacting insurance business in Canada should maintain in Canada deposits sufficient to protect all Canadian policy holders. At that time a great many British and Foreign mutual life insurance companies opposed the necessity of making these large deposits and acting on the out-worn theory that mutual companies could not segregate their assets, decided to withdraw from the Canadian field, and the majority of the companies then transacting business in Canada decided to suspend operations. For the next ten or fifteen years, while life insurance companies were wholly inactive, Canadian life insurance companies got a foothold which they have never since lost.

### **The First Big Fire Felt**

For fire insurance companies the year 1877 was also a bad year because in that year occurred the great St. John conflagration. Prior to that year Canadian fire insurance companies were also beginning to feel their strength. Along came the conflagration with its loss of thirteen million dollars and its insurance loss of six million dollars. Three or four Canadian companies were ruined. During the next five years two or three more gave up the race; and Canadian fire insurance received a set back from which it has never yet been wholly able to recover. It was twenty-eight years after 1877, in 1905, before the number of Canadian companies in the field attained the number doing business in 1877. During that twenty-eight years, twenty-five Canadian companies passed out. The underwriting loss of the twenty-five companies amounted to something like ten million dollars. The experience of Canadian companies during the forty years over which our records extend was an underwriting loss of something like one per cent of the premium. Canadian capital is afraid of the fire insurance business, and the proportion of Canadian business represented in the total business is, therefore, small; and, what is of more importance, it is decreasing.

Now, what is the situation in insurance to-day. During the last forty or fifty years insurance has yielded a profit to the insurers of just under five per cent of the premiums. I do not think that anyone will say considering the risk that fire insurance business is under, a margin of five per cent on the premiums is an inordinate profit.

There is criticism about the elements entering into the profits; that the acquisition extent entering into all computation of profit

is too large. I am inclined to agree. The acquisition extent of fire insurance companies to-day is about forty per cent of the premiums. Sixty-five per cent is taken up with losses; the balance is profit. Of that forty per cent, twenty per cent is approximately the agents commission, three, four or five per cent is taxation; and the balance is overhead, office and general expenses.

Another item entering into the computation of the profits is the reserve. We very often hear that the reserve of fire insurance companies is too high. With that I am inclined not to agree. I think the main thing in fire insurance is to have stability and solvency, and so long as fire insurance companies in the event of liquidation are required to return to their policy holders the full honor and portion of the premium and so long as on the cancellation of their policies they must return to the policy holders the full honor and portion of the premium, they must have a large reserve.

### **Reserves are not too High**

It is quite true that the companies may reinsure; but so long as these contingencies are there they must maintain that reserve. As a rule the reserve is not found to be too high. The companies want to give their policy holders policies which are of unquestionable security; and I think, notwithstanding the times of the present, every one of you, who has a policy in companies licensed in Canada may very well sleep soundly at nights.

The question of expense is, I think, directly related to the number of companies. We sometimes hear that there is insufficient competition in Canada. I am inclined to think that that is true; but that does not arise from the number of companies transacting business. In fact, I am inclined to think we are suffering from over competition rather than under competition so far as the number of companies are concerned. Twenty years ago there were thirty-eight companies transacting fire insurance business in Canada. To-day there are one hundred and sixty five or seventy companies. The average amount of premium income to-day per company is about the same as it was twenty years ago.

Overhead plays the same part to-day as it did twenty years ago when the volume of business was about one-fifth what it is to-day. Not only that, but the large number of companies has produced a scramble for business and a scramble more important still for agents. The number of agents has inordinately increased until we have to-day twenty thousand fire insurance agents. The average premium income per agent to-day is less than it was twenty years ago.

The result of the large number of companies coming into Canada and the scramble for agencies and agents has caused an increase in commissions because if the demand for agents is greater than the supply, you can easily see that the commissions have to be increased in order that the old companies will not lose their agents when the newcomers make a better offer. I am convinced that the acquisition cost in fire insurance companies to-day would be less if we had the number of companies reduced by one half.

### **More Competition in Premium Rates**

Now, is there a lack of competition due to the association of companies in underwriters associations for the purpose of fixing rates? I am inclined to think that is so. I think we haven't enough competition in premium rates. Our financial records make no distinction between what are called Board and Non-Board companies, but the proportion is usually taken as five to one. In the lumbering industry I understand the proportion of Non-Board insurance is larger and is increasing.

As you are all probably aware, during the last few years there have been admitted to Canada as licensed companies of insurers a number of reciprocal concerns specializing in insurance business. These concerns have entered Canada on the same basis, competing under the same conditions as other companies—stock and others. They are writing an increasingly large portion of the lumber business in this country. The volume of business transacted by these companies I think runs in the neighborhood of thirty millions, the total premium income being about six hundred thousand dollars.

Now, to get an idea as to the place that business occupies, I may say that the total amount of unlicensed insurance business reported to the department amounts to about twenty-two million

dollars. So that, the business transacted by those specializing in insurance in Canada as licensed concerns is some what greater than the total amount of business placed beside the unlicensed concerns in the lumber industry.

I want to say right here on this question of competition that nothing will please the department more than to see independent competition in insurance in the lumber industry and in all other lines of industry increase. The larger you can make that competitive line of business the better. What we do feel like insisting upon is this; that companies transacting and carrying Canadian insurance should domicile in this country and protect their Canadian policy holders. We are more and more inclined to stress this point by reason of the fact that we are faced continually with the problems of Canadian policy holders with companies that are not licensed in Canada, who have failed to collect because of the unwillingness of the companies to pay either because they are in liquidation or otherwise.

#### Broker had to Make Good

Now, this problem is bound to become of some importance. It is accentuated by the decision of the Ontario courts a few weeks ago whereby a broker who had placed business with unlicensed companies was held liable for a claim which occurred for five thousand dollars when the company with which he had placed the business failed to pay. The result of that situation is this: that brokers placing this business are more and more inclined to put upon the insured himself the responsibility of saying whether or not the company with which he is placing the business is sound or not. Now, that is a responsibility which the ordinary insured does not care to assume. Re that decision we have received a great many applications from policy holders asking to be advised as to the stability of the companies. I am not going to say that all unlicensed companies are not sound. That would be extremely foolish, because many of them are sound. But, when the question is put to us in that way, all we have to say is that the insured must take his own risk because we have no means of saying whether the company which is now sound will continue to be sound, and in a year if it has proved to be unsound we have nothing on hand that we can attach to secure the policy holders. I would like to see all these unlicensed insurance companies obtain licenses in Canada and deposit securities in Canada. That can be obtained. There is no logical obstacle to its being done. As I said, years ago there was a feeling that mutual companies could not segregate their assets. That is no longer in force. Some of the mutual companies are doing that now. The effect of the licensing of these companies in Canada would be the most helpful movement that we can possibly have in fire insurance to-day.

#### No Elimination of Competition

A number of you are concerned probably about the tax that has been imposed on these unlicensed insurance people. The impression was unfortunately given that this movement was founded on the ground of restricting, if not, indeed, eliminating competition. Nothing could be further from the fact. We desire to equalize the burden of taxation upon all classes. I hope the time will never come when it can be said that the Dominion government places a burden on capital which comes into this country and makes its home here while other business doing business from abroad goes scot free. Having equalized these conditions the greater competition we have among these companies—the greater competition we have among companies not belonging to underwriters—the better it will be. There will be a lowering of insurance costs, and the creation of certain abuses which are bound to creep in when competition is not available in sufficient volume.

I do not want to continue this talk indefinitely. I think our purpose would be very much served by a discussion on these problems. If there are any questions arising out of this insurance matter in which I could assist in any way, I will be very glad to assist; but you may have problems of which I know nothing. If I cannot answer your question I will be very frank and say so.

#### What Leading Lumberman Says

Mr. W. E. Bigwood, of Toronto said: During the last few years I do not suppose we lumbermen have been more interested in anything than in the question of insurance. No matter whether you have a small mill or a large mill, a small yard or a large yard, during the ordinary course of business our members are obliged to seek information regarding the insurance problem. It is only natural to seek that information especially if the idea is prevalent that the rates are too high. That is probably why the average policy holders are carrying insurance in different fields, whether mutual, reciprocal or other insurance. I was hoping Mr. Finlayson would go on and explain the difference in the kinds of insurance, but he is free to answer questions along this line. The point that impressed me most was the system of inspection. As far as mutuals and reciprocals are

concerned, they have their regular inspections, and as a rule there is someone around our branch every few weeks. The result has been that we have been able to secure a good portion of our insurance from the so-called outside companies. As far as results which have been obtained in any fire we have had, we have had very prompt settlement from all. The methods are a little different; but it does seem to me that the whole question is the question of inspection, and I was hoping that Mr. Finlayson would have touched on that subject.

#### Examining Risks Very Closely

That is another thing that I think the reciprocals and mutuals have to hold in this country, because I believe the inspection they give is very important. They will not take every risk until they have examined the risk very closely. If they find that certain things should be done by the policy holder and the policy seeker consents that is alright, but if not, they ignore the risk. That may be one reason why the tariff companies are obliged to charge a higher rate than others. The reciprocals and the mutuals have the advantage in the return of the profits; the tariff companies are stock companies and the money they make goes to the stockholders. The mutuals and reciprocals are making a certain allowance for necessary reserves.

I think Mr. Finlayson will agree with me that that makes a very attractive form of policy for the average layman. I heartily agree with him that protection is necessary; that the government should have a certain control over them because the average man has not time to study fully the intrication of the insurance business. Therefore, in the department of Insurance it is essential that we have all the information obtainable about the different companies and have the public protected no matter whether you carry large or small lines. I would like to ask Mr. Finlayson his idea of close inspection and the difference in rates between the tariff and the mutuals and the reciprocals.

#### The System of Inspection is Good

Mr. Finlayson continuing said. On the question of inspection I think there can be no difference of opinion. I am filled with admiration for the system of inspection inaugurated thirty or forty years ago by the mutual companies and continued ever since. I think it has been of the greatest importance to industry both in Canada and the United States. To my mind it is the very strongest combination that can be given. I believe Mr. Bigwood is right that not sufficient importance has been given to inspection of properties by the stock insurance companies. I think the mutual companies have shown them the way. The inspection which they are now giving, and which I think is increasing year by year, is very probably due to the competition from the mutual companies. That is one of the things I had in mind when I spoke of the correction of certain defects. There is no doubt that there is a great deal in what Mr. Bigwood says that the stock company, by reason of the fact that it writes all business, must have a larger margin of profit than the company which limits its business to practically fire-proof risks.

I was very much surprised with an argument advanced by a wholesale dealer in Winnipeg a few years ago. This man had a very highly protected plant and his insurance was placed in licensed stock companies. I expressed my surprise that his risk was not carried by the mutual companies. His argument was something along this line. He said: "I have a plant which is eligible for the mutual companies, but I know that I can obtain a very much reduced rate, but my plant is of value to me in so far as I can sell my goods to retailers all through this country. The places of business of these retailers are not eligible for mutual companies. They are not eligible for unlicensed insurance of any kind. They can be insured only in the stock companies. Now, it is well worth my while to see that stock company insurance is possible in order that my business may prosper. Therefore, while I am, myself, eligible for the mutual companies, it is good business for me to patronize the companies which will insure my customers and make it possible for me to carry on business and make a profit."

There is no doubt there is something there. That is the attitude of a considerable number of men who have plants which are eligible for the lower rates. They realize that the stock companies are carrying a line of business which cannot be secured elsewhere. Now, from the fire prevention standpoint—and you must be concerned with fire prevention as well as fire insurance—I would say that every one of these small places should either go out of business or be put in such a condition that they are eligible for the mutual companies; but that is impracticable.

#### Making Property Fire Proof

There is no question at all in my mind that the stiff inspection instituted by these big concerns has been of greatest importance and benefit in showing property owners how their property can be made absolutely fire-proof. The rate is, no doubt, considerably less.

Of course, remember this: the insured at the outset pays five or ten dollars more than he pays the stock company by way of a deposit premium. For instance, he pays fifteen or twenty cents on a sprinkler building. The insured going to the mutual will pay seventy or eighty or ninety cents or possibly one dollar for it. At the end the unabsorbed premium is taken and returned—that ninety cents—to the insured. Take a case where a stock rate is twenty cents. The insured will probably deposit with the mutual company at the outset one dollar. At the end of the year he will probably get back ninety cents. You are getting the use, in the meantime, of his dollar for a year on which is earned six per cent. He has, therefore, received sixteen cents really, ten cents unabsorbed premium and six cents interest. I think there is no doubt that the insured having made that deposit and the business having been cancelled, or, if we can conceive it, the company going into liquidation, the policy holder can claim a claim in liquidation for the unearned portion of that premium. It is a liability that must be covered by the deposit. The man having made a deposit with the mutual company, the company must incur a liability of fifty cents. The mutual company says: we are asked to make a deposit of five times the stock companies. The answer to that is this: you have received five times as much money as the stock company. If you wish to be released the remedy lies in your reducing the deposit premium. For thirty or forty years the return has been eighty or ninety per cent of the average premium. If instead of a dollar they took thirty, forty or fifty cents, then their deposit would be reduced to the same as the stock company.

So far as the reciprocals are concerned the method of operation is different. The reciprocal charges as a rule return to the insured the same twenty or twenty-five per cent. There is, of course, the contingent liability. The member of the concern is, as a rule, liable to the amount of the premium paid. If he has paid one hundred dollars premium and the losses are excessive he may be called upon to pay the loss. There is a comeback in certain contingencies to the insured in the stock company insurance. In the case of these larger companies the contingency is something that you need not worry much about. The experience of twenty or thirty years has been in every respect satisfactory.

### The Bulwark of Modern Civilization

The home-owning spirit is what should be encouraged in every community. Wherever there is a large building campaign, new streets and districts spring up. There you will find a go-ahead town along with peace and contentment. In any centre where the majority of the residents are home-owners, there is seen a solidity and permanence which is not witnessed in municipalities where the growth is of a mushroom nature or where industrial enterprises are such that workers are busy one season and slack the next. They live only in rented dwellings and are prepared to leave the burg as quickly as they entered it.

There is too little publicity given to the fact that, by systematic effort, men can save money regularly so that they can build their homes without and greater labor or sacrifice than by paying rent. Most every bread winner admits that he can pay rent, especially if the rent is not more than 25 per cent of his weekly wage or salary, but when it comes to buying a home, he stands back aghast and wonders how on earth he could surmount the apparently staggering figure that he sees before him. All he needs is confidence and courage. These can be brought about through co-operation and the stimulation of loan and savings societies, own-your-home expositions, educative literature by the retail lumbermen, motion pictures and other agencies.

The most widely known song in the world to-day is "Home Sweet Home." It is just one hundred years ago that John Howard Payne wrote the memorable words. The song was first sung in public at Covent Garden Theatre in London, England, on May 8th, 1823, being included in the second act of an opera called "Clari" or the "Maid of Milan." Howard was an American actor and his sweet, heart-compelling production will never die. He has put into poetry sentiments and thoughts that will live as long as domestic bliss itself.

The great danger of Canadian institutions to-day is that they tend to shatter rather than build up the home, its influence and wholesome surroundings.

Much might be said about the home being the bulwark of the nation, the foundation of its citizenship, the strength of its manhood and womanhood, and the backbone of its duration and integrity. Early home associations are the strongest and most binding, and the teachings instilled in youth are not soon or easily forgotten. On the plastic mind of the child if right principles are inculcated and high ideals presented, the remembrance of these will be strong and act as a sheet anchor in periods of stress and strain.

In this world we all like to be well thought of and well spoken

of. As the family is the great institution that clusters around the home, so in the upbringing of children, the parents of to-day should seek to foster that spirit which makes for strength of character, nobility of purpose and steadfastness of will. When a family shifts from one place to another, having no fixed abode and no opportunity to cultivate ideals or visions, no time to give attention to the beautiful, the attractive or the aesthetic, an inferior quality of citizenship is engendered, along with disregard for the higher standards of living and honor. There exists the susceptibility to give way to temptation and low ideals.

Much more might be said upon the home and what it stands for, what can be put into it and what can be taken out of it. The following lines by J. O. Mackie, which recently appeared in the "American Lumberman," set forth the domestic delights of a real home, a real family and a real life:—

I will build me a home in a quiet place,  
Away from the noise and the crowd,  
Where shade trees meet across the street,  
And children are allowed.

No lifeless iron or raw red brick,  
Or sullen walls of stone,  
Nor fence of steel make neighbors feel  
That I want to be alone.

I will build it strong with the sturdy fir,  
And the fragrant cedar and pine;  
With a garden so that flowers may grow  
Around this home of mine.

And there each night on my front porch,  
When the sun goes down in the west,  
My wife will be there in her rocking chair,  
And I'll be there in my vest.

And my boy will be there with his eyes on his dad  
Who will sit with his feet on the rail,  
And tell him about some wonderful trout  
That would soon have turned into a whale.

And I'll think of the time when we lived in a flat,  
And squandered our money for style,  
And I'll think of the guys who never get wise,  
And I'll smile and smile and smile.

## New Sales Tax on Lumber

Under the Fielding budget a change has been made in the sales tax on lumber, which will now pay the same tax as will prevail on other products, namely, six per cent.

The new tax will become effective August 1st and will be collected at the source of production, that is, on the sale by the manufacturer to his customer.

The present sales tax on lumber is three per cent, which is payable upon the price at which the manufacturer sells to his customer. No tax has been collected from the retailer unless he bought direct from the manufacturer or purchased a further manufactured product in lumber such as sash, doors, etc.

The new sales tax on lumber imported into Canada will be six per cent. upon the duty paid value. The present tax is four and one-half per cent. The duty paid value is understood to mean the invoice price plus the duty.

No intimation has yet been received from Ottawa as to whether the manufacturer can absorb the same and show only one item on his invoice, or whether the sales tax must be shown as an added item in addition to the price at which the lumber is sold.

# Character and Quality of Western Hemlock— Growing Demand in Eastern Market

By Kenneth M. Brown, Toronto

The high character and quality of B. C. hemlock, particularly in grades designed for interior use, are bringing merited recognition in the major markets of the East. The products of this splendid, vigorous Western tree, although superior to that of the Eastern species, have suffered because of the prejudice existant against the name hemlock; caused by the objectionable qualities of the Eastern variety. Had it been more fortunately named, B. C. hemlock would have been coming into the eastern market in great volume in a comparatively short space of time. The necessity for educational work would have been eliminated.

Strictly by its merit, B. C. hemlock has rapidly become assured of a permanent and growing demand in all the major markets of this continent. Such assurance is particularly welcome, not only to those manufacturers now producing hemlock, but to the industry as a whole. Enlarged markets for this excellent wood were not only desirable, but absolutely essential to economic welfare.

Ranging southward from Alaska and as far east as Idaho, hemlock is found along the entire coast, and also in the interior of British Columbia. It thrives best on deep, porous soil where lots of moisture is available. It predominates in certain coastal districts of British Columbia and it is in this province that it reaches its greatest development in size and quality. Here it reaches from 125 to 175 feet in height and ranges from two to five feet in diameter. It seldom occurs in pure stands, usually being mixed with Douglas fir, Sitka spruce and red cedar in the lower elevations and various firs in higher altitudes.

## The Tree Multiplies Rapidly

A prolific seeder, it multiplies rapidly and its acreage is increasing in proportion to the natural growth of other coast woods. Its ability to withstand shade enables it to flourish where other species would not live and frequently results in the establishment of hemlock reproduction to the almost complete exclusion of other woods.

It is estimated that there is, in British Columbia, about 52 billion feet of standing hemlock timber or approximately 25% of the entire merchantable stand. As this percentage will increase yearly for reasons already assigned, this wood is one of the most important in British Columbia in available supply. The estimated cut in 1916 was 101,315,000 ft. b.m., and has undoubtedly been considerably increased since. As hemlock is present in large quantity, the logging of this tree in conjunction with fir, cedar and spruce is an economic necessity and closer utilization of its products will eventually benefit all branches of the industry.

B. C. hemlock is not a general utility wood in the sense that we speak of Douglas fir, but for the purpose to which it is adapted, no superior is found among competitive woods.

Of lower strength value and durability than Douglas fir, B. C. hemlock should not be used as heavy timbers nor exposed to weather conditions unless painted. There is this exception—hemlock timbers can be used with the utmost satisfaction for sub-flooring in dock construction if entirely immersed in water.

The heart and ring shake which are ever present in the Eastern hemlock are unknown in the B. C. variety. Possessed of exceptional ability to hold nails, resistant to splitting, it yields our finest common boards and excellent small dimension. As the size of the tree is less than that of other coast woods, so the knots are smaller and of better type.

When dry the wood is both odorless and tasteless and the lower grades of common lumber make excellent material for food containers and other types of boxes. The cuttings produced are of high grade and its strength, as compared to pine and spruce, combined with its resistance to splitting, have brought it an enviable reputation as a box material. Many millions of feet are utilized yearly for this purpose and considerable quantities of B. C. hemlock boxes have been shipped to the fruit growers of Ontario, proving highly satisfactory.

## Lends Itself to Interior Finish

It is, however, as an interior finish, in clear grades, that B. C. hemlock surpasses. Of slow, uniform growth and consequent even texture its grain is close and makes a splendid base for white enamel

finish. Because of its clean, bright, grey-white color, it lends itself to any color of stain which may be applied. French greys, the various oak, mission or mahogany finishes may be applied with unvarying satisfaction.

Because of its even texture, when flat varnish is used, the grain tones down giving a soft, quiet effect very pleasing and restful to the eye. In cabinet work, by using gloss varnish and rubbing with fine steel wool, the highest type of gloss or piano finish can be obtained.

The clear lumber of B. C. hemlock is of comparatively young growth and the surface hardens with exposure to the air. This characteristic enhances its value, particularly as flooring. Being resistant to any raising of the grain, clear hemlock provides the best of flat grain flooring. Within the Toronto offices of the British Co-

An average stand of British Columbia hemlock

lumbia Lumber Commissioner, No. 51 Yonge St., there has been installed the finest exhibit of Western woods to be found in Canada, or possibly, on the Continent. This exhibit has already been described in the pages of the "Canada Lumberman."

The walls of one of the rooms comprising this exhibit have been solid panelled with B. C. hemlock, using edge grain battens. The panel treatment is highly distinctive and effective and the result is a convincing proof of the beauty of this wood for interior finishing.

This impressive display is also a splendid tribute to its designer, Mr. Wm. Lyon Somerville, one of the most progressive and prominent architects of Toronto.

Previous to this work, Mr. Somerville had never seen B. C. hemlock installed as trim. Since he has designed hospitals at Hearst, Dryden and Orangeville, Ont., all of which are finished in hemlock. The Kapuskasing town planning project was designed by Mr. Somerville.

ville and the first unit of houses, costing \$135,000, are being finished throughout with hemlock, doors as well as trim. A community hall, church and other buildings are also projected and when built, will be finished in the same way.

The enthusiasm with which clear hemlock doors and trim have been received by Toronto contractors during the last few months has been nothing short of remarkable. The writer has talked to several contractors, some of whom made their first acquaintance with this wood in the Spring of last year, and without exception they have praised it highly.

They experimented first by using it to trim the second floors of moderate priced homes. Their satisfaction has been so complete that hemlock is now being used throughout in homes of moderate price and in the second floors of very expensive homes, hardwood generally being used on ground floors of homes of this class. Hemlock doors and trim have also been used to finish one or two apartment buildings, with the exception of the main stairway and front doors, which are of red oak. Some of these contractors have recently built homes for their own use and these homes have been finished in clear hemlock. In every instance, they have expressed satisfaction with the ease of cutting and nailing and the advantage of clear trim and doors which provide an excellent base for either white enamel or stained finish.

Because of similarity in coloring and grain tone cottonwood veneer panels are generally used in the making of hemlock doors. Where hemlock trim is used, any interior panelling is usually carried out in cottonwood veneer for the same reasons.

The proof of the pudding lies in the eating. B. C. hemlock has now passed the experimental stage and its value has been proven beyond dispute. Artificial prejudice has been overcome by concrete facts. The production of the hemlock of our Western forests has ceased to be a charge against the industry. When the transition is completed it will be in greater demand for the purposes to which it is adapted than any competing wood.

### Progressive Toronto Firm in New Location

There are many rapidly growing districts in Toronto and one of the most progressive is in the Danforth section where new homes and business blocks are springing up on all sides. Naturally there is a great deal of business in the lumber line in that area, and in order to take advantage of this rapidly-developing community, the Rastall Lumber Co., Limited, recently placed their new lumber yard and planing mill in an eligible location. They were formerly operating at 1072 Queen St. East, Toronto, and their new site at 2789 Danforth Ave., corner Dawes Road, is an ideal one. The plant represents the last word in construction and equipment.

The Rastall Lumber Co. have been in business for eleven years, being established in 1912 by Ross A. Rastall, who for a long period was manager of the Mickle, Dymont plant in Toronto. A few years ago Mr. Rastall retired from active executive participation in the business, and his son, R. A. W. Rastall, became managing-director of the Rastall Lumber Co. and has since guided the firm with good judgment and foresight.

The yard of the company, which some months ago was rough and uneven, has been carefully graded and well laid out. The buildings were erected by day labor and everything rounded rapidly into shape. Not only are the sheds, factory, etc., all new, but the equipment, as recently installed, is of the latest type. There are in the planing department, a planer, matcher, resaw, 26-inch planer, band saw, jointer, power feed rip saw and sticker, and in the sash and door department, a cut-off saw, variety rip saw, tenoner, sash and door sticker, chain mortiser, hollow chisel sash relisher and a belt sander. All of the equipment was supplied by Cowan & Co., of Galt.

The new mill is 85 x 98 feet in dimensions and close by is the power plant equipped with 150 h.p. Goldie & McCulloch engine and a John Inglis boiler. By means of a blower system installed by the Canadian Sirocco Co., of Windsor, Ont., all mill waste is conveyed to the furnace.

The Rastall Lumber Co. intend in the near future installing suitable dry kilns and erecting a new office and driveway on a 49-foot lane fronting on Danforth Ave. The company have good shipping facilities, a G.T.R. siding running through the main yard. There is a large storage shed convenient to the planing mill and the lumber, when taken from the machines, is easily conveyed by truck to the different racks on both sides of the storage room. The Rastall Lumber Co. have ample space across the street which they employ for piling rough lumber and their old yard on Queen St. East is also used at present as an auxiliary piling ground.

### Breezy Paragraphs in Short Shape

J. D. Manton, of Ottawa, is endeavoring to have a match factory erected in Sault Ste. Marie and has placed the proposition before the Board of Trade of that city.

The Mageau Lumber Co. have started operations in their new mill at Field, Ont., which replaces the one destroyed by fire some time ago. The plant will be operated night and day and it is expected that the output will be from 100,000 to 120,000 feet daily. The company have an unusually large number of logs which will be cut up into lumber.

The Abitibi Power & Paper Co., Limited, in recognition of the good work done by their employees in increasing the production of newsprint to over 500 tons a day, recently tendered them a banquet at Iroquois Falls, Ont. R. A. McInnes, manager of the company, presided and the event was a happy one, being attended by over 1,100 employees. Congratulatory speeches were made and an attractive programme carried out.

Injunction restraining the Western Timber Corporation Limited disposing of timber limits near Port Haney, B.C., which it agreed last February to sell to W. C. Webber of that locality for \$80,000, has been continued by Mr. Justice Murphy. On behalf of the company Mr. W. J. Baird applied to dissolve the injunction; but, at the conclusion of argument his lordship said he would read the authorities, the injunction continuing in the meantime.

The W. W. Powell Co., which operates a large match factory at Nelson, has taken over the sawmill at Cooper Creek, B.C., and has placed 20 men at work turning out lumber for the factory. In addition, the newly incorporated Nelson Lumber & Manufacturing Company, has taken over a mill which has been idle in Nelson; is installing machinery, and will within the next two weeks, begin a large contract of sawing logs for the match block plant.

Thirty-nine employees of Kirkland Lake, Ont., camp who were burned out several months ago, recently filed their names with the clerk of Teck Township in an effort to get sufficient lumber from the Northern Ontario Fire Relief Committee, their intention being to erect houses in Kirkland Lake. The families will, however, not be able to get the lumber as the committee has ruled that no lumber will be granted for building purposes outside the fire zone.

The St. John River recently went on the rampage and floods did great damage in New Brunswick. At Fredericton, the capital city, it is estimated that the loss will be from \$5,000,000 to \$10,000,000. Millions of feet of lumber floated down the river unchecked and the boom companies were unable to swing booms. This lumber will, probably, run out in the Bay of Fundy and much of it will be a total loss. Twenty-one provincial bridges were also swept away by the flood.

That 743,462 acres of forests were ravaged by 1,608 fires, which broke out in the course of last year, is the astounding fact brought out by the report issued recently by Hon. Mr. Mercier, minister of lands and mines. The report indicates that in May alone, last year, 552,506 acres were attacked by fires and that though the total area affected was less by a few acres than the previous year, the losses are said to have been heavier. The cost of fighting the fires reached over half a million dollars.

Timber cruising in the Algoma district will start later this year than usual and will not be under way until the end of May. A. H. Huckson, Crown Timber Agent, of Sault Ste. Marie, is in charge of the men in the work of cruising. Extensive work will be done on the Mississauga forest reserve and townships to the north as well as along the line of the Algoma Central Railway. During the past few days fire rangers have been despatched to many points in the Algoma and Sault division to take up their duties at the different stations.

James Thompson, of the Thompson & Heyland Lumber Co., Toronto, recently delivered an interesting address before the Kiwanis Club, of Toronto, on the resources of Canada. Mr. Thompson made special reference to the country's resources in paper and pulpwood, and declared that the Government was away behind the times in its policy of reforestation. In Europe to-day, the speaker stated, an up-to-date system prevailed to preserve the forest, but if the present policy continued in Canada, even this generation would live to learn that our forests could not continue for ever.

P. O'Brien and W. J. Murphy have engaged in a partnership under the name of the O'Brien Agencies, 421 Transportation Building, Montreal, as forwarding agents for export lumber shippers. Mr. O'Brien was for several years manager of the Montreal office of W. & J. Sharples, Limited, Quebec, exporters, and naturally has a wide acquaintance with the export trade. Mr. Murphy is an experienced and practical lumberman, carrying on business as the William J. Murphy Lumber Company. The O'Brien Agencies will thus act as agents and also carry on a wholesale lumber business.

## Major Herron Starts in Wholesale Line

R. B. Herron, Toronto

Major R. B. Herron has embarked in the wholesale lumber business in Toronto with offices at 33 Adelaide St. West. He will specialize in Ontario softwoods and also piling, cribbing and round timbers. Major Herron is well known in the lumber line and was until recently in charge of the manufacturing operations of R. B. Herron & Co., Tionaga, Ont., with which firm he still retains his interest. He has been in the lumber game all his life, starting in as a lumberjack and becoming a camp foreman. One of his first important posts was taking out a large quantity of logs for J. R. Booth in the Temiskaming district. Later he had charge of one of the big camps of Gillies Bros. after which for a couple of years he supervised the Temiskaming operations of

the Rideau Lumber Co. Major Herron next undertook several large contracts for supplying the piling, trestle and bridge timbers for the Canadian Transcontinental, the T. & N. O., the C.P.R. and C.N.R. and served for two years in France with the 7th Canadian Railways Troops, commanding one of the companies. On his return to Canada, in company with others, the firm of R. B. Herron & Co. was organized and has since been operating extensively at Mileage 122 and 125 on the Canadian National Railways west of Sudbury, the latter mill often being referred to as the "soldiers' sawmill" owing to the number of returned men employed there. During the past winter the company cut a large quantity of pulpwood for the Spanish River Pulp & Paper Mills.

## Lumber Companies at Pembroke are Busy

The Pembroke Lumber Co., Pembroke, Ont., have resumed operations and the Colonial Lumber Co. intend starting their plant in Pembroke about the middle of the present month. The Pembroke Lumber Co. will work a double shift this year. In former years the night gang was taken for granted, but during the war it was discontinued, and has not been resumed until the present. A motor has been installed to run the big gang saw and other improvements have been made which will considerably increase the daily output. About 400 men will be employed and the season's payroll will be in the neighborhood of \$200,000. The company will cut about 30,000,000 feet this year.

The Colonial Lumber Company's mill will also work at full capacity throughout the season. About 250 men will be engaged and the cut will be in the neighborhood of 21,000,000 feet. The payroll for the season will amount to about \$125,000.

## Fear Timber Famine in Near Future

A report just issued by the Forestry Commissioners, London, Eng., says the measures which are being adopted by various foreign countries indicate the existence of widespread apprehension of a timber famine at a no distant date, and also expresses the opinion that the results of such a famine would be more disastrous for the United Kingdom than for any other country.

The demand, continues the report, is constantly increasing, and virgin forests are being worked out far more rapidly than was expected, and adds: "There can be little doubt that the Government will in the near future have to choose between a resumption of a full planting program adopted by Parliament and taking a risk which no other country is prepared to take."

## Shantymen's Christian Association Elects Officers

At the annual meeting of the Shantymen's Christian Association, held recently in Toronto, the following officers for the coming year were elected,—President, H. B. Gordon, Toronto; vice-president, J. J. Gartshore, Toronto; secretary-treasurer, W. H. Adamson, Toronto; general superintendent, Wm. Henderson, Toronto; assistant superintendent, W. A. Fuller, Victoria, B.C.; assistant superintendent, T. M. Sutherland, Winnipeg; field superintendent and evangelist, L. R. MontGomerie, Detroit, Mich.

The Board of Directors is composed of the officers and the following:—

Dr. W. H. Howitt, Toronto; R. Wightman, Toronto; J. H. S. Kerr, Toronto; Jno. Wickson, Toronto; S. T. Smith, Winnipeg; W. T. Nobles, Edmonton; J. F. Bullock, St. John, N.B.; R. W. Sharpe, Vancouver, B.C.; C. A. Erickson, Chicago, Ill.; R. O'Brien, New York, N.Y.; W. O. Andrews, St. Louis, Mo.

The Shantymen's Christian Association is an organization of Christian men engaged in carrying the Gospel to lumber and construction camps, mines and rural communities all over the continent. The Association is about to issue a weekly magazine which will be known as "The Shantyman." This will be a connecting link between the friends of the organization and the workers, and also provide helpful and interesting reading for the men in the camps and isolated places. William Henderson, general superintendent of the S.C.A., Toronto, is the editor.

## Some Standard Thicknesses Recommended

Recommendations on sizes of so-called 1 in. and 2 in. lumber have been made by the Forest Products Laboratory, of Madison, Wisconsin, to the Central Committee on Lumber Standards. The recommendations are as follows and will be found interesting:—

**One-Inch Boards.**—It is believed that 13/16 inch is the minimum thickness which will give a reasonable degree of satisfaction for requirements of use, although an increased thickness will give greater service. It is also recognized that under best manufacturing conditions 13/16 inch is the maximum obtainable from boards cut one inch thick in the rough green condition. Furthermore, economic lumber distribution and forest conservation both demand that inch lumber when dressed be the maximum obtainable from the rough boards as sawed from the log.

Therefore, 13/16 inch is recommended as the finished dry thickness for so-called one-inch boards.

**Two-Inch Dimensions.**—It is believed that lumber 1 5/8 inches thick will satisfactorily meet the strength requirements of joist and studding, which uses govern the thickness of dimension; and that sizes in excess of 1 5/8 inches are wasteful. Therefore, 1 5/8 inches is recommended as the finished dry thickness for so-called "two-inch" dimension.

**Widths.**—It is believed that the dressed widths of one-inch lumber and two-inch dimensions should be the maximum obtainable under best manufacturing conditions. These are dressed widths of 3/8 inch scant on widths up to 7 inches and 1/2 inch scant on wider widths, and they should be the same nominal size for both one and two-inch lumber. Therefore these widths are recommended.

## Noted Manufacturer Joins Silent Majority

P. B. Yates, founder of the P. B. Yates Machine Co., Beloit, Wis., Passed away recently in a Chicago hospital where he had been undergoing treatment for some weeks. Pneumonia, following a general break-down, was the cause of his death.

Mr. Yates was 69 years of age, and the great industry which he built up is a credit to his genius, foresight and management. He began in a small way with only one model of machine and with a mechanical force of thirteen and a sales staff of one man. Today 1,200 persons are employed at the plant in Beloit, and 500 more at the Canadian factory in Hamilton, Ont. Mr. Yates was practically the sole owner of the business, and the only surviving member of his family is his daughter, Florence, now 15 years of age.

The management of the P. B. Yates Machine Co., announce that the plant will continue operations in the manufacture of woodworking machinery under the old policies without change.

## Death of Veteran Quebec Lumberman

W. D. Brown who passed away recently at his home 262 Grande Allee, Quebec, was widely known in lumber circles, having been engaged for half a century in the business. He was one of the members of the firm of J. & W. D. Brown until about four years ago when after the death of his brother, the present company of W. D. Brown & Sons was formed.

Mr. Brown was a man of integrity and candor, with a generous disposition and broad views. His wife predeceased him about twenty-five years and he is survived by his two sons, Collin and Fred Brown, both of whom are connected with their father's business.

The late Mr. Brown always took a great interest in military movements, having been a member of the Queen's Own Hussars at the early age of 18. Possessing a predominant love for animals, especially horses, he received the appointment of Rough Riding Sargeant in the W.O.C.H. and later attained the rank of Major. He was also a Fenian Raid veteran.

## Coast Mills Kept Busy on Orders

A. S. Nicholson, Toronto

"Conditions at the Coast in the lumber trade are reasonably brisk. The mills are not now receiving a large volume of business from any one source but as the result of large orders accepted early in the year, they find themselves fairly busy," said A. S. Nicholson, of Terry-Nicholson-Cates, Toronto, who recently returned from an extended business trip to the Pacific Coast where he visited a large number of plants and conferred with the western representatives of the firm. Mr. Nicholson added that, unfortunately, these orders do not carry as high a price as recent bookings. The mills, however, are obligated and decline to accept new business in large volume until these obligations are completed or nearly so. Prices on new business will be

governed entirely by the demand. In the course of further conversation Mr. Nicholson stated that conditions at the Coast have changed considerably as the result of water shipments. It is estimated that 75% of the lumber is going from the Coast by water to the Orient and to the Southern Pacific Coast; some of course, to the Atlantic Coast, but not in any large quantity as yet. This places the tide-water mills in a more favorable position than the inland mills which are compelled to rely on rail shipments.

In the Mountain district in the interior of B.C. where manufacturing is conducted very much as here in the East, conditions have not materially changed. There will not be as much lumber produced in the Mountain district as heretofore because of the fact that during last year and the year before the mills were not able to get enough for their lumber to cover their cost. Some have to discontinue operating and others have been forced out of business. It is only the mills that are very favorably situated so that their logging costs are low that have been able to survive.

On the whole the manufacturers in B.C. have not a very encouraging proposition, according to Mr. Nicholson. They have labor troubles such as are not known in the east. The I.W.W. is still a factor to contend with in the logging camps and is causing serious trouble at the present time which makes logging costs very high and hard to manage. On the other hand the nearest market of the Mountain mills—the Canadian Prairies—is sending them little or no business at present and it does not look as if there will be any prairie trade offering for some time to come. One would certainly have to be a great optimist not to admit that conditions in the Prairie provinces, especially in the Southern part of the provinces, are bad.

Insofar as British Columbia is concerned, business largely centres in Vancouver and the prospect for local trade there is good, perhaps better than any other place in Canada, with the exception of the Eastern Cities. There will be a large volume of B.C. lumber and shingles shipped to Ontario this year, but it will consist principally of lines that do not come too closely in competition with stock produced in Northern Ontario and Quebec.

## Large Consignment in Car of Lumber

The Columbia River Lumber Co., of Golden, B.C., shipped on March 24th last a car of stock from Golden to Parkdale, Ont. It was an ordinary 36 foot box car, C.P. 205289 and contained 40,342 feet of lumber, comprising 4,395 feet of 1 x 6, No. 1 common cedar V. & C. V. 2 S., and 35,945 feet of 1 x 4, No. 1 common cedar, V. 2 S. This is a big load for an ordinary 36-foot car, and the Columbia River Lumber Co. are wondering if it does not nearly constitute a record cargo. The "Canada Lumberman" would like to hear of other heavy shipments and the material loaded, in order to see which concern wins the championship in the matter of car consignments.

## New Hardwood Plant is Kept Busy

Since the saws started turning at the bidding of a 50 h.p. electric motor about two months ago the Star Flooring Co. located at 618 Brock Ave., Toronto, has not had a single idle hour. The new concern specializes exclusively in the production of carefully manufactured  $\frac{3}{8}$ " oak flooring and has a complete modern flooring unit. All the machines have recently been installed and are now running

at full capacity. They include the following: American flooring machine installed by the American Woodworking Machinery Co., of Rochester, N.Y. This planes both surfaces and tongues and grooves at a speed of 60 ft. per minute. The remaining equipment was installed by the Canada Machinery Corporation, of Galt, Ont., and includes an end matcher, a self feed resaw and two lightning cut off saws.

This equipment, in the hands of expert operators, is turning out 4,000 feet of finely matched oak flooring daily and the company is finding buyers as fast as the flooring is produced. Selling direct to the contractors, the Star Flooring Co. has a ready market for its product.

The firm has storage room in the basement and on the main floor for about two cars of rough material which is purchased, already kiln dried. The personnel of the company includes four partners, F. E. Harper, Sr., Earl Harper, Ralph Harper and A. E. Bazeley and all are actively employed in the business.

## New Name for Pembroke Industry

Some time ago Bryant and May, the largest manufacturers of matches in the British Empire, acquired control of the Canadian interests of Maguire, Paterson & Palmer, Pembroke. The company manufactures splints and matches. Now a change has been made in the name and the concern will in the future be known as the Canadian Splint & Lumber Co., Limited.

George W. Paton, of London, England, is president of the company, succeeding Sir Alex. Maguire; George Chahoon, president of the Laurentide Paper Co., Grand Mere, Que., is vice-president. Wm. A. Fairburn, of New York, is managing-director and A. G. Woodruff, of Pembroke is the secretary and general-manager. The directors are E. A. Dunlop, D. C. Snead, Sir Alex. Maguire and D. P. Maguire.

## Electric, Diesel and Steam Logging

The increased use of electricity in logging in California can best be gauged by the statement that 20 electric engines will be working this summer. It is interesting to observe in the case of The Pacific Lumber Co. installation that instead of employing the usual two-speed shift on the yarders and loaders, the change is attained by substituting motors with variable speeds. The innovation is being watched with interest.

California offers an excellent opportunity for the employment of electric log haulage due to the close proximity of electric power lines to logging operations. Cost of electric power is less than either coal, wood or oil. The elimination of the need of providing a water supply line and the lessened fire hazard are two important factors in favor of electrically operated engines where commercial power companies are located so as to make power readily available.

The upkeep of the electric motor should be less than that for steam boilers. The first cost of the electric donkey is greater than that of the steam engine, which must be reckoned in calculating depreciation. The electric logging engine has come to stay. Their use will increase as time goes forward. Progress is being made in the development of the Diesel engine with a view to adapting it to logging uses.

If these claims can be successfully sustained, the Diesel engine may find a steady and increasing field in the logging industry.

Steam has its advantages in resiliency and a command of reserve power. There is a place and a need for these three motive powers in logging and no single type possesses the combined advantages of all.

## Wholesale Lumbermen Hold Enjoyable Dance

The dance which was held under the auspices of the Entertainment Committee of the Wholesale Lumber Dealers' Association at the Metropolitan Assembly Rooms, College St., Toronto, on Friday April 27th was attended by about fifty couples and thoroughly enjoyed. Mitchell's orchestra provided splendid music and the floor was in excellent shape. The evening was a delightful one throughout and an entertaining feature was some legerdemain feats performed by Tom Bowyer who recently gave an exhibition of his skill in this line before the wholesale lumbermen at their last regular meeting.

The Entertainment Committee deserves every credit for the way in which the function was carried out, and arrangements are now being made for the annual picnic of the wholesalers which will likely be held at the Lake Shore Country Club during the end of June. L. D. Barclay is the energetic chairman of the Entertainment Committee and the other members are,—A. Smith, R. S. Plant, J. R. Carter and J. F. Wachter.

## BUDGET OF BRIEFS FROM NEAR AND DISTANT POINTS

Fire totally destroyed the planing mill of W. H. Slight at Stayner, Ont., recently. The loss is estimated at \$13,000 and is partly covered by insurance.

For the purpose of encouraging reforestation throughout Eastern Ontario 300,000 pine seedlings are being planted at the farm of the Kemptville Agricultural School, to be available for distribution to farmers next year. Upon ground belonging to the farm which is unfit for cultivation, 13,000 small trees, including pine, walnut, butternut and soft maple, are also being planted in co-operation with the forestry branch.

The New Way Flooring Company, Kitchener, Ont., is a new firm recently organized to lay, finish, and polish hardwood floors. Capital \$40,000.

Brewster Loud, of the Brewster Loud Lumber Co., Detroit, Mich., was in Toronto recently calling upon the trade.

Doolittle-Russell, Limited, builders' supply yard, located on the People's Brewery property at the north east end of Hamilton, Ont., are erecting a galvanized shed, a two car garage and a stucco office.

The A. E. Gordon Lumber Co. are now occupying their spacious rooms 1008-1009 in the new Federal Building, corner Richmond St. West and Sheppard St., Toronto. The Canadian General Lumber Co. have enlarged quarters at 1004-1005-1006 on the same floor. Other lumber concerns which will shortly move to this well-equipped office structure are:—R. C. Chesbro, Rooms 619; Larkin Lumber Co., 625-626; Leak & Co., 525-526; J. T. Todd, 620 and W. Y. Lloyd, 1023-1024.

Maple trees, a commemorative gift to the province of Quebec, are to grow on the Canadian battlefields of France and Belgium. Arrangements have now been completed by Hon. Honore Mercier, minister of lands and forests, to forward in the fall, which is said to be the most suitable season for such shipments, a large quantity of plants coming from the provincial government in Berthierville, Que.

B. Lewis and L. Cuttle, of Belmont, N.S., have been operating in the Mt. Thom district, N. S. They have already cut quite a large quantity of lumber and have over a million feet yet to cut.

Between forty-five and fifty million feet of logs are expected to be handled by the Southwest Miramichi Log Driving Corporation this season, according to estimates given by J. W. Brankley, Chatham, N.B. Officers of the Southwest Miramichi Driving Company elected last week are,— President, J. W. Brankley, Chatham; secretary, R. W. McLellan, Fredericton; treasurer, W. P. Eaton, Chatham. Estimates from other sources recently placed the quantity of logs likely to come out of the Northwest Miramichi this year at 35 million feet.

J. A. Rowland, of the Sprague-Rowland Lumber Co., Winnipeg, is moving to Toronto where he will take up his permanent residence. His company is opening an office at 620 Federal Building and will specialize in Western white pine and factory materials. D. B. Sprague will remain in charge of the Western Canada end of the business. Mr. Rowland has been engaged in the lumber line for nearly twenty years and is well known to the trade in Ontario.

Norman C. Hocken, of the Hocken Lumber Co., whose plant is located at West River, Ont., spent a few days in Toronto recently, and states that the mill has got off to a good start and will have an unusually large cut this season.

The shingle mills at Dalhousie, N.B., which have been closed down for the past two years, have reopened.

Isaac Hale, who is a member of the W. Mark DeCew Lumber Co., Vancouver, B.C., who are specializing in Western white pine, was a caller upon the lumber trade in Toronto and other cities during the past few days.

S. J. Staniforth, of the Fassett Lumber Co., Fassett, Que., spent a few days in Toronto lately on business.

Charles O. Maus, of South Bend, Ind., was in Toronto lately and reports that the trade outlook is exceptionally good.

William C. McDougall, manager of the Twin Falls Lumber Co., McDougall's Mills, Ont., transacted business in Toronto during the last few days.

R. G. Chesbro has removed his lumber offices from the Bank of Hamilton Building, Toronto, to 619 new, Federal Building where he has much larger and more commodious quarters.

It is reported that the C.P.R. is desirous of establishing a hard-

J. Herbert Irving, Buctouche,

Newly Elected Directors of New Brunswick Lumbermen's Association

T. H. McEvoy, Dalhousie,

wood industry in New Brunswick. The exact location has not been settled. It is understood that J. M. Woodman, district superintendent of the C.P.R., recently held a conference with several representative eastern lumbermen, all of whom approved of the idea and believe that something will come out of the proposition.

Chief Scaler A. T. Murchie lately returned from an official tour of Restigouche County, N. B., where he conferred with all the scalers. He reports that the cut on Crown Lands in the county totals about 90,000,000 feet, which with the cut on granted lands, makes a grand total of about 125,000,000 feet.

A new sawmill is in the course of erection at Trois Pistoles, Que. The building will be one storey of frame construction. N. Damours is the owner.

Fire caused \$5,000 damage and destroyed the sawmill of Mendoza Julien at Barrante, Que., recently. The owner expects to rebuild.

Sash, door and planing mill operators of Ottawa were notified recently by the agent of the Inside Woodworkers local of the District Council of Carpenters that bench hands and machine men will demand a 20 per cent increase in wages.

Senneterre Lumber Co., Limited, Quebec, Que., is a new firm recently formed to manufacture and deal in all kinds of forest products. Capital \$20,000.

J. R. Booth, Ltd., Ottawa, have started excavations for the erection of a new turbine building. The structure is expected to be finished about July.

York Mills Builders' Supplies Co., Limited, Toronto, was recently incorporated to manufacture and deal in lumber, shingles, poles, fence posts and other similar products. Capital \$40,000. D. G. Joy and W. Forsyth, are two of the incorporators.

A large party of cruisers have been surveying limits in the Gatineau district, in connection with a project for building a large pulp and paper mill, in which English capital will be invested, should the plans go through. These include the development of a water power.

The Minister of Lands and Forests for Ontario is calling for tenders for the right to cut timber in the township of Irish in the district of Algoma.

The first lumber shipments representing a million and a half feet out of Ottawa ports were made recently when five barges left with cargoes for Montreal and Burlington, Vermont. Part of the shipment was destined for England.

J. C. Scofield, of Windsor, has been appointed chairman for the coming year of the Insurance and Workmen's Compensation Committee of the Ontario Retail Lumber Dealers' Association, succeeding Walter C. Laidlaw, of Toronto, who has filled that position for a number of years and recently resigned.

# Lumber Trade Conditions Reviewed

## Montreal Lumber Conditions are Active and Firm

What is the immediate course of the market? Will prices further advance, or may dealers expect a reaction? These are questions which many wholesalers and retailers are asking. The expressions of opinion differ considerably—and are, no doubt, colored by the temperament of each individual. Many believe that prices will even advance until the new cut comes on to the market, and then we may look for a moderate set-back. On the other side, there are those of a more optimistic nature who venture the view that the new cut will have little or no influence on values, provided, of course, there is a fair demand. This type of dealer points out that the market is now almost bare of stock and that the new lumber will, therefore, only take care of ordinary requirements, not taking into account the possibility of a strong call for building and industrial purposes. Some wholesalers have received several substantial orders for the new cut at very good prices.

A percentage of retailers are holding their hands in the matter of buying. They have seen prices continually advancing but have not been inclined to take many risks. According to one large dealer, retailers as a rule are selling too low, that is, they are not asking prices which represent replacement values, and are, consequently, not taking the full advantage of a rising market.

The market generally continues to be active and firm. Wholesalers state that the chief difficulty is to secure desirable stocks, and that the mills have very little on hand, in fact in some lines they cannot get supplies.

There is promise of an excellent building season, provided the cost of supplies does not reach too high figures, and if the city and province does not lose many more skilled men to the States, lured there by the excessive wages paid under the stimulus of the boom. The permits taken out last month amounted to \$6,913,572, as compared with \$2,038,874, in the corresponding month last year. The striking increase is explained by the fact that three permits each exceeded the million mark,—the new Court House of the Provincial Government, \$2,364,000; a new apartment house, to be the largest in Canada, \$1,350,000, and a new office building, \$1,000,000. For the first four months of the year the total was \$9,720,000, as against \$3,752,107 in the corresponding period in 1922. Some further advances in wages have been made and there seems a disposition for employers and men to get together.

The exports of pulpwood for March totalled 113,493 cords, valued at \$983,436. For the fiscal year ended March 31st, the total was 1,096,462 cords, of a value of \$10,755,655, compared with 825,967 cords and \$9,879,150, for the previous year. The consumption is going on at a great rate owing to the heavy demand for newsprint, and with the additions to paper mills and the contemplated new plants, this consumption is likely to be accelerated.

## New Prices at St. John Show Several Advances

There is considerable fluctuating in the prices of lumber as a result of the heavy demand and the fact that unprecedented conditions prevailing may keep local saw mills from operating for some weeks. A new price list shows that small sizes of rough merchantable spruce has advanced from the old quotation \$28 to \$33, while a corresponding increase is shown for dressed one edge. Dressed spruce on all four sides remains at \$34, but sizes from 2x 6 to 4 x 6 shows an increase of four dollars. Sizes 2 x 9 to 7 x 7 advanced two dollars, while refuse boards, deals and scantlings advanced from \$20 to \$23.

The great demand for laths continues and as a result the price has been steadily advancing until it is now \$7.50. Very heavy orders are being filled here for points in the New England States and Long Island and recent sailings shows shipments of over six million.

There is still a good demand for shingles, but the stock has been rapidly depleted and at present is nearly all cleaned up. However, as soon as the mills resume operations all orders will be quickly attended to.

One of the features of the advance in lumber prices may or may not be attributed to the fact that mill employes in St. John are holding out for an increase in wages. Last season a sixty cent per

day cut went into effect and although an increase of ten per cent was offered it was not acceptable. If the men persist in holding out for increased wages the additional expense will have to be borne by the consumers as the margin on most lumber today is small and manufacturers would be unable to continue operations without a loss.

Another cause for an advance may result from the tremendous loss of logs, which has resulted from flood conditions. Millions of feet have broken away from the booms and even if the majority are recovered their salvage will add to the original cost of operations.

The overseas demand for lumber has fallen away off, but this is more than offset by the United States requisitions. The heavy demand for laths is undoubtedly due to the enormous building operations being carried on in the United States. If this continues it is expected that there will be a good demand for various sizes of lumber.

The recent flood conditions, which have disrupted the operations of the C.P.R. and the Maine Central Railway has caused a set back to local shippers. They have large orders to fill, but as there is no freight movement a tie up, at least temporary, has resulted. These orders will be rushed forward as soon as conditions return to normal.

Mill owners along the St. John river front at Indiantown have to face an additional expense due to the abnormal freshet. Piles of lumber have been undermined by the rush of water and have toppled over and crews of men have been engaged keeping the manufactured product from floating away. When the tide recedes it will necessitate repiling which all adds to the overhead expenses.

The mill owners have a considerable quantity of stock on hand, but from indications mills may not start for another month and if such is the case their supply, in some lines at least, will be greatly depleted.

Lumber dealers when interviewed spoke optimistically on the conditions of the market at the present time. They pointed out that the call for some dimensions was so great that it was impossible to supply it. Spruce, they claim, is greatly in demand.

The expense of getting logs out of the woods last winter was higher than anticipated. This was due to an exceptionally hard winter, excessive fall of snow, the price of labor, and feed for the horses. It is estimated that it cost from \$1.50 to \$2.00 per thousand more than was anticipated last fall.

Recent reports received here says that the Boston market for dimension spruce is showing the vigor expected of it at this season of the year.

There is a report current that one St. John dealer recently disposed of 1,500,000 feet of narrow random at \$42 delivered on the Boston rate of freight less commission. The price for scantling from this province in the United States is quoted at \$41.

## Conditions in Ontario Strong With Good Outlook

Conditions in the lumber market remain about the same. There is a quiet, hopeful tone pervading all ranks and some disposition to look into the future and speculate on what will be the outcome when new dry stocks arrive on the market. Most sawmills are now under way for the season, having got off to a good start during the past few days. A number in Northern Ontario have not yet been able to commence cutting owing to the ice being rather slow to break up. There is an ample supply of men, it is reported at most milling points, and in some cases advances in wages have been granted from 10 to 15 per cent.

Of course, the strength of the lumber market depends upon two factors, building operations and industrial activities. Whether the extensive structural schedule which is being carried out in the larger centres both in Canada and the United States will extend beyond fall months, is problematical. Some authorities declare that energy will have spent itself by that time and the feverish demand, which has been existent for certain classes of lumber so that a shortage has been created in many widths and thicknesses, will have disappeared.

The next month or two will tell the tale whether the present values in lumber will be maintained. During the last six months there has been an average increase of \$6.00 per M in Jack pine; \$6.00 to \$8.00 in hemlock; \$8.00 to \$10.00 in spruce and from \$5.00

to \$20.00 in white pine according to the grade which is being sold.

There is quite a scarcity of 2 x 8 and 2 x 10 in 10 and 16-foot lengths of jack pine and hemlock. Many yards are out of odd sizes completely and are scouring the market for supplies, the lumber in some cases passing through three or four hands before the wants of the buyer can be met. During the present month retail yardmen are not buying heavily as they are pretty well stocked up. Purchasing is being done on a cautious basis, having in view the conditions prevailing at the present the building situation, the new crop of lumber, augmented production and the trend of industrial affairs.

It is reported that the demand in the New England States which has been the chief outlet for Canadian spruce and white pine during the past months at very firm prices, has shown some easing up of late. This does not, by any means, mean a depression in the market, but just now there is a disposition to proceed cautiously rather than feverishly, and, in case values should go down, there will not be the reaction and boomerang that there was in the fall of 1920 and the beginning of 1921.

So far as B. C. forest products are concerned, timbers have been in fairly brisk demand. There has also been a call for 3-inch plank, especially in sizes 3 x 12 and 3 x 14 in long lengths. Transit cars of boards and shiplap are not in keen demand and some are being offered at sacrifice prices. There is very little demand for commons in the eastern market unless prices drop. The margin between Ontario woods and Coast commons is in favor of the former, and, as a consequence, the eastern lumber merchant will not bring the latter in any large volume except, possibly, a consignment in mixed cars.

The yard men in Western Ontario are pretty heavily stocked with forest products of all kinds at the present time, according to the latest information, but material is beginning to move and business is gradually getting better. It is declared that the Ontario farmer has not been securing prices for his product commensurate with their cost, and not a few yeomen have experienced difficulty in paying their bills. Collections have been rather slow.

Several transit cars of western stock are offering all the time and it is thought that the demand for these will pick up now that the building season is going full blast. Some eastern representatives are pushing B. C. hemlock clears and making an effort to have this wood used for interior trim. It is understood that one contractor will employ this material for finish work in some twenty or twenty-five houses which he has under way.

In reference to operations in the Sudbury district, one leading lumberman stated recently that nearly all the mills were now running although the ice had been very late in disappearing. There was high water at many points even if a great deal of rain had not fallen. Common labor, he reported, was quite plentiful but skilled labor and men for the drives were rather hard to procure. \$2.50 a day and board was being paid for river men but there was a disposition on the part of some not to accept this figure, and wages might go higher. So far as ordinary help around the mill was concerned, 30 to 40 cents an hour was the rate, which was an increase of 10 to 15 per cent. over last year. Table board remains about the same as last season.

### Ottawa Trade Shows Some Slowing Up

Conditions in the Ottawa lumber market during the opening period of May were only fairly satisfactory to lumbermen and wood-working plants, due to the late spring and the delay in the opening up of new building operations. The volume of trade both domestic and foreign was reported to be not as large as had been expected.

There was a fairly good volume of business carried on with the American yards during the closing part of April and the first few days of May, but the outlook in this direction was not as hopeful as it previously had been. The domestic trade was also slacker than what had been anticipated, and though new building as reflected by the building permits in April promised well, the actual start of several new projects was delayed on account of the lateness of the spring.

Though the volume did not increase to any noticeable extent prices remained firm. The first shipments of lumber cargoes by water left Ottawa on May 4th., they being from the John R. Booth Company, Limited, and the Gatineau Company Limited. The shipments contained about one and one half million feet. That of the Booth Company was composed mostly of deals, which was consigned to the English market. The shipment from the Gatineau Co. Ltd., went to northern New York State.

Conditions with the woodworking plants did not show much general change. The request of the members of the woodworkers union for higher wages, was not dealt with by the heads of the wood-working factories and plants. Most of the plants reported that their business was slow owing to the lateness of the spring, and that they felt they had lost a month or six weeks of usual good business.

### Mr. Levie Speaks on Conditions Overseas

John Levie, Quebec, P.Q.

John Levie, vice-president of W. & J. Sharples, Limited, who proceeded overseas to the United Kingdom at the end of last January to take observation of the lumber market, visit the firm's agencies in the British Isles and dispose of lumber on behalf of the interest of his firm, returned to Quebec at the end of April, looking fine and well pleased with the result of his trip. Mr. Levie is a modest man when it comes to an interview. Though reluctant to talk for publication, Mr. Levie admitted that, while conditions were not as yet near normal in the British Isles, on account of the continued political atmosphere, the Ruhr difficulty and the depreciation of exchange, he had succeeded in doing a better business than when he went abroad in 1922.

and obtained better prices for the lumber he had disposed of.

It would appear, however, from the latest reports received by Quebec lumber firms both by mail and cable from their British agents, that a feeling of nervousness still prevails among the United Kingdom purchasing interests who vie with each other in a spirit of cautiousness. It is, however, pointed out that April is a month of usually small doings in the timber trade and lumber line generally, but there is a strong hope that by the middle of May things will undertake a change for the better that will generate more life in business to merit confidence.

Looking at the continent of Europe and at the political and economic conditions in the large wood-consuming countries, the export agents of the Canadian firms in England say they are at a loss to prognosticate how the lumber business will be affected. It is in the meantime, admitted in Great Britain that, in so far as the trade with Canadian lumber interests are concerned, there are two formidable factors to be removed, the settlement of the reparations question and lower ocean freight rates by the regular steamship lines. Although there is a strong desire on the part of the press and people of England to trade more generally and generously with the Dominions, there is no sentimentality in business when it comes to the price of the goods, and this applies to the Canadian lumber trade with Great Britain, as it does in all other trade commodities.

### May Result in Renewal of Confidence

In the present the wood imported by the British firms from Sweden and Finland is almost fifty per cent cheaper than the prices of Canadian wood, and it cannot be expected that the British importer will purchase his lumber exclusively from Canada under such existing circumstances. The British steamship companies in control of the ocean cargo rates are aware of these facts but, strengthened as they are in a combine, they will not listen to any reasonable argument as long as they can obtain the cargoes shipped from Canada, and do not or will not understand that by coming back to pre-war rates they could more than double their cargo carrying business in the St. Lawrence route.

Expert banking economists, who have their vision constantly focussed on conditions, are agreed that if the France-German difficulty can be settled in the next couple of months, as is indicated by a close study of the situation, it will result in a renewal of confidence among the financial interests, which is bound before many months will have passed, to bring about a reaction in interchange of trade and a commencement for the stabilization of exchange to insure a boom in European business. In England where the Student of economy is centered and watching closely the France-German question, it is felt, with a marked degree of confidence, that Germany cannot much longer bear the economic strain placed upon her industrial resources in the Ruhr by the Allies, and sooner or later will have to forego her stubborn obstinacy and seek to open negotiations with France and the Belgians, who, also in bondage by the economic strain on their resources, will welcome an approach for a prospective settlement.

These few reflections, the outcome of mathematical deductions from the banking and other financial interests of Great Britain, go to show while the prospects are unsettled, they are not bad and that there are good chances for the Canadian lumber trade in the United Kingdom during the summer. But there is nothing to show that the trade will be a safer one this year, or is it possible to foretell if there

On the left is shown a convenient tally card which is used by McLachlin Bros. of Arnprior, Ont. On the right is a diagram illustrating that increased price of lumber has added very little to the relative cost of building

## Forestry Director Retires From Position

R. H. Campbell, Ottawa,  
Director of Forestry

R. H. Campbell, of Ottawa, who is director of forestry, has retired from that position after sixteen years' successful administration. The staff of the Forestry Branch, Department of Interior recently tendered a farewell supper to their chief. E. H. Finlayson, acting director of forestry, presided and spoke in the highest terms of Mr. Campbell's service to the branch and his personal work. The guest of the evening was presented by the Dominion Forest Service with a large silver bowl, suitably inscribed, and with a handsome club bag on behalf of the staff who are resident in Ottawa. Mr. Campbell made a grateful reply, expressing appreciation of the many years' delightful association with his loyal staff. He bespoke their co-operation for

his successor, whoever he might be, and stressed the importance of forestry work. Mr. Campbell was born at Strathroy in 1867 and, entering the Department of the Interior when twenty years of age, rose steadily from post to post. Early realizing the importance of forestry, he devoted much attention to the study of that subject, especially as it related to Canada. He was one of the first members of the Canadian Forestry Association which was formed in 1900, and was elected assistant secretary and treasurer. In 1907, on the resignation of E. Stewart, now of Toronto, who was the first superintendent, Mr. Campbell was appointed superintendent of forestry, a title subsequently changed to director of forestry. By hard work through subsequent years he succeeded in building up his branch. The organization of the forest reserves has also been brought to a high state of efficiency, and the task of protecting the forests from fire—both inside and outside of the reserves—has been undertaken to a degree unthought of a few years ago.

## New Plant of Mr. McKee in Operation

The new plant of W. J. McKee, at Windsor, Ont., which was opened recently, is one of the many indications of the healthy growth of the Border Cities. Carrying on a general retail lumber business and planing mill, W. J. McKee found that yard and mill expansion was necessary to keep in step with the expansion of business in the Windsor district. The McKee site is, at 133 Salter Avenue, Windsor, and covers 3 1/3 acres bordering on the main line of the Canadian Pacific Railway.

The mill and lumber sheds are advantageously located, both being in the same building. The factory proper is a commodious structure, the dimensions being 100 x 275 feet, one storey, and of solid brick construction. A feature of the layout is the 20-foot concrete driveway which runs from end to end of the mill, passing through the dressed storage department for lumber, mouldings, doors, etc. The west side of the edifice is occupied by the mill, boiler room, shaving bins and rough finish storage.

In the laying out of buildings and yards there are many problems to engage the minds of executives. One of the most important and to which is often given too little thought is the handling of the materials. W. J. McKee, however, has, apparently, given this part of the business considerable attention. On the east side of the mill there are thirteen doors and a railway spur running parallel with the building which greatly facilitates unloading.

The mill is exceptionally well lighted, having besides the usual side light, additional brightness by the presence of skylights. The machinery and equipment is new and modern and the entire building and contents are protected against fire by a Grinnell sprinkler system.

## Historic Planing Mill Changes Hands

The Independent Coal Co., of Ottawa, recently purchased the Buckingham Planing Mill Co., at Buckingham, Que. The charter of The Buckingham Planing Mill Co. dates from about the year 1866, the mill and offices of the company at that time and for many years subsequently being at Masson, Que.

The business seems to have been conducted so economically at Masson, that rumor credits the company with paying regular divi-

dends from an accumulated surplus for some time after regular operations were suspended. Some twelve years ago The Parker Planing Mill Co., of Buckingham, then in operation about eight or nine years, took over at an upset price the stock and effects of The Buckingham Planing Mills Co., and the companies were amalgamated, business from the time of the taking over of the Masson Company being conducted under the name and charter of The Buckingham Planing Mill Company, Limited. Four or five years ago the Buckingham Planing Mill Company added a sawmill to the plant, which is included in the sale to The Independent Coal Co.

## Completing Detailed Cruise for Arnprior Firm

The James W. Sewall timber cruising organization of Old Town, Maine and Washington, D. C., is completing the final office work on a detailed cruise and estimates of some 1,000,000 acres of land belonging to McLachlin Brothers, Ltd., of Arnprior, Ontario.

The work has taken upwards of 2 years, and has been very thorough and complete. All boundary lines of the various properties have been re-surveyed, and new interior lines for purposes of mapping control run parallel with each other at 2-mile intervals. Cruisers have gridironed the property between these control lines, travelling at close intervals, mapping the country and estimating the timber.

The results of the survey and exploration have been systematically set forth on standardized sheets and maps, filed with the owners at Arnprior. The system is so thorough that any location on which information is wanted, may be turned to in two minutes, and the maps thereof, as well as the estimates of timber and local report, be on the executives desk immediately.

## What Pulpwood Supply Really Means

"One of the market features that is keeping the publisher on his toes today is the ascending price of newsprint," reads a statement recently issued by the Natural Resources Department, Ottawa. "Pulpwood is by far the most important of the raw material entering into the manufacture of newsprint. To secure pulpwood the mills have to go farther away every year. While the annual cut of pulpwood has grown to enormous dimensions, amounting in 1920 to over four million cords, forest fires are devastating more of our forest areas to a far greater extent.

This year the forest fire hazard will undoubtedly be severe, and every citizen should recognize his personal responsibility, and do all he can to save the forests for labor-employing industries."

## Will Clear Burned Abitibi Timber Lots

It is learned that 15 acres of land on each of a number of burned timber lots are to be cleared this season in the Abitibi region by the Quebec Provincial Government. It is also understood that, in accordance with the policy inaugurated in some sections of the province, small houses for the use of settlers will also be erected.

With this announcement comes one to the effect that a distribution of grain seeds will be made for the benefit of poor settlers by the Department of Colonization in the course of next summer. These seeds will be given to settlers whose crops were damaged last year.

## Tree Re-planting Operations are Costly

Some thought has been given by Canadian provinces to the subject of the re-planting of the forests. It is an expensive proposition. It costs \$20 an acre to plant a forest and at the end of sixty years, when merchantable timber has been grown from the seedlings, the cost per acre with compound interest added, has mounted into a large total. That is why it is so hard to arouse public interest in re-forestation work. An important question comes up as to whether the costs of such work by the provinces can rightly be charged to current revenue—revenue from stumpage fees, etc., or if it should be charged as a capital investment.

## Single Seated Planes for Forest Control

In the patrol of the forests for purposes of fire prevention by the Canadian Air Force during the present season, the method to be employed involves patrol by single-seaters, instead of using large machines. Furnished with a wireless apparatus, once a fire is discovered, instant communication may be had with the base, from which a large machine carrying men and fire fighting gear can proceed to the scene. The new method will be much more economical.

## A Good Sign

The increasing number of firms engaged in the lumber trade who come to us for their camp supplies year after year is a sure indication of our ability to serve.

### H. P. ECKARDT & CO.

WHOLESALE GROCER

Church St. and Esplanade, Toronto

## Here's a 30% Increase in Your Pulp Output Without Increase of Power or Floor Space----

### Our New Improved Pulp Grinders

open up new avenues of profit through new efficiency.

"Tidmarsh" Patent Pulp Scrapers between the pockets prevent the pulp from entering the following pocket and being re-ground into flour pulp.

"Tidmarsh" Automatic Door Openers open the doors instantly by reversing the pressure on the feet when the wood is ground away. Refilling is quicker and easier which means steadier production.

Pockets are tapered lengthwise and crosswise. Wood does not wedge in pockets. Pockets are wider and higher than usual, holding more wood, and not requiring re-filling so often. Large discharge opening. Large hand hole plates. Packing gland adjustable from outside of machine while in operation.

and Birk's Building, Montreal

### Reports Big Demand from American Market

The pulpwood situation has undergone a change for the better in the district of Quebec. Toward the end of April transportation from the base of supplies to the American mills began to improve and up to the second week of May the shippers had little difficulty in comparison with previous months to obtain all the railway rolling stock necessary for the delivery service to carry out the completion of their contracts with the American mill interests.

As a consequence part of the pulpwood for sale in the Quebec market has been disposed of and being shipped to the United States buyers. These transportation conditions also apply to the shipment of some lumber from the Quebec mills to the United States, and it is expected that by the middle of May, all orders which had been booked by the Quebec lumber mill interests, will have been forwarded to their American purchasers.

In the meantime the Quebec mill interests are daily receiving orders from the American market and the demand is growing in keeping with the boom in the United States, which is sending the prices over the southern boundary sky high. Just how long this boom and inflation in the United States will last, is a question watched with a great deal of interest by the Canadian lumber trade. Many are of the opinion that it cannot last more than another six months, when there will come an unpleasant downward trend, followed by a regular slump. This, economic experts say, cannot be avoided on account of the startling rise in the price of lumber and building material generally, not to speak of the demands being made by mechanical and common labor. The latter aggressive demand is causing the investors much concern and now capital is beginning to cry out in alarm against the arrogance of labor and the day is not far distant when there will be a revolt of capital against labor. In the meantime, labor is going ahead with its increased demand and if something is not soon done to curb the aggression, capital will become paralyzed and unable to function.

Capitalistic interests, discerning the situation, while anxious to put an end to these conditions of strangulation, seem to have no remedy to offer. They realize that by constantly giving in to the exactions of labor, they are building up a spirit of revolution, and still cannot get together to perfect an organization by co-operation to fight the impending evil until it is too late.

### Spruce Falls Co. Took Out Much Wood

The Spruce Falls Co., of Kapuskasing, Ont., during the past season took out 75,000 cords of wood, about 35,000 cords of which are now on the river bank at the company's plant. The balance will be brought down in the drives as the streams open up. All the digesters of the plant have been running practically to capacity since the early part of December. The output is over 100 tons of unbleached sulphite pulp daily.

The Spruce Falls Co. have built during the past year at Kapuskasing 59 houses and contemplate building as many more this year. The new Hydro plant which the Spruce Falls Co. are constructing on the river bank adjacent to the sulphite plant, has been completed and will be put in operation in a few days.

### Operating Position of Riordon Company

General opinion is that the prospects of putting the Riordon Company, Montreal, back into strong operating position are very good, but it is said there will be little in the reorganization for the former preferred and common shareholders. Most of these have given up hope of getting any substantial benefit out of the reorganization. The rights to subscribe for new stock in the new company that are likely to be given, will have a value that is yet to be determined.

It is stated that the 6 per cent. bondholders will be well protected but that the holders of the 6 per cent. bonds of the Riordon Company will get something in the nature of a second preferred stock. Ranking ahead of this, it is said, will be about \$10,000,000 of first preferred stock which, it is planned, will be offered to present

stockholders for subscription, although the public as a general public also may be invited to come in.

The company has sold a number of its timber limits, chiefly outlying hardwood properties that were not of particular value to a pulp and paper company and this has added considerably to the liquid resources of the company, all facilitating the progress of reorganization.

### Whalen Company's Plants are Busy

The Whalen Pulp & Paper Co. of Vancouver, who operate mills at Howe Sound, Swanson Bay and Port Alice, B. C., and of which Hon. T. W. McGarry, of Toronto, is president, is today finding a ready market for its output of easy bleaching and bleached sulphite pulp. Business generally on the Pacific Coast province is in good condition and the company is sharing in the general betterment.

At the present time the Whalen Company is shipping about 350,000 shingles a day to the United States market. Its sawmill is operating and lumber is being shipped to Japan and China, while a market is available for all the sulphite pulp.

The company retired \$250,000 of its serial bonds due May 1st, and at the same time fully provided for all interest on its bond and debentures for the half year ending upon that date. Since 1920 the company has returned to holders of serial bonds \$500,000 in all. During the adjustment period of 1921 the Whalen Pulp experienced all the difficulties incident to that buying time, but throughout maintained its interest payments in full.

### Another New Paper Mill for Quebec

A new paper company has been formed known as the Western Quebec Paper Mills, Limited. The plant will be located in St. Andrews, Que., on the North river. The company will manufacture tissue papers and other special lines and will gradually increase its output as business warrants.

The Western Quebec Paper Mills will do their financing through a first mortgage bond issue, bearing 6½ per cent. interest and maturing in 25 years. A unique feature of this issue will be the fact that the principal will be insured with a prominent Canadian insurance company which will guarantee the payment thereof to the bondholders. While the company has authorized an issue of \$1,000,000, only \$225,000 will be issued presently—the balance of \$775,000 can only be issued to the extent of 66 2/3 per cent. of any capital expenditures in the future.

### New Company Contracts for Pulpwood

The Buskegan River Pulp & Lumber Co., have been organized with headquarters at Cochrane, Ont. J. A. Legris, of Haileybury, H. Fontaine and J. B. Moncion, of Cochrane, are the directors. The company have begun the construction of a rossing plant and have signed up contracts for 15,000 cords of sap peeled spruce and 1,000 cords of poplar for delivery this summer and are figuring on getting 3,000 more cords of spruce rossed before December next.

### Western Pulp Plant May Resume

It is learned that the Western Canada Pulp & Paper Co., whose mills are at Port Mellon, B. C., and have a capacity of about fifty tons of kraft pulp daily, are being reorganized and may resume activities in the near future. Two companies have been formed to take over the assets of the concern; the Howe Sound Pulp & Paper Co., will have control of the mill, which is about twelve miles from Squamish and may eventually be fed by power from the Bridge River Power Company's new plant. The timber limits on the north end of Vancouver Island have been taken over by the Port McNeill Timber Co., Limited. It is believed that if negotiations are concluded in Toronto and New York soon, and the market price for kraft pulp and paper picks up, the plant of the Western Canada Company will get under way in the not far distant future.

## EDGINGS

M. A. Painchaud, Lac Sagway, Que., is contemplating building a sawmill at a cost of about \$5,000.

Portneuf Pulpwood & Lumber Mfrs., Quebec, P.Q., is a recent registration.

The Canadian Western Lumber Co., near Fraser Mills, B. C., are making plans for an addition to their veneer plant.

Fire destroyed the sawmill of L. Nault, at Daveluyville, Que., causing a \$10,000 loss.

The National Wood & Pulp, Limited, Montreal, recently obtained incorporation.

The Eagle Lumber Co., Montreal, have started work on a new office and storage shed.

Alex. Flett, of Burketon, Ont., has started cutting this season and the output of his mill will be all pine.

The Rat Portage Lumber Co. has sold its Winnipeg box factory to Minneapolis interests.

Fire recently caused considerable damage to the premises of the Manning-Sutherland Lumber Co., Limited, at Camrose, Alta.

The plant of the Otis-Staples Lumber Co. at Wycliffe, B.C., has a unique record, having been closed down only nine weeks during the past ten years, except for repairs.

The plant of the J. D. Shier Lumber Co. at Bracebridge, Ont., has started operations and has a large supply of logs for a full season's cut.

The Summerland Lumber Co. have started the operation of a new mill at Myren, near Hope, B.C., where the company own extensive limits. The cutting capacity is about 20,000 feet a day.

S. C. Slater, formerly of the office staff of the Laidlaw-Belton Lumber Co., Sarnia, Ont., has joined the sales force and is now covering Western Ontario in the interests of the firm.

The Thomson-Kneeland Lumber Co., Limited, have removed from 344 William Street, Montreal, to larger premises at 806 Notre Dame St. West.

A. E. Maxwell, manager of the Gatineau Co., Limited, who suffered a stroke of paralysis while visiting Montreal, has been removed to Ottawa, his home city.

Dubois & Gosselin, Limitee, Montreal, is a new organization recently formed to manufacture and deal in all kinds of wood products. Capital \$20,000.

The Muskoka Wood Mfg. Co., Limited, Huntsville, Ont., are making preparation for the erection of a new boiler house. The building will be one storey, 40 x 40, and will cost about \$6,000.

Vachon & Parent, Limitee, Disraeli, Que., was recently incorporated to conduct a general lumber business manufacturing pulpwood, and lumber products. Capital \$40,000.

A large amount of standing timber and several barns belonging to the Indians were burned recently owing to the presence of prairie fires in Hobbema, Indian Reserve south of Wetaskiwin, Alta.

The Alberni Pacific Lumber Co., Port Alberni, B.C., are preparing to start work on a new bunkhouse to cost \$7,000. The building will be frame construction, one and a half storeys.

C. A. Govan, of Cox, Long & Co., Limited, Montreal, has just returned from England, while R. H. Lightburne, of the London office of the same company, who was on a visit to Canada, has returned to the Old Country.

La Cie D. Rauleau & Fils, Limitee, St. Tite, Que., have been granted a provincial charter to manufacture pulpwood, lumber and other similar products. Capital \$199,900. Two of the incorporators are M. Rouleau and D. Rouleau, both of St. Tite.

Neil Watson, of the firm of Watson & Taylor, Ridgetown, Ont., recently spent an extended holiday in North Carolina. Mr. Watson, who is widely known as the "Mayor of Mull," reports having a splendid time and thoroughly enjoying his trip.

Capt. J. P. Gillies, of Spragge, Ont., is now looking after the management and operation of the R. B. Herron & Co. sawmill at Tionaga, Ont. Mr. Herron has embarked in the wholesale lumber business in Toronto and is handling all kinds of forest products.

J. Ford Paper Co. Limited, Portneuf Station, Que., have started the erection and building of a pulp mill and dam. The mill dimensions will be 200 x 100 ft., and the two projects will cost about \$200,000.

Fire destroyed the mill of the Beaver Lumber Co. at Port Alberni, B.C., recently. It was unfortunate that the insurance does little to cover the loss and the fact that the owners intended to move the plant to another location in a few weeks.

A. A. Richards, of Edward Lloyd, Limited, England, is visiting Canada with the object of looking into the feasibility of establishing a pulp mill, the product of which is to be used in the company's paper mill in England, the largest newsprint plant in the world.

An elm log, 16 feet long and measuring 15 feet in circumference, was sawed recently at the mill of G. E. Bousefield, at Milton, Ont., and made over 1,000 feet of lumber. This was said by local lumbermen to beat the record for large logs in Halton County.

Rumors say that Howland & Waltz, large pulp and paper manufacturers of Minneapolis, Minn., have actually started work at Nelson, B.C., on the building of a huge pulp making plant, to cost \$2,000,000 employing 300 hands.

Alex. Dick, who for the past four years has been manager of the Alfred McDonald Lumber Co., Peterboro, Ont., recently concluded his services with that firm and is opening up in the lumber business on his own behalf in Peterboro.

Work will start shortly on the new \$60,000 sawmill to be built in the North Thompson Valley by the Spruce & Cedar Lumber Co., of Kamloops, B.C. The mill will be two storeys 40 x 80, and of frame and mill construction.

Reconstruction of the superstructure of the timber pilework wharf at Blind River, Ont., is contemplated by the Dominion Government Department of Public Works. The work would cost about \$21,000.

The Bay Sulphite Co., of Port Alfred, Que., recently increased its capital stock from \$3,500,000 to \$8,000,000, by the creation of 45,000 additional common shares of \$100 each. The number of directors of the company was recently increased to nine.

Arthur G. Bowler, Deputy Inspector of the National Hardwood Lumber Association, with headquarters at Montreal, recently resigned his position in order to join the staff of the Johnson Lumber Co., Inc., Manchester, N.H. Mr. Bowler entered upon his new duties on May 1st.

W. Hartley Dunham passed away recently in St. John, N.B., in his 79th year. For many years he was engaged in the lumber business but retired from that line in 1913. Mr. Dunham lived all his life in St. John and was held in high esteem especially in the north end of the city where he was best known.

Weismiller Bros., Bala, Ont., have secured the lumber and exterior trim contract for the new club house of the Deer and Pigeon Lake Club at Deer Lake, Ont. The new summer outing club is being financed mostly by Pittsburg people and will cost about \$30,000. Roushorne Bros., Bala, have secured the contract for sash, doors and interior trim in the building.

British Columbia's timber industry is receiving a decided impetus in West Africa where millions of feet of timber from that province are being utilized in the bridge work and railway construction now going on along the Gold Coast where Stewart and McDonald, well-known Canadian contractors and railway builders, are constructing one of the largest harbors in the world at Taharodi.

The Civic Beautification Committee of the Chamber of Commerce, Hamilton, has inaugurated a memorial driveway with an avenue of elms five miles long. Each tree will represent a fallen Hamilton soldier. The first instalment has just been planted, the initial tree being placed in position by Sir John Gibson and the second by Adam Brown. Sir John is now 82 years of age and Mr. Brown is in his 98th year.

Timber cruising in the Algoma district will start later this year than usual and will not be under way till toward the end of May. A. H. Huckson, Crown Timber Agent, of Sault Ste. Marie, is in charge of the men in the work of cruising. Extensive work will be done on the Mississauga forest reserve and townships to the north as well as along the line of the Algoma Central Railway. During the past few days fire rangers have been despatched to many points in the Algoma and Sault division to take up their work at the different stations.

The International Land & Lumber Co., whose limits and mills are at St. Felicien, Que., state that they will be running to full capacity during the coming season, turning out a contract for ties with much jack pine and spruce lumber as possible. So far as they can the Canadian National Railways and at the same time getting out as judge, the company say that prices will be from 10 to 12 per cent higher than last year as there is quite a good demand for lumber in that district, principally for the two large dams which are being constructed at present. The season for operation is rather later this year than usual owing to the recent severe winter.

## Newsy Briefs from the Busy East

Flood conditions in New Brunswick will result in the loss of thousands of dollars to lumbermen. The unprecedented high water as a result of heavy rains and the usual spring freshet frustrated every effort on the part of operators to protect their winter cut and from all over the province come reports of booms giving way and millions of feet of logs being carried off with the onrushing waters. Every available means, at the time of writing, is being resorted to in an effort to salvage the logs, and large crews of men with tugs, motor boats and equipment are being rushed to advantageous places and points along the rivers to collect floating logs. Despite these efforts it is estimated that many thousands of logs will be lost.

The freshet has also created havoc in mill yards about St. John, large piles of manufactured product being undermined and toppled over and booms had to be strung to keep it from drifting away. Murray & Gregory's mill was flooded as were other mills along the river front.

While the freshet is partly responsible for the delay in opening the mills there was another factor, which was more instrumental in holding back the resumption of operations. Last year the employees were cut down sixty cents a day and this year the men were bent on recovering this amount. They were offered ten per cent increase, but held out for twenty cents. While a settlement was pending the freshet stepped in and up to the time of writing is reigning supreme. The outcome of the question will not be known until conditions are bettered and the owners and employees have a chance of getting together and effecting a settlement.

Reports received prior to the flood were favorable with regards to the lumber drives. The Greer brook drive for Fraser Companies

Ltd., was brought out safely recently. Conditions on the Nashwaak river were reported favorable a few days ago. The Nashwaak Pulp & Paper Company had crews of men out making preparations for their driving. They sealed the river at Penniac and at the mouth shear booms were placed for the run of logs. A start was made a few days ago on Arnold Brook.

A report from the Nashwaak said that the Fraser Companies, Limited, drive was well under way. It is estimated that it will aggregate 11,700,000 feet. A drive was also reported moving on the Yoho river and is said to be that of the Fraser Company. A report from the Keswick said that the E. Burt Lumber Company drive of 6,000,000 was moving along satisfactorily.

The total cut of logs in New Brunswick during the past winter is estimated at 400,000,000 feet. This includes a cut of 210,000,000 feet from the Crown lands. The severe winter and heavy snows caused the loggers to slow up in the southern part of the province, and in some cases the men had to discontinue operations and return to their homes. This condition increased the expense of the logging.

A law suit which has been attracting considerable attention throughout the province was that involving the ownership of standing timber on certain lands in the parish of Hopewell now in possession of Mrs. Mary A. Hawkes, these lands being a portion of a farm purchased by Mrs. Hawkes from Frank B. Woodworth. It appears that the firm of W. H. Duffy and Sons, Limited, of Hillsboro, held a lease of the land, having bought the timber on the same from Mr. Woodworth, and proceeded to cut on that area during the winter although forbidden to do so by the plaintiffs. Their contention being that there was no encumbrance against the property when they bought it, as shown by the records. The suit is attracting considerable attention among lumbermen and others.

Recently when a proclamation was issued in the Royal Gazette announcing that all forest land in New Brunswick had been proclaimed "a protected area" and that commencing on May 1 and extending over a period to November 1 all persons entering the forests for the purpose of travelling, camping, fishing or picnicking must register, it was suggested that because of the extended winter conditions and the late spring the regulations might not be enforced until a later date. However, information recently received by the Forest Service Branch of the Department of Lands and Mines from representatives in various parts of the province indicated that, in many sections, the woods were already becoming dry and that the forest fire hazard is already imminent. These reports caused officials to rush along preparations for the introduction of the new regulations and from now on all persons who are found in the woods without the necessary certificate of registration will be subject to penalties ranging from \$10 to \$100. The only persons, who are exempt from the provisions of the new regulations, are licensees and owners of lands entered upon, their employees, fire wardens, fire fighters, land surveyors, holders of licenses for hunting, fishing or mining, registered guides and persons accompanied by registered guides. The name of the applicant, the route, destination, purpose and duration of trip, together with dates, will be required for registration purposes before certificates can be issued.

Literature is now in circulation warning citizens that "forest fires burn the future." In the circulars it is pointed out that every fire, that burns in the forests, is detrimental to the progress of civilization and that in destroying the forests it is not only a question of damaging the present, but literally burning up the future. An effort is being made to impress these important facts upon the minds of all, but in particular of the rising generation.

Late reports from over the province of New Brunswick say that five million feet of logs were carried down the main Restigouche River on May 3 and passed under the ice at Campbellton.

## Minister Urges Farmers to Plant Trees

Hon. H. Mercier, Minister of Lands and Forests for Quebec, recently stated that there were vast areas of cleared lands in the province which unfit for farming, are going to waste in the province. In most cases the farmers had cleared off the trees and, after trying to cultivate the land unsuccessfully, had abandoned it with the result that every year thousands of acres are sold for unpaid taxes.

Mr. Mercier added that this waste land totals more than 3,000,000 acres, which if planted in spruce, pine and other woods, would produce forests of timber and lumber for the farmers. It would, of course, take about 30 to 40 years to get the first crop of wood but thereafter these forests would yield 750,000 cords of wood a year. Saplings could be secured at the Government nursery at Berthier at a low cost. They are advised to plant a few acres of the waste land on Arbor Day and thus enhance the value of their farms while they would also give invaluable assistance in a work of national conservation.

Tugs for Logging, Raft Towing, large power, all sizes. Cargo Boats of all sizes and description. Marine Engines and Boilers, all types and sizes.

We specialize in all types of Boats or machinery in connection with the lumber industry.

We also furnish steel frames and marine equipment of every description.

Write for our stock list or send us your enquiries.

List your boats or used marine equipment with us. We can find you a buyer.

In short, it's Service—Real Service—that builds Good Will.

## EDGINGS

The Jasper Hardware & Lumber Co., Jasper, Alta., recently commenced business.

The Montreal Retail Lumbermen's Association have removed to larger quarters at 195 St. Catherine St. East.

Joseph Meloney, president of the Canadian Cedar and Lumber Co., Limited, Winnipeg, passed away recently.

The Dominion Tie Co., Limited, Winnipeg, has been granted a federal charter.

A lumber yard in Lynn Creek, B.C., belonging to A. D. Kennedy, was recently damaged by fire to the extent of \$40,000.

F. Villeneuve, retail lumber dealer, Walkerville, Ont., returned home last month after having spent several weeks in Florida.

Damage to the extent of \$30,000 was done recently to the Manning-Sutherland Lumber Co. at Camrose, Alta.

The shingle mill of the Garrett Lumber Sales Co. at New Westminster, B.C., was recently destroyed by fire, causing a loss of about \$50,000.

Archie Warwick, son of T. C. Warwick, lumber dealer, of Blenheim, Ont., has bought the retail yard of Fred. Kennedy at Ridgetown, Ont., and is now located in that town.

J. J. Crowe & Co. Ltd., Bowsman River, Man., retail lumber dealers, recently sold their local yard to Theo A. Burrows Lumber Co., Ltd.

York Mills Builders' Supplies Co., Limited, York Mills, Ont., was recently incorporated with a \$40,000 capital to deal in all kinds of builders' requirements.

The Canadian pulp and paper mills will have a representative collection of their products on show in the Canadian exhibition train which will tour France.

The Rat Portage Lumber Co., Limited, Virden, Man., has been succeeded by the Taylor Lumber Co., Limited, Merchants Bank Bldg., Winnipeg.

C. J. Gardiner, owner of the C. J. Gardiner Logging Co. at Nitinat, B.C., died recently following injuries received during logging operations. Mr. Gardiner was caught between two logs which broke three of his ribs.

The Markin Lumber & Pole Company who control five mills on the Great Northern Railway, North of Nelson, B.C., employ about 500 men in the manufacture of poles. At present three of these mills are leased to Doukhobors, who will cut about 10,000,000 feet of lumber and between 50,000 and 60,000 poles.

Keenan Bros., of Owen Sound, Ont., have started up their new sawmill for the season and have arranged for the largest cut of hardwood they have had in some years. The cut of pine of the firm will be lighter than usual. Keenan Bros. look forward to an exceptionally busy season in the lumber line.

Plans are being prepared for a larger and more modern mill to be erected on the site of the old one at South Vancouver, which was destroyed by fire some time ago. The mill belonged to the Dominion Creosoting & Lumber Co. and rebuilding will be shortly carried out on the North Arm site.

The extensions to the plant of the Dryden Paper Co., at Dryden, Ont., have been completed, including power development at Wainwright Falls. The capacity of the plant will be 75 tons of sulphate pulp daily. Two-thirds of the production will go into wrapping paper and sulphate building paper.

The Green Lumber Co., of St. Thomas, Ont., has been awarded the contract for erecting a new clubhouse on the recently-acquired property of the St. Thomas Golf and Country Club. The location is about five miles south of St. Thomas and the building now in course of construction will cost about \$20,000.

The Hope Lumber Co., Limited, are erecting a large and thoroughly modern sawmill at Little Current, Ont., which will have a capacity of 160,000 feet of lumber in ten hours. It is expected that the new plant will start sawing about June 1st. Roger Barber is the superintendent, and a very busy season is anticipated.

It was stated some time ago that the Provincial Paper Mills, Limited, of Toronto, intended erecting a soda pulp plant in Port Arthur. The object of the plant will be to convert poplar into wood pulp. While the project has been under consideration for some time, no definite conclusion has been reached.

At Woodstock, N.B., the rising floods did great damage recently, Meduxnekeag's Creek going on the rampage. The loss was very

heavy and the power company's dam was swept away. The Smith Lumber Co. sustained a loss of about \$25,000 but were successful in saving their horses from the barn.

It is understood that there will be an enlargement in the near future to the plant of the Westminster Paper Mills, New Westminster, B.C., in order to cope with increasing business. About half a million dollars has already been invested by the company in the project.

A number of farmers in Clarke township, Durham County, Ont., are taking advantage of the Provincial Forestry Nursery's distribution of pine transplants and are replanting their waste land. One farmer set out 1,500 jack pines on a 60-acre farm and it is said that another farmer will plant 2,000.

President W. H. Schuette, of the National American Wholesale Lumber Association, New York City, has completed his appointment of standing committees for the current year. H. J. Terry, of Toronto, has been made a member of the Board of Managers of the Bureau of Information.

The Mageau Lumber Co. have begun operations in their new mill at Field, Ont., which replaces the one destroyed by fire some time ago. The plant will be operated night and day and it is expected that the output will be from 100,000 to 120,000 feet daily. The company have an unusually large number of logs which will be cut up into lumber.

A despatch from Nelson, N.B., states that four sawmills were running there during the latter part of April, all engaged in cutting lumber for the American market. One of the mills was sawing logs and the others were resawing cut lumber. It was something new on the Miramichi River to have plants running and the ice not out of the stream.

P. T. Dodge, of New York, president of the International Paper Co., was in New Brunswick recently on a visit and conferred with Premier Veniot in an attempt to convert the Government to the plan of allowing the International Paper Co. a renewal of the waterpower right at Grand Falls. The New Brunswick Government has already contracted for the sale of \$1,000,000 in bonds and will start preliminary work on the Hydro-Electric station at Grand Falls.

The last week in April was proclaimed by the Federal Government as "Save-the-Forest Week." The federal powers are recognizing more and more the importance of the forests in the foreign and domestic trade of Canada. The propaganda for conservation is securing to an appreciable extent larger attention and greater interest from business men who are rapidly realizing the necessity of protecting the remaining timber and pulpwood of the Dominion.

A recent despatch from Sault Ste. Marie said that unless rain came, the pulpwood dealers and lumbermen would have trouble floating their logs down the streams in various sections of Algoma. In the face of the fact that the district had more snow by a great deal than usual during the winter and in spite of late thaws, the streams had not risen to the height usually reached in the spring. The dryness of the ground last fall and the fact that there was little or no frost during the winter, accounts for this.

The lumber industry figured in the representations made by the deputation of prominent men from the Maritime Provinces who waited on Sir Henry Thornton in Montreal, in reference to the divisional border line of the Canadian National Railways. The main question involved is that of freights, and Premier Veniot, of New Brunswick, urged the lowering of rates. He added:—"The shortage of railway freight cars played havoc with our lumber exports. When the prices of lumber were well up, the maritime merchants were left with their product because there was no means of sending it away."

W. F. V. Atkinson, forest engineer, of Toronto, left recently for Eastern Quebec where he has taken an important position in the pulpwood department, and will carry out a number of improvements in connection with the operations of the St. Regis Paper Co. of Canada, Limited, on the Godbout river, near Matane, Que. The St. Regis Company are contracting for and purchasing many thousand cords of pulpwood which will be shipped to their various plants on the other side of the line. Mr. Atkinson will have charge of the operations and also the erection of a dock at the mouth of the Godbout river, the construction of booms and other improvements for facilitating shipments.

P. G. Mahoney Lumber Co., of Calhoun, Dorchester County, N.B., was recently granted a charter to take over the business of P. G. Mahoney, and manufacture and deal in forest products. The officers of the new organization are,—President, F. B. Mahoney; vice-president, H. M. Wood; treasurer, G. P. Mahoney; secretary, Miss G. Mahoney. The company states that it does not contemplate any marked extension in its plant at the present time though it expects to operate on a somewhat larger scale than for the past few years. The company is handling spruce almost entirely, with a small percentage of pine and hardwood.

### For Sale Cheap

Circular Sawmill, Building and Machinery; Steam Feed, suitable for Ties and Lumber.

also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

### TENDERS FOR PULPWOOD AND TIMBER LIMIT

Tenders will be received by the undersigned up to and including the 22nd day of June, 1923, for the right to cut pulpwood and timber on a certain area situated in the watershed of the Trout and Chapeau rivers in the district of Sudbury, comprising an area of 1,049 square miles.

Tenderers shall state the amount per cord on pulpwood that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for Spruce and 40 cents per cord for other pulpwoods, or such other rates as may from time to time be fixed by the lieutenant-governor-in-council, for the right to operate a pulp Kraft mill and a paper mill.

Tenderers shall also be required to say what they are prepared to pay, per thousand feet board measure, for the following classes of timber, over and above the upset prices in addition to crown dues:

Red and white pine, upset price, \$6.00 per M. ft. B.M.

Spruce (too large for pulpwood), \$5.00 per M. ft. B.M.

Jackpine (banksian), \$2.50 per M. ft. B.M. The crown dues on pine including Jackpine being \$2.50 and on Spruce \$2.00 per M. ft. B.M. or such other rates as may from time to time be fixed by the lieutenant-governor-in-council.

The successful tenderer shall be required to erect a mill or mills within the limit or at some point in Ontario approved by the minister, and to manufacture the wood into Kraft pulp, and also such portion thereof into Kraft paper when required so to do.

Parties making tender will be required to deposit with their tender a marked check payable to the honorable the treasurer of the Province of Ontario, for fifty thousand dollars (\$50,000.00) which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said (\$50,000.00) shall remain on deposit until the Kraft pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of \$50,000.00 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelopes and marked plainly on outside "Tender for Trout-Chapeau Pulp and Timber Limit."

BENIAH BOWMAN,

Minister of Lands and Forests.

Toronto, April 16th, 1923.

N.B.—No unauthorized publication of this notice will be paid for. 9-12

### D. FLORENCE & SONS

Bethune St., Peterborough, Ont.

### Sale of Timber

Tenders will be received by the undersigned up to and including Monday the 11th day of June, 1923, for the right to cut the timber in the township of Irish in the district of Algoma.

Further information may be obtained upon application to the undersigned or to Mr. A. H. Huxson, Crown Timber Agent, Sault Ste Marie, Ontario.

BENIAH BOWMAN,

Minister of Lands and Forests.

Toronto, May 1st, 1923.

N.B.—No unauthorized publication of this notice will be paid for.

### Good Profits Earned by Price Bros

The annual report of Price Bros. & Co., Limited, of Quebec, for the fiscal year from March 1st 1922 to February 28th 1923, has been issued. The report shows that the profits for the year were \$2,338,933.64 and to this sum is added \$341,346.81, the balance brought forward from the previous period, thus making a total of \$2,680,280.45.

From this amount was deducted a sum of \$1,973,736.23, leaving a net balance to be carried forward of \$708,544.22. The deductions made from the profits of 1922 and the balance brought forward from the previous year are as follows:—Bond interest and sinking fund requirements, \$419,976.47; allowance for depreciation of the company's properties and depletion of timber limits, \$700,095.76; distribution among shareholders of dividends totalling two per cent., \$853.664.

### Fighting the Insect and Fungus Growth

An interesting statement was recently made in the House of Commons at Ottawa, by Hon. W. R. Motherwell, Minister of Agriculture, in reference to what the authorities are doing in order to save Canada's forests. Mr. Motherwell said that the Government had considerable information on the subject which had been collected by the Division of Forests Insects of the Entomological Branch, and by the Division of Botany of the Experimental Farm of the Department of Agriculture, in co-operation with the Dominion Forestry

Branch of the Department of the Interior, and the various provincial forest administrations.

The Government was fully aware that considerably more work should be done, and was ever ready to give careful consideration to representations made by the industries concerned in order to assist in the removal of the serious causes of losses to the forest resources. Special investigation had been made in regard to the dying balsam and spruce in Eastern Canada and a scheme of co-operation is contemplated between the owners of some timber limits and the Division of Botany whereby the services of trained forest pathologists will be available for the study of various diseases affecting balsam and spruce in the eastern districts.

### Will Zealously Guard Forests Against Fires

The Department of Lands and Forests in Quebec is very active at the present time and Hon. H. Mercier, is losing no opportunity to emphasize the importance of the forest as the principal asset of the province. He states that the number of forest fires in 1922 exceeded those of 1921 by almost 50 per cent, because last year there were two fire seasons one in the spring and the other in the fall. The area of forest land swept by fire in 1922 amounted to 740,000 acres as compared with 800,000 acres in 1921. Although the year 1922 had two fire seasons the losses were not so great as those of the previous year.

### MacLean Reports Cover Canada

MacLean Building Reports will give you accurate, advance information on every building and engineering contract of consequence in the Dominion.

These reports are issued daily and reach subscribers in ample time to bid on the work or submit prices for the machinery, equipment, materials or supplies required.

Subscriptions may be placed for any one city, portion of a Province or more than one Province. Rates range from \$25 yearly for the smallest cities to \$500 yearly for the entire Dominion.

Hundreds of firms are deriving much financial benefit from the use of MacLean Building Reports. Tell us what territory you cover and put it up to us to show how we can help you get more business.

Try this service out. The result will please you. Write today for rates and free sample reports.

# The Carriage You Are Looking For

## Our No. 1 Size

**CARRIAGE**—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

**SET WORKS**—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

**FEED WORKS**—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

## BOILER AND FURNACE EFFICIENCY

Knox Bros. Ltd., who are specialists in British Columbia forest products, and handle the very best, in and from, the West, have decided that the best equipments for handling their products economically (is none too good) for their first unit of their new re-inforced Concrete Mill which they are erecting on the Bickerdike Pier, Montreal, Que.

With boiler and furnace efficiency in view, and lowest maintenance cost being a factor as well, they have awarded the contract for the Boiler Brick Setting and the supplying of three Gates Engineering Co. Ltd.'s. special Dutch Ovens with incline grates, and Flat Arch Suspension Harness of the Air Cooled type, for taking care of all their mill refuse. This type of furnace will burn economically, tan bark, hog fuel, and sawdust efficiently, with up to 60% moisture content and 150% to 200% Boiler Rating.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

# You'll be Surprised at How Little it Actually Costs to Supply Milk for Every Lumber Camp Need

There's no food like milk. It will enable the cook to serve a greater variety of wholesome dishes. Nothing will go so far toward keeping the men contented and in good health.

C.M.P. Powdered Milk Products make liquid milk that is just like fresh cow's milk in taste and consistency. To make into liquid milk simply add fresh water. Powdered milk bulks small and requires only a cool, dry place for storage. Can be used as required. The last tin will be as good as the first.

Samples sent on request.

***Not altogether what we say,  
but what users say***

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,  
in calm weather, 30,000 in a head wind.

**West, Peachey & Sons Simcoe, Ont.**

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

**ADAM HALL, LTD.** Peterborough, Ont.  
Pioneer Manufacturers of Camp Ranges and Heaters

This engraving of a Link-Belt Chain has become familiar to Canadian industry through its use of Canadian business publications exclusively.

**“I cannot speak too highly of the results we have obtained through consistent use of large space in business papers”**

Julius Holl, Advertising Manager.  
Canadian Link-Belt Company, Limited.

The Link-Belt Company is among the largest manufacturers of elevating, conveying and power transmission chains, coal and gravel washing machines, ash handling equipment, locomotive cranes and similar products. Their problem is to sell to many diversified industries and they use established business papers with extraordinary results.

What Link-Belt have done you can do also by placing your Sales Message in a publication that reaches your definite prospects in a business-like manner.

An advertisement in a business or technical newspaper reaches a specific trade or industry without circulation wastage among readers who have no particular interest in the goods you sell.

Some of the most successful advertising campaigns in Canada of recent years have used trade, business and technical periodicals, either exclusively or as the foundation for a more general appeal.

The advantages of being able to reach a known prospective buyer through a publication he uses in his business cannot be over-estimated.

Linn Logging Tractor on the operation of The Power Lumber Co. Ltd., of St. Pacome, Que., (at L'Esperance)

# THE LINN LOGGING TRACTOR

Mr. W. Gerard Power, President of The Power Lumber Co. Limited, has perhaps, the greatest experience in Tractor haulage of any operator in Canada—and as the result of his broad experience, he became satisfied that there was but one Logging Tractor, and that was the Linn Logging Tractor. As the result of this decision he installed a Linn Logging Tractor at his company's operation at L'Esperance Quebec, this winter, and the results that he obtained fully justified his decision.

The operation of the Power Lumber Company Limited, at L'Esperance was probably one of the most difficult in either Ontario or Quebec—the haul was ten miles in length—against the grain of the country—with six or seven steep up-grades varying from six to twelve per cent—the roads were snow roads, and in many cases, so rough was the weather, that it was almost impossible for the operator to see the road because of the drifting snow. Yet every stick of their wood was brought out.

This is the fourth of a series of photographs which is appearing in this journal illustrative of Linn efficiency—The fifth will appear in the June first issue.

## It Shows Real Savings the Year Round

Our constant study of the needs of the lumberman, coupled with years of tractor building experience, has made the Northern "Caterpillar"\* Logger a practical and economical machine for both small and large operations. It is compact in build, is extremely powerful and easy to operate. Its wide range of speeds enables it to haul over all grades and to travel at faster speeds on the level and on return trips. Many operators say it is as indispensable for summer and fall operations as for winter work. Used for swamping out and building roads, hauling supplies to camps, or making up and pulling trains, you will find the Northern "Caterpillar" Logger the surest means of reducing logging costs. Write today for catalog.

(Continued on page 124)

## THE MARK OF DISTINCTION IN CIRCULAR SAWS

The first Circular Saws made in this Country were placed on the market by R. HOE & CO. in 1828, and GENUINE HOE SAWS have held the leadership in QUALITY, FINISH and SATISFACTORY SERVICE during the 94 years intervening to the present day.

For all purposes, and under all climatic conditions, the GENUINE HOE CHISEL-TOOTH and SOLID TOOTH CIRCULAR

SAWS have proven their superiority in every part of the World, and backed by a guarantee of absolute satisfaction no operator could do better than to use GENUINE HOE SAWS exclusively.

**R. HOE & CO., NEW YORK**

**AMERICA'S OLDEST SAW MANUFACTURERS**

## "Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

# FIRE BRICK

## AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"**

**"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

up to us.**

## Montreal Locomotive Works

Limited

**Dominion Express Building, : Montreal, Canada**

## This great Machine—Yates No. 91—undoubtedly is the world's standard fast feed, high powered big production planer and matcher

The most significant testimony to its supremacy among matchers is shown by the fact that today there are in operation more Yates 91's than any other make of this type machine.

Yates No. 91 is chain driven. Hence the machine is quiet and smooth-running and power is delivered to the feed rolls evenly. Upkeep of a chain driven machine is exceedingly small as compared with those gear driven. Chains are lubricated automatically.

Feed works are exceptionally powerful. Heads used are of the Six knife round type and are fitted with our patented slip-proof gib which prevents knives slipping while the bolts are being tightened.

These are some of the features of Yates No. 91 Planer and Matcher. Upon request we will send you copy of our Planer and Matcher book, which outlines this machine fully.

# ATKINS

## STERLING QUALITY SAWS

### The World Over

In every progressive sawmill, woodworking plant and furniture factory, you will find that the saw users are acquainted with the high quality of Atkins Sterling Steel Saws. They are making money for their owners by turning out work at the lowest possible price.

*It's the super quality of Sterling Steel, our exclusive formula that makes Atkins Saws supreme.*

If your mill is not using them exclusively, why not make a complete installation and profit by the service that is built into them. Send for Atkins literature, and learn why

# PORTABLE SAWMILLS

The Upper Fraser River Lumber Co. freighted a portable outfit, like the above, seventy miles over rough country to cut material for their big mill at Dome Creek, B.C.

They cut on an average of over 12,000 ft. per day, they turned out 200,000 ft. for their own use, sold several thousand dollars worth of lumber, produced over 2,000 ties and 100,000 ft. of lumber for stock. All this lumber came off their mill sight and was cut on the

# "HAMILTON" LOG CARRIAGES

Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40" from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33", 40", and 54", and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14", 16" or 18" diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

**OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST**

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests that has been in the Sawmill Machinery game for over sixty-five years.

### *Important Announcement*

A Shingle Nail is now being manufactured in Canada which should last the life of British Columbia Red Cedar Shingles.

This is a heavy gauge nail, has sharp point, wide head with thickened shank under, and is protected with a heavy coating of pure galvanized spelter applied by hot-dipped process.

Red Cedar Shingles applied with such nails assure a roof of lasting satisfaction.

Every lumberman could stock these nails to advantage. We will gladly send samples.

**British Columbia Lumber Commissioner**

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

## What Does Your Customer Say?

You will agree Mr. Lumber Merchant, that the life-blood of your business are the folks who "come again".

Their satisfaction is the measure of your success.

"Cost" may talk a little, but the Acid Test is "What does your customer say?"

You will find all that is essential in correct manufacturing, in worth-while grading, embodied in "Big Chief" Forest Products.

The simple result we seek is to supply you with a standard of West Coast Products which we know cannot be exceeded.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

## How Lumbermen Regard New Sales Tax

*New Legislation Regarding Operation of Federal Sales Tax Draws Many Comments from the Trade. Those in the Wood Industry Have Reputations for Being Broadminded and in This Instance Appreciate that Each Must Do His Share in Bearing Burden of Taxation. However, While Some Declare New Tax to be Excessive Most Manufacturers, Wholesalers and Retailers Will Be Content if Solution is Arrived at which Embodies no Loopholes and is Fair to All.*

The new sales tax of six per cent has aroused acute interest in the lumber trade. No sales tax is ever popular except when it bears most heavily on the other fellow. It is a levy which all quite willingly sidestep but since it cannot be dodged effectively, there are many ideas regarding its application and collection.

The "Canada Lumberman" has received numerous communications with respect to the new measure which will go into effect on August 1st next, and at the time of writing many points regarding its feasibility remain to be settled. Excerpts from communications received from several firms are taken at random and printed in this issue to show that no man, no matter in what branch of the lumber business he may be engaged, welcomes the new measure, or endorsed the action of the Ottawa administration in its fiscal ideas.

A leading Toronto wholesaler remarks:—"There are very few lines of business in Canada today, if any, in which the investment and risk is so great and the margin of profit so small as the lumber business. The three per cent sales tax, in our opinion, has been a very great handicap to the business, and if this tax is raised to six per cent it will do incalculable harm. We do not think lumbermen can stand this enormous tax which we venture to say is more than the average profit realized."

A lumber manufacturer in Western Ontario says,—"We think there should be concerted action upon the part of lumbermen to have this tax reduced. It is altogether too high. The three per cent tax was, certainly, high enough and lumbermen have enough difficulties to contend with today without having the levy doubled."

### Increase Will Injure Trade

An Ottawa wholesaler declares:—"It strikes us that taxation should be imposed at the source, viz., from manufacturers, in order to be collectible, and as the lumber business from a wholesale viewpoint is conducted on a very small margin or percentage of profit, if we are obliged to absorb this six per cent tax, either directly or indirectly, it will hamper our efforts at successful dealing. It must be remembered that if six per cent is tacked on to the manufacturer, such charge represents a like increase in the production costs, and in order for a manufacturer to realize a profit, he must necessarily increase his price to the next man who sells or distributes forest products.

One gleam of satisfaction comes from the exporters, and an eastern firm writes,—"Our business here is entirely export and we are not affected in the same way by the new tax as we would be if we were doing a local trade."

A Montreal wholesale and manufacturing concern say,—"We believe the increase in the sales tax on lumber as proposed by the Fielding Budget, is a great mistake. Lumber prices today have gone about the limit, and it is the

consensus of opinion that values are now at their peak. The six per cent sales tax will increase the cost of our lumber on an average about \$2.05 per M feet, and we do not believe the trade will stand it."

Another Toronto wholesaler remarks,—"We believe that the method by which the sales tax should be collected, should be on the total monthly sales of the manufacturer and not be shown on any invoice. If it is undesirable to show a sales tax on the invoice to a retailer, why should the sales tax be put on the manufacturer's invoice to the wholesaler? The wholesale profit on lumber is not such that it would readily absorb the six per cent sales tax, and this has to be added to overhead expense, and we consider this undesirable."

### Blames Lumbermen for the Outcome

A Quebec wholesaler asserts,—"The present tax is too complicated and unwieldy and is likely to retard building. It will also lead to a decreased consumption of lumber by general industries."

A leading eastern manufacturer says:—"With regard to increasing the sales tax on lumber to six percent, I do not care to express a very definite opinion at the present time until the matter comes before our Association. I deem silence the better course at the present time."

A New Brunswick lumberman says,—"We are not at all surprised at this increase as we have been rather expecting something of this kind. In fact I think that a good many of the lumber dealers are themselves to blame for the action that the Government has taken in this matter. You will remember that under the present Act the lumbermen are favored. The dealers, who buy from the manufacturers, started an agitation to have the manufacturers absorb part of this tax, calling attention to the preferential treatment the manufacturers apparently enjoyed, forgetting that the dealers themselves have the benefits under that arrangement. Now that the matter has been called to the special attention of the Government, they have brought us under the general clause, charging us the same rate as on all other manufactured articles. In my opinion, there is nothing for us to do except to charge the tax to the dealer when the purchases are made and he will have to pass it on to his customer in the same way. I do not know whether it is possible to have the Finance Minister reconsider this matter but I am very doubtful if we would have any success in that direction."

### Should Confine Area of Collection

A Northern Ontario lumber manufacturer takes a rather jocular view of the situation and says "Something desperate should be done to the fellow who invented taxes and interest." He adds,—"On sales already made and where the goods will not be delivered until after the new tax comes into effect, we

(Continued on page 42)

# Montreal Wholesalers Discuss the New Tax

*Many Dealers and Manufacturers in East Venture Opinion that Lumber Should be Considered Manufactured Product and Tax Collected at Origin with no Further Levy*

At the usual luncheon of the Montreal Wholesale Lumber Dealers' Association on Wednesday, May 16, an informal meeting of the members was held which was also attended by Mr. Dan McLachlin. Mr. Arthur Campbell outlined what had been done by the Montreal Lumber Association and supported the idea of a modification in the clause dealing with the re-manufacture of lumber. He expressed the opinion that it would considerably simplify the matter if the tax were paid entirely by the manufacture on the sawn lumber. He also stated that it was held by some lumbermen that the tax of 6% was too high.

## Public Will Ultimately Pay

Mr. Dan McLachlin said that, from his point of view, it did not make any difference whether the tax was borne by the mill or by the wholesaler—the public would ultimately have to pay it. If the lumber was regarded as manufactured material, then the mill would have to pay, but if it was regarded as raw material, then users of it would have to pay the tax.

In the course of further discussion, it was suggested that, under the re-manufacturing clause, the mill might have to pay 6% tax, and then, if the lumber were manufactured into furniture, another 6% would be levied on the finished article. What was really required was a ruling on the subject, and the idea of sending a joint deputation with the Montreal Lumber Association was approved in order to obtain full information on the subject.

On the point of what constituted re-manufacturing, Mr. Campbell stated that the Ottawa authorities had previously ruled that dressing of lumber did not constitute further manufacture.

It was also pointed out that the tax of 6% would operate against Canadian buyers as compared with those from the States. While Canadian buyers would have to pay the tax, which would no doubt be incorporated in the price charged by the mill, American firms would be exempt from this 6% charge, and would thus be able to obtain their lumber cheaper than domestic buyers.

The chair was taken by Mr. Bock, and the discussion was taken part in by Messrs. A. Campbell, W. A. Filion, C. Villiers, C. A. Spencer, and others.

Following this meeting, it was arranged that a deputation from the Montreal Lumber Association, the Montreal Wholesale Lumber Dealers' Association, and the Wholesale Lumber Dealers' Association, Toronto, should visit Ottawa on May 17, with a view of obtaining information as to the tax, and particularly as to the clauses dealing with the re-manufacture of commodities.

## Interviewing the Ottawa Authorities

The deputation consisted of Messrs. D. H. McLennan, of the McLennan Lumber Company, Montreal, president of the Montreal Lumber Association; Arthur H. Campbell, of the Campbell, MacLaurin Lumber Co. Ltd., of Montreal; G. W. Grier, of G. A. Grier & Sons, Ltd., of Montreal; J. S. Bock, Eagle Lumber Co. Ltd., chairman of the Montreal Wholesale Lumber Dealers' Association; O. Page, Cardinal & Page, of Montreal; A. J. Smith, Albert J. Smith Lumber Co. Ltd., of Montreal; C. E. Plant, C. E. Plant Lumber Co. Ltd., of Montreal; W. A. Filion, of E. H. Lemay, Montreal; A. E. Clark, Edward Clark & Sons, Ltd., of Toronto; A. E. Eckardt, the R. Laidlaw Lumber Co., of Toronto; D. C. Johnston, Union Lumber Company, of Toronto; C. E. Fleming, C. E. Fleming Tie & Lumber Co., of Ottawa; Frank Hawkins, secretary of the Canadian Lumbermen's Association, and others.

The deputation interviewed Messrs. R. R. Farrow, Commissioner of Customs and Excise, and T. R. Russell of the Business Profits Department and after being introduced by Mr. McLennan, asked a number of questions bearing on the tax. The interview was of an informal character, every member of the deputation taking part in it. The deputation inquired as to what effect the tax would have on the lumber trade, and how it would be collected, having special regard to the fact that lumber was re-manufactured into many forms of commodities.

From the statement by Messrs. Farrow and Russell it appears that the tax, instead of being collected entirely at the source, that is from the mill, will be mainly collected from those who actually man-

ufacture the lumber into sashes and doors, boxes, furniture, etc. The regulations governing the collection of the tax are not yet complete, but their broad lines will be such that the millmen will not pay the tax, unless the lumber is sold to a consumer or to a wholesaler or manufacturer who does not hold a license. The last licensed manufacturer or licensed wholesaler pays the tax to the Government—no matter what numbers of hands the raw material or semi-manufactured material passes through. A licensed wholesaler, selling to unlicensed manufacturers, will pay the tax, incorporating the tax in the price.

## What Montreal Wholesalers Desire

At a meeting of the Montreal Retail Lumbermen's Association, held on May 16th, the following resolution was passed:—"That the Minister of Finance be asked that whatever sales tax is levied by the Dominion Government on the lumber trade, be assessed on the producer at the source of manufacture, and that no further tax be collected, for the reason that a tax on re-manufactured lumber will lead to confusion."

During a brief discussion it was suggested that the sales tax under the proposal of Mr. Fielding would lead to considerable complications, and that it might be levied twice over, thus increasing the cost of lumber.

The B. C. Wholesale Lumber and Shingle Association has wired Mr. Fielding suggesting that the tax should be collected at the source and not passed on as under the old system.

## Lumber Manufacturer Carrying Heavy Burden

A representative firm in the Midland district, writing the "Canada Lumberman" in regard to the sales tax say that it makes no particular difference to them as they have sold their 1923 production at certain prices plus sales tax. The president of the organization added that there is a much greater element of risk in the lumber business than in any other line. There are conditions over which the lumberman has no control and which do not apply to the average industry. In a marked degree this is the case from the time the timber is taken from the stump until placed on the market. Between various taxes, Compensation Board assessments and other costs, the lumber manufacturer, if he is going to remain in business, is carrying a burden beyond the limit which it can be done without passing on additional cost to the consumer.

Considering the present high cost of material and labor, further increases will doubtless tend to reduce consumption and demand and from the standpoint of good business, the policy of manufacturers respecting production will doubtless be to govern themselves according to the demand and market conditions. Should there develop restricted market conditions and demand for the goods that the lumberman produces, their policy would be to curtail production pending an improvement, and the speaker thought that other manufacturers would, doubtless, follow the same course.

## Want Modification of Proposed Measure

The question of the Sales Tax has been under the consideration of the Montreal Wholesale Lumber Dealers' Association and of the Montreal Lumber Association. The subject was first taken up by the Montreal Lumber Association at a special meeting held on May 14, under the presidency of Mr. D. H. McLennan. As a result of the discussion, it was decided to send a telegram to Mr. Fielding asking him to receive a deputation with a view to the modification of the clauses relating to the re-manufacture of lumber, and the method of collecting the tax. The telegram expressed satisfaction with the change in the Sales Tax, in so far as it applied to the source. At the same time, it was pointed out that a certain amount of trouble might be anticipated owing to the difficulty of ascertaining the exact amount of lumber that could be considered as raw material in the manufacture of such commodities as doors, sashes, windows, etc. The opinion was also expressed that this difficulty could be obviated by applying the tax to sawn lumber only, which would be collected at the source and which would simplify the situation.

# Provisions of New Measure Set Forth

The Minister of Finance states that the new tax will be six per cent., to be "collected at the source," coming into effect Jan. 1st, 1924. It would appear as if the chief points in the new measure are as follows:—

A manufacturer producing goods to the value of \$10,000 per year will be required to take out a sales tax license at a cost of \$2.00.

Wholesalers selling fifty per cent. of their sales to manufacturers holding a sales tax license will be permitted to take out a license.

The product of a sawmill will only be taxed when it is not to be used as raw material for "further manufacturing." Shingles and lath, doors, sash, etc., will be subject to the tax when sold by the mill, being regarded as finished products.

A straight retailer, not operating a planing mill, will pay a price in which the manufacturer or wholesaler has included a six per cent. tax. That will be the end of it for him, as he will not have to collect the tax.

The retailer, who operates a planing mill, and who sells \$10,000 worth of "further manufactured" product per year, will have to take out a sales tax license. He can buy material for his planing mill without any tax upon it but,

when he sells his "further manufactured" product, it will be subject to six per cent. tax. On his purchases of material which he intends to sell without putting it through the planing mill, there will be a tax when he buys and no tax when he sells.

Imports will be subject to six per cent. tax on the duty-paid value, unless imported by a manufacturer, to be used in the production of articles for sale.

The date when a refund on account of sales tax with respect to goods sold at a price fixed before May 12th 1923, is put further back to June 30th 1924, instead of March 31st 1924.

It is said that the intention of the Finance Minister is that the tax shall not be shown in the invoice as a separate item, but shall be added to the price.

The experience of former years suggests that the whole situation may yet be changed by later announcements. However, if it goes into effect as outlined above, it is pointed out, the situation will be very serious for the retailer, who will be both paying and collecting taxes from the government. He will be paying a heavy tax on all stock that he does not "further manufacture" and he will be collecting a heavy tax on all stock that he does "further manufacture."

## Toronto Lumbermen Hear Tax Explained

The new six percent sales tax, its interpretation and application was the principal theme of discussion at the regular monthly meeting of the Wholesale Lumbermen's Association, Inc., held at the Albany Club on Friday evening May 18. There was a good attendance and another feature was an address by T. W. Gibson, Deputy Minister of Mines for Ontario, on the "precious metals" of the province.

Concerning the conference recently held in Ottawa regarding the new sales tax, announced by Hon. W. S. Fielding, Finance Minister, with the Commissioner of Taxation, interesting reports were presented by A. E. Eckardt and D. C. Johnston. These members represented the Toronto trade and, included in the delegation, were lumbermen from Montreal and Ottawa. The deputation numbered about thirty. Mr. Eckardt summarized matters in pointing out that the information regarding the application and collection of the new sales tax of six per cent., which will come into effect on January 1st, 1924, was not complete as yet and its interpretation was conflicting. In general he said that the tax would be collected "at the source" upon the sale of manufactured products. The product of a sawmill will only be taxed on the sale by the mill in cases in which it has been sold for ultimate consumption. This will include sales of shingles and lath and rough building material which is not to be further manufactured.

Lumber or timber which it to be further manufactured in a planing mill, sash and door factory or other plant using lumber as a raw material, will be sold by the sawmill without a tax. When it has been further manufactured, its sale will then be subject to a tax of six per cent.

All manufacturers producing goods to the value of \$10,000 or more per year will be required to take out an annual license at a cost of \$2. Wholesalers or jobbers selling fifty per cent of their total sales to licensed manufacturers may be granted a tax license. Wholesalers or jobbers selling to others than licensed manufacturers will be required to pay the tax on their sale prices.

### Sales Tax Included in Price

All importations will be subject to a tax of six per cent. on the duty-paid value. There will be no sales tax upon goods imported by a licensed manufacturer, to be used in the production of articles for sale. It has not yet been announced but it is understood to be the intention of the Minister of Finance, that the sales tax shall not be shown as a separate item upon the invoice but shall be included in the price.

It is learned that there will be only one tax and that there will be no tax on lumber exported. The present conditions in this

respect will be continued on and after August 1st.

On motion of J. L. Campbell and Nelson Clark a hearty vote of thanks was passed, tendering Messrs. Eckardt and Johnston the appreciation of those present for their able review of the provisions of the new sales tax, which although still doubtful on many points, was of great interest to lumbermen.

It was decided that the June meeting, in view of the annual convention of the American Hardwood Association in Chicago, during the third week in June at which many Canadians will be present, will be held on Friday, June 29th, instead of the 22nd.

Arrangements for the annual picnic, which will be held at the Lake Shore Country Club, were left in the hands of the Entertainment Committee, which will decide the date.

### The Mineral Wealth of Ontario

Mr. Gibson was suitably introduced by Chairman A. C. Gordon and referred to what is known as the precious metals, gold and silver. The former was secured in two ways, from alluvial deposits and the solid rock. Sixty-seven per cent. of the world's output of gold came to-day from countries flying the Union Jack. Mr. Gibson related an interesting tale of the discovery of gold in Hastings County in 1866, and told of subsequent discoveries up to the present day when the province had such valuable auriferous mines as the Hollinger, McIntyre, Dome, Kirkland Lake and others, the first-named yielding \$1,000,000 in gold every month. Unlike lumber, gold did not vary in price and was always worth the same figure, \$20.60 an ounce.

Referring to silver, Mr. Gibson spoke of its discovery in Cobalt and the subsequent developments in that great mining camp. Since 1903 when Cobalt first became known, this argentiferous area had up to the present period produced \$215,000,000 worth of silver.

At the close a number of excellent views were thrown upon the screen depicting mining operations and widely-known mines in Northern Ontario.

On motion of J. L. Campbell and F. H. Bigwood, a hearty vote of thanks was tendered the speaker for his admirable address.

A new office building is being erected by the Abernethy Loughheed Co. at Port Haney, B.C. When the building is completed the headquarters of the logging concern will be removed from New Westminster. The head office of the Stave Falls Lumber Co. is now located in Ruskin where also is the headquarters of the Ruskin Operations, Limited, subsidiary to the Abernethy Loughheed interests. Earl Selkirk formerly of Port Haney, has been transferred to Stave Falls while Harry W. Hall is now located at Ruskin.

## How Lumbermen Regard Sales Tax

(Continued from page 39)

think the extra burden should be shouldered equally by buyer and seller. It is impossible, however, to arrange the tax to please everybody but to our mind it would be well to confine the area of collection. "We do not see how this can be done in a more efficient manner than by making the manufacturer pay and not allowing him to pass it on to the other fellow. The manufacturer has to deal with labor so has considerable experience with trouble; consequently who should be more naturally fitted for the job of paying this tax?"

### Present System Will be Confusing

A Montreal lumber firm says,—"We do not like the tax to apply on finished products. It should be collected at the sawmills only; otherwise the tax would lead to confusion as the firms that carry on a lumber business with the sash and door factory, will find it almost impossible to determine exactly the quantity of lumber used in the finished product."

Another eastern concern in reference to increasing the sales tax on the finished product of lumber writes,—"We believe that the tax will act unfavorably on the lumber trade, and woodworking industries. Under the Act, if two parties handle lumber, one will pay less tax than the other, who is both a retailer and manufacturer. As many retailers also manufacture, they will be obliged to take out a license and pay the Government 6% on the price they sell at, whereas an unlicensed trader will pay the tax at the mill. With the high rates now prevailing, the unlicensed dealer will pay much less tax, which, in our opinion, will make the tax very

unfair. This is an injustice, which will result in unfair competition. The tax will stop the building trade, and will lead more of our countrymen to go over the border. The government are inquiring why so many of our good tradesmen are going to the United States. The answer is to be found in taxation of the character referred to. If we are to have the tax, its operation should be postponed until January 1.

A representative eastern concern says "If the present proposed Act is carried out it will not only be troublesome to collect but very expensive to all concerned."

A Chatham, N. B., firm remarks,—"We are of the opinion that the sales tax of six percent on lumber is quite too high. We would favor having the full amount of the tax collected from the manufacturer."

A Halifax lumber merchant observes,—"We believe that the new measure will strangle trade and be a further burden on the manufacturer which is quite heavy enough as it is. To double the sales tax at a time when business is on the upward trend, will prove a source of disturbance in the market and cause hesitancy on the part of buyers."

A large firm in the Muskoka District say:—"We hear considerable discussion in regard to the tax. There seems to be a feeling that it is going to retard business to a certain extent and re-act on the trade as a whole. We think that the tax is too high altogether, that it should be considerably reduced and should be collected at the source of origin. We believe this would place everyone on an equal basis for this reason—that all manufacturers would know then why they had to absorb the tax, and would endeavor to get that much additional for their lumber."

# Standardization is Making Great Progress

The standardization movement in the lumber industry took a distinct step forward as a result of the meeting of the Consulting Committee on Lumber Standards, held in Chicago recently.

Because of the progress thus made all those who are sincerely devoted to the lumber standardization movement are definitely encouraged over the prospects of early completion of the program publicly announced a year ago.

The meetings were well attended and the sessions began early and constituted an almost continual hard grind of labor until late at night, as the various sub-committees separated for special conferences.

Although much collateral good was accomplished the chief elements of progress were the ratification of basic lumber grades and the establishment, so far as the Committee was concerned, of the standard sizes of boards, dimension and finish. The grades recommended by the Committee cover the whole range of lumber qualities, divided into two general groups. The first basic group will be known as Select Grades A, B, C and D; and the second basic group will be known as Common—No. 1, 2, 3, 4 and 5.

The greatest labor was expended in the consideration of sizes for boards, dimension and finish. The Committee acted favorably upon the recommendation of the Forest Products Laboratory both in the nomenclature of the basic grades and in most of the details of lumber sizes.

It was decided that the terms "inch board" and "two inch measurement" be dropped, and in the interests of sound business the term "standard board" and "standard dimension" be adopted and applied to both hardwoods and softwoods.

It was also decided that 13/16" S2S (measured at standard commercially dry shipping weight and moisture content for each species) shall be adopted as a maximum thickness of the standard "factory" board, and "box" board, which comprises lumber for remanufacture, graded on the basis of

A—Clear cutting

B—Sound cutting, or

C—Quality of the piece as a whole.

It was recommended that 25/32 of an inch S1S or S2S (measured at standard commercially dry shipping weight and moisture content for each species) shall be adopted as a minimum thickness of the standard "yard" board, which comprises lumber for general construction and other ordinary purposes, graded on the basis of the use of the piece as a whole.

For standard dimension stock not more than 12" wide, the size recommended was 1 5/8" S1S or S2S (measured at standard commercially dry shipping weight and moisture content for each species).

It was agreed that 3 5/8", 5 5/8", 7 1/2", 9 1/2" and 11 1/2" S1E or S2E (measured at standard commercially dry shipping weight and moisture content for each species) be adopted as the standard finished widths of boards, dimension and finish and that consideration be given to the general production of 1/2" boards when not over 8" wide.

It was also the opinion of the Committee that commercially dry lumber should not weigh more than the standard shipping weights approved by the Central Committee on Lumber Standards for lumber of the various species manufactured in each region.

## How Easterners Would Adjust Tax

At a meeting on May 25th of the Montreal Lumber Association, the Montreal Wholesale Lumber Dealers' Association, and the Montreal Retail Lumbermen's Association, the question of the sales tax in relation to the lumber industry was discussed, and it was decided to send the following letter to Mr. Fielding. The letter was forwarded by Mr. H. C. Beatty, secretary of the Montreal Lumber Association.

"I have the honour to inform you that the members of the Montreal Lumber Association of the Montreal Board of Trade, The Montreal Wholesale Lumber Dealers' Association, and the Montreal Retail Lumbermen's Association, having given consideration to the proposed sales tax to be effective 1st January 1924, as set forth in the resolution contained in your Budget's Speech and subsequent amendments thereto, respectfully suggest that it be further amended to adjust, what to them appears to be a weakness, not affecting its rate of percentage, or its general principle, but the proposed method of its application which in their opinion would be susceptible to irregularities. It is sincerely believed that to permit raw materials, particularly manufactured articles, and importations to any manufacturer or any wholesaler to be tax free, would cause vexatious complications and difficulties in the eventual collection of the sales tax on all such commodities as they become further manufactured.

"This objection is particularly applicable to lumber, and therefore, the said Associations pray you to seriously consider their suggestion that a 6% tax be levied on all sawn lumber (as it leaves the sawmill) and on importations of lumber, and as such is absorbed or incorporated into a further manufactured article an additional 6% tax be paid by the manufacturer, but that he be allowed in computing his sales tax return to the Government, to deduct the amount of the 6% tax on the cost of his raw material."

## FOREST AND MILL IN PICTURE

## Last of Lumber Going Out From Whitney

L. Van Meter, manager of the Dennis Canadian Lumber Co., Whitney, Ont., says that having disposed of their timber last year, they did not do any lumbering during the present season. They sold all their camp equipment and disposed of the greater part of the machinery from their mill. The remainder is being scrapped and the mill dismantled.

The logging locomotive and steam log loader of the Dennis Canadian Co. are going to the Hope Lumber Co. at Ruel, where they will be used by that organization in loading and hauling logs for their operations at that point, after which the equipment will be taken over the Canadian National & Algoma Eastern to the mill of the Hope Lumber Co. at Little Current, Ont.

The Dennis Canadian Co. have about 6,000,000 feet of lumber yet to ship, practically all of which is sold and is being moved out as rapidly as possible.

Mr. Van Meter expects to stay on the job until about August 1st, when he hopes to have things in such shape that it will not be necessary for him to remain longer. He will then return to his home at Cadillac, Mich., where he will take charge of a metal-working factory in which he is heavily interested financially.

## Lumber Firm Issues Guarantee Form

The A. E. Gordon Lumber Co. Toronto, has issued a guarantee form which is rather unique in the way of a document, so far as the disposition of forest products is concerned. When a salesman's order is received at the head office and is properly filled out and acknowledged, the typewritten confirmation bears the red seal of the company—the "seal of quality."

There is on the salesman's order form, the following which avoids any possible misunderstanding: "Orders are not binding until accepted by head office at Toronto and buyer's signature constitutes acceptance of contingencies and conditions mentioned in head office acknowledgement. Deliveries prices based on rates in effect at time of sale. Any subsequent increase shall be charged to buyer's account."

The guarantee form itself is neatly lithographed, with an artistic border in green and in the upper left-hand corner a spruce tree bearing the words "we serve." On the certificate, which is attached to every invoice sent to customers, appears at the top the name of the firm, "The A. E. Gordon Lumber Co., Canadian Forest Products Wholesale, suitably engraved, and the following wording:—"We certify that the contents of—car number—shipped by us to—at—under date of—192—are exactly as described in our acknowledgement of this order and our invoice covering this shipment."

"We exert every effort to prevent error but the human element in business prevents total exclusion. In the event that error is proven, we further certify that such error will be adjusted to the satisfaction of the consignee."

"Conditions which may affect the contents of this shipment after delivery are not to be constructed as included in this certificate."

## Forest Exhaustion Brings High Prices

Lumber production in the United States has been steadily decreasing for 13 years, and this in the face of a need unparalleled in the history of the country. According to a bulletin just published by the U. S. Department of Agriculture, of 37 Eastern and Southern lumber-producing States, 36 showed a decreased cut and only one a slight increase in 1920; while Pacific Slope States all report substantial increases, showing that the center of production is shifting to the Western States, the last of our softwood reserves.

Thirty years ago after the depletion of New York and Pennsylvania white pine sections, the American lumber market was drawing its supply from the Great Lake States. When the source in those sections became exhausted and the forests no longer able to supply the demand or furnish enough to keep the mills in operation, the industry moved to the Southern Yellow Pine region, and is rapidly duplicating the same procedure there. The inevitable result follows that within the near future the American people shall be wholly dependent upon this reserve of all-purpose softwoods, the Pacific Slope. Not only is this the only remaining domestic source of softwoods, but a recent survey of the world's supply of this commodity discloses the fact that there are no foreign forests of this character that may be drawn upon when those of the United States are exhausted.

These figures and facts suggest several questions that touch the welfare of every individual in our growing population. What will be the effect when our timber is gone? What will be the several stages of adjustment? What steps should be taken to meet the national needs? What is being done in this respect?

The average rate of decrease over the last 13 years has been about 2 per cent. a year. The figures for 1920 are about 27 per cent. lower than the high production peak that was reached in 1907, when we produced about 46 billion feet. The United States has passed the high point and the present tendency downward is permanent. Since this is the case there must be some active steps taken to insure permanent local sources of timber for the future.

## High Price Paid for Spruce Logs

Spruce logs are said to be selling at \$22 to \$25 Per M feet at Springhill, the rafting grounds of the St. John River, five miles above Fredericton, N.B. These prices for what are known as "bank logs" are near the highest level ever reached on the river and are regarded as an indication of the sound condition of the lumber market. Some doubt exists as to the ability of mills which depend upon buying "bank logs" for their sawing material, to secure a sufficient supply to make operation worth while this season.

Most of the sawmills in the vicinity of Fredericton are now well under way. The mill operated at South Devon by Stanley Douglas, Limited, is running once more and will cut about 8,000 feet this season. While this was the approximate amount of last season's cut at the plant, operations this season are about a month later than last spring when sawing was started on April 18th. Last year cutting was also continued until late in the fall.

The Lloyds of Sittingbourne, England, who are the largest newsprint producers in the Old Country, turning out between 500 and 600 tons daily, and large users of pulp, have sent A. A. Richards to Canada, to investigate conditions with a view to establishing a pulp mill in Quebec or the Maritime Provinces. Mr. Richards is looking into all phases of the question and will report back to his firm on the economy and feasibility of Lloyds producing their own pulp in connection with their large newsprint mill.

## The Last Plasterer—And Then What?

From the Wall Street Journal

There is reason to apprehend that bricklayers will become as uncommon as veterans of the War of 1812. When one reflects on the princely wages of bricklayers, it is a lamentable thought that they have to die, but, as with all the world's great, no way has been found to save them from this unhappy fate. An occasional veteran of the War of 1812 is recruited by fraud, and an occasional apprentice is admitted to membership in the Bricklayers' Union, but in neither case does the number of recruits begin to equal the mortality list.

The National Association of Manufacturers says that the number of apprentices admitted to the Bricklayers' Union last year was less than half the number of members taken by death. At this rate, bricklaying will soon become a lost art, and our grandchildren will marvel at our skill in laying brick as we wonder at the lost processes of our remote ancestors who understood and practiced the tempering of copper.

The passing of the plasterers gives even greater reason for apprehension and disquietude, because they are passing even faster than the bricklayers. We replenish our streams with trout and we protect our song birds from extermination, but we take no thought of our plasterers. By reason of the limitation of apprentices, most of our plasterers are aged men and will not be with us for long. The years are not many when we shall regard with awe the last survivor of the Plasterers' Union very much as we regarded the last survivor of the charge of Balaklava.

With the growing scientific interest in these matters, it is not unlikely that the professors at our institutions of learning will soon undertake a study of this disappearing type as they do the small remnant of some of the aboriginal tribes. While there is yet time, we suggest that there be preserved on the phonograph for future generations the voice of a plasterer discussing long hours and slave wages, for the era is not remote when all we shall know of this species must come from a study of the fossil remains.

What antiquarian interest will there soon be in a fragment of freshly-spread plaster! We can see the last plasterer, a centenarian on his death-bed, painfully but skilfully spreading this fragment, at the rate permitted under union rules, for preservation in the Metropolitan Museum of Art, alongside the fragment of King Tut's flagon.

# Stone Lumber Company Branching Out

**Operating Planing Mill and Manufacturing Dowels From Lower Grades at Hilton Beach, Ont.—Hardwood Lumber of Marketable Grade Cannot be Produced for Less Than Fifty Dollars per Thousand, Declares Veteran Head of Organization.**

Up north on St. Joseph's Island in the pretty little village of Hilton Beach is the plant of the Stone Lumber Co., Limited, manufacturers of hardwood and hemlock lumber. W. J. Smith is the president of the organization and is an enthusiastic lumberman. The mill started sawing early in March but it is hard and expensive work piling lumber in snowstorms and in weather that was then below zero. The firm have some 2,000,000 feet of logs which they want to get into pile before the stain shows.

The Stone Lumber Co. have erected another building to be used as a planing and dowel mill, for they find that they must realize from the lower grades of hardwood more money than they now bring. In reference to the manufacture of dowels, the company say that it is a long way from Hilton Beach to Finland, but the dowel makers in the latter country seem to have considerable to say of the price which Canadians get for their output in the Old Country.

Mr. Smith states that hardwood lumber of marketable grade cannot be produced for less than \$50.00 per M, and for the last two years the product has not nearly averaged that. The difficulties of manufacturing hardwood lumber profitably and a reference to the instances where it has not been done would, in Ontario alone, fill several volumes.

The shipping facilities of the Stone Lumber Co., both by land and water, are good. All water shipments are from Hilton Beach and rail by the C.P.R. from Dayton, Ont. The company are taking out a much larger cut than last year. They had their logging done before the bad end of the winter came but, unfortunately, according to Mr. Smith, started sawing too early and incurred a loss which hardwood lumber cannot stand.

Writing to the "Canada Lumberman" recently, Mr. Smith said,—“Our new building is completed and part of the machinery is being set up. Our company is depending on a road from Hilton Beach to Canoe Point which the local authorities have assured us for the last five years would be built. It is not yet ready and if it is not completed this season, the Stone Lumber Co. may close their operation at this point and ship their logs, although they are loath to do so as the loss would be a serious one to Hilton Beach. A peculiar thing about the road matter is that another section of St. Joseph's Island where the highway system is reasonably perfect, has received a grant of \$20,000, while the Hilton township has not got even \$2,000 or \$3,000, to build this road. It is understood, however, that Hon. Mr. Bowman has assured a delegation from Hilton township that

On the left is Glyn Smith and on the right, his father, W. J. Smith, President of the Stone Lumber Co., Hilton Beach, Ont. Note the healthy hound pups which each has in his arms

consideration would be given, and, therefore, we are hopeful to start setting machines up within the present month when the road should be under way.”

Mr. Smith makes an assertion which no one will dispute. It is to the effect that the past winter was the most severe ever experienced and that the first white child born in that section ninety years ago never remembers anything like it. He humorously adds,—“We all hope that if he lives another ninety years he will not see another such a season. The snow was 4 feet deep on the level and 15 feet in the drifts, and in the middle of April a great deal of it was still visible.”

Mr. Smith was born in England and educated at Dr. Reddick's Grammar School near Chester. In 1881 he came to Canada with his parents and settled in Algoma. Subsequently he became an apprentice in the Michigan lumber woods in 1883. With the exception of eight years spent on the lakes, he has followed the lumber game ever since. In 1910 he left the Seaman, Kent Co., Limited, to take charge of the interests of the Stone Lumber Co., at the head of which organization he is to-day. He has many friends in the lumber industry.

His son, William Glyn Smith, served overseas during the war, joining the 26th Battery at Barriefield as a gunner. Glyn is an excellent example of the class of men produced in the Canadian woods, being 6 feet, 3 inches, tall, 190 lbs. in weight, and handy and alert. As a youth he spent his holidays at the mill, sometimes in the Michigan woods acquiring practical lumbering knowledge, and was educated at Sault Ste. Marie, the High School at Meaford and the University of Toronto. Glyn Smith returned home after four years' service though not with the 26th Battery, which was practically wiped out and the few survivors were put into the 17th and 18th Batteries, C.F.A.

## Completing New Plant at Manseau

Savoie & Co., Limited, of Manseau, Que., have completed a new woodworking plant on their present site and have installed a Corliss engine, 250 h.p. and two boilers. The building is of brick and steel with corrugated iron roof. Savoie & Co. have direct sidings from the main line of the Canadian National Railway, and have provided for several truck lines running through the mill which will facilitate the handling of lumber to the different machines. The mill building is 140 feet long by 85 feet wide.

Mr. Savoie intends specializing in milling in transit and the equipment is of the latest type consisting of one No. 91 fast feed planer and matcher; one No. 472 automatic feeding table, with provision made for an additional one later; one No. 94 planer and matcher; one No. 108 moulder; one No. 283 band resaw; one No. 289 band resaw and one No. 257 self-feed rip saw. All of the equipment was supplied by the P. B. Yates Machine Co., Limited, of Hamilton.

Savoie & Co. are sparing no expense in making their plant one of the finest in Eastern Canada and expect to have the same in operation early in June.

Winter view of Stone Lumber Co.'s mill on St. Joseph Island

## Bathurst Company Mills Now Sawing

The Bathurst Co., Limited, recently started their sawmills at Bathurst, N.B. The resumption of activities was a little later than usual owing to the backward spring, as everything was held up owing to the ice and high water. Angus McLean, president of the company, looks forward to a very fair season's operation. He says the demand for spruce has slackened somewhat, so far as the American trade is concerned, but things are looking a little better in the European market and prices are holding about steady.

So far as the pulp mills of the Bathurst Co. are concerned, they are running at full capacity, and Mr. McLean expresses the hope that, within the next two or three months, the new newsprint mill of the company, which is now nearing completion, will be in operation.

## Golf Entries for The Laidlaw Trophy

It is expected there will be an unusually active and strenuous contest this year for the Laidlaw Cup, which is open for competition to all amateurs who are members or employed by firms belonging to the Wholesale Lumber Dealers' Association, Toronto. This will make the third year of competition. The winner of the first year was A. Wilson, of the Canadian General Lumber Co., and last year A. N. Dudley, wholesale lumber dealer, captured the trophy.

The conditions governing the competition during the present season specify that the matches may be played over any golf course in Toronto and all entries have to be made with Horace Boulton, secretary of the W.L.D.A., Toronto, before June 30. The winner of the cup is allowed to retain possession of it until this year's tournament is concluded and the victor determined. The cup bears each year the name of the winner and becomes the permanent property of the holder when won three times.

Other conditions governing the contest are:—Each game shall consist of eighteen holes match play on handicap, each player to use the handicap of his own club, the number of strokes given to be fixed by three-quarters of the difference in the handicap.

A schedule will then be prepared, after all the entries are in, and a draw made. Players will then have two weeks in which to play off their matches.

Byes will be arranged in order that the number of players shall be 16, 32 or 64, as may be required.

All games shall be played under the Rules of Golf, as approved by the Royal Canadian Golf Association, and local rules of the club for the course over which the match is being played.

The Committee reserve the right to alter the terms or dates on the program.

## Will be Busy Along the Miramichi

W. B. Snowball, of Chatham, N.B., reports that log-driving conditions are very favorable in that section of the country and rafting has just commenced. The company's mill began operations on June 1st. There have been no labor troubles in connection with the mills that have started work and it is not anticipated there will be any. Wages are slightly higher than they were last year and it looks, Mr. Snowball says, as if there will be plenty of work on the Miramichi during the whole season.

## How Floods Hit Some Eastern Firms

A representative of the "Canada Lumberman," who lately visited several sections of New Brunswick, sends some interesting information in regard to the serious floods which swept over certain towns in the East.

Imperial Products, Limited, of Woodstock, had their whole town plant, including the office, taken off its foundation by the flood of water and logs when the electric light and power dam broke. Even the company's large safe went down the stream when the office was carried away. The firm managed to get their books out. The loss to the Imperial Products is a heavy one. The firm, of which Messrs. Page and Teed are the managers, have a big farm and timber limits and also operate a sawmill. They have not yet definitely decided what they will do in resuming their former activities but it is likely that they will continue the most of them.

The Smith Lumber Co., Woodstock, N.B., had 800,000 feet of logs taken off their premises as well as part of their mill and office torn away by the debacle when the power dam above the town broke loose. The loss ran into many thousands of dollars. The firm have recently fixed up the mill and begun their drive from further upstream. They have about 600,000 feet of logs which were held by part of the dam. The steel bridge over the river on the main street, connecting the two sides of the town, was also demolished in the freshet. A temporary structure has been swung across the stream until such a time as arrangements can be made for a new one.

## The Timber Supply and Land Use

The necessity of providing enough timber to supply the country's future requirements, and inability to use the bulk of cut or burned over forest lands for agriculture are two problems now confronting the Nation, declares the U.S. Forest Service, in an article in the 1922 Yearbook of the United States Department of Agriculture, entitled "Timber: Mine or Crop?"

"The depletion of timber supplies and the reduction of forest area largely through timber mining has created one national problem, that of providing the timber necessary to meet future requirements," says the article, "and inability to utilize cut or burned-over forest lands for agriculture has created a second and related problem—that of land use."

In discussing the land utilization problem the Department of Agriculture says that the American people have commonly believed that all our forest lands are agricultural, virtually regardless of soil, topography, location, or climate, but that it is now beginning to be understood that this belief rests on a serious misconception.

"The tradition that all cut or burned over forest land, or even the greater part of it, is being taken by agriculture is not borne out by the facts," the article declares. "The total area of forest lands already cut or burned over, exclusive of farm woodlots, that has not been taken for agricultural use has already grown to 181,000,000 acres. Furthermore, forest land is being cut over at the rate of about 10,000,000 acres yearly and probably more than half this area is in virgin forest."

"By recognizing the importance and urgency of the two great national problems of land use and timber supply and by taking full advantage of the powerful forces of public necessity and private opportunity which are working toward the solution of both problems, we can grow on our forest lands timber crops sufficient to meet our wood requirements if public agencies and private owners each do their share. The alternative is idle forest lands and timber bankruptcy."

## Production of Spruce Lath and Fuel

In the article on "Does it Pay to Produce Spruce Lath?" on page 48, May 15 issue, an error occurred in connection with the summarizing of the figures. In order to make the position clear, we give the correct figures which summarize the contention of the writer:

750 cords of slabs and edgings for fuel at \$3.66		\$2,745
350,000 lath at \$3.50	\$1,225	
250 cords slabs unsuitable for lath at \$3.66	915	2,140

Which leaves a balance in favor of fuel of \$ 605

## New Concern Promoted by Mr. Power

The Bridgewater Lumber Co., who were recently granted a charter, will shortly establish a new industry at Cap Rouge Heights in the vicinity of Quebec Bridge. W. Gerard Power is the chief promoter of the new organization. Mr. Power says that the equipment for the new mill has been ordered and just as soon as possible construction will be started. The mill will have a floor space of 7,000 square feet, and when completed will give employment to a large number of hands.

"The main object of the new company," said Mr. Power, "is to saw and dress lumber which will be brought from the bases of supply by rail. The lumber will be specially dressed for export to the American market in connection with the Power Lumber Co. with its head office in New York City. The site selected is a splendid one for manufacturing purposes. Being close to Quebec Bridge it facilitates the transporting of lumber to the United States."

## Many Improvements to Dalton Mill

Austin & Nicholson, Limited, of Chapleau, Ont., have made extensive improvements to their plant at Dalton Mills, Ont. The new equipment consists of a tie edger, supplied by the E. Long Mfg. Co. which is of a double special design. There has also been supplied an extra slab slasher behind the tie edger. The company has built a burner 30 feet in diameter by 70 feet high, and purchased an alligator from West, Peachy & Sons, of Simcoe, Ont. This new warping tug is called the "Alice."

Austin & Nicholson have under construction at Dalton Mills a 100-room sleeping house with barber shop and reading rooms. Each bedroom will be equipped with a double deck steel bed. The firm are also erecting ten additional houses in the village for the convenience and comfort of their married employees.

### Expansion of the Association Spirit

A meeting was held in Montreal about six months ago to consider the question of forming a Retail Lumbermen's Association. It was attended by not more than a dozen persons, some of whom were frankly skeptical as to whether such an association could be formed, and as frankly skeptical as to whether it would, even if formed, achieve any results worth while. It was argued by some that previous efforts by others to organize had met with meagre support, and that there was no reason to suppose that retailers were in a more responsive mood at that period. The Association however, was formed, it being decided that it should be independent of any other organization, a suggestion having been made that it should be affiliated with the Chambre de Commerce.

To-day it has gone beyond the limits of a purely local organization—it has become the Province of Quebec Retail Lumber Dealers' Association. The preliminary work involved an immense amount of detail, more than is generally known. The response by dealers outside Montreal to the invitation was surprisingly large, considering the indifference with which so many men regard trade associations. It is obvious that the retail lumbermen have a better appreciation of the benefits of co-operative action than retailers in some other branches of trade. A weak association is of little value—it is only by securing the support of a substantial number that any effective work can be done. In every branch of commerce there are difficulties and practises which hamper trade, and which require adjustment. Local and general questions affecting the interest of a trade are also coming up from time to time. These can alone be dealt with satisfactorily by a combination of those directly concerned. Mere criticism is of no value, unless the members of a trade follow this up by getting together and taking united action. Associations provide the most potent method to this end, and the increasing recognition of this fact has resulted in the formation of guilds in the lumber and other trades.

The Province of Quebec Retail Lumber Dealers' Association is organized on a democratic basis. While the headquarters are in Montreal, each district has its representatives, who are able to consult with other retailers in the particular districts, and deal with lumber questions as they arise, referring the larger matters to the general board, to be discussed at the periodical meetings which will be held in Montreal. The Association made quite a good move in inviting Mr. Horace Boulton, the secretary of the Ontario Retail Lumber Dealers' Association, to give the members the benefit of his experiences in similar association work. The man, who has travelled

the road can always tell of the rough spots to be avoided, and Mr. Boulton knows all about those rough spots.

Now that contact has been established with the Ontario retailers, the suggestion is offered that the Quebec retailers should get into closer personal touch with their fellow dealers in Ontario by means of a joint Provincial Convention. The problems in both provinces are, after all, much of the same character, and free discussion of them by members of both Associations in a joint convention will do more to foster friendship than columns of long distance talk concerning the Bonne Entente.

It is surprising how gatherings of this nature help to dissolve misunderstandings, and how quickly men will get together on a common platform when matters are put to them in a fair spirit. Most of our misunderstandings are due to the fact that we do not appreciate the viewpoint of the other fellows—of those who live, say in another province. The personal touch will help to remove those misunderstandings, and will make for a more harmonious feeling, both in material and trade matters.

The wholesalers of Montreal, too, have not been idle. Their organization is now on a well-established basis. Some good work has been accomplished; part of it has been of a detailed character, and part of it has had to do with questions which effect wholesalers all over the Dominion. Both the wholesale and retail federations require time to achieve results—the growth is oftentimes slow, but the work is nevertheless beneficial, not only to the members, but to the industry as a whole.

The social side of the Association is not to be disregarded. In Montreal, wholesalers, who have been in business for a number of years, frankly state that they had met, through the Association, other wholesalers whom they had known for a long time by name, but whom they had never greeted personally. Associations of this kind perform a useful function in thus bringing together members of a particular trade, by extending business relations, and by promoting social friendship.

On the purely trade side, a Credit Bureau is rightly regarded as the backbone of any association. Following the example of Toronto and Ottawa, the Montreal wholesale and retail associations have instituted these protective sections. They afford information of a special character which can be secured through no other channels. The data obtained by inquiries, is specific—no mere general information which may mean something or nothing but definite facts, which are the result of the collective experiences of a large number of firms dealing with those concerned. The cost, too, is comparatively small, having regard to the protection afforded, and to the possibility of heavy losses in the absence of such exact information.

### How Long Will The Exodus Continue?

"What is wrong with Canada?" was the question asked by an interested Canadian the other day when told of the exodus of so many mechanics and others from the Dominion. They had been attracted across the border by the exceptionally high wages prevailing in the different trades. This, of course, is a magnet that will draw all artisans from near and distant points.

The citizen, who moves here and there with no fixed place of abode and makes a shift every time the lure of higher pay looms up, is not the greatest asset to any town or country. When he considers the sacrifice he frequently has to make in disposing of or packing and crating his household effects, paying railway fare, head tax, etc., not to speak of lost time and other "overhead," he is, possibly, not as well off in his new location as in the old one, provided he has a steady job at a fair rate of remuneration. However, it is only the dollar and the immediate present that the most of these movers see. Their horizon is bounded by the weekly pay envelope and the immediate present.

Many stories are current regarding the large number of people who are leaving the Dominion. It is reported unofficially that 62,000 Canadians paid the U. S. head tax during the last nine months, and it is a well-known fact that thousands of others have dodged this levy. The U. S. Consular office in Toronto is crowded with 100 to 200 persons daily, making inquiries regarding immigration, transportation and other facts concerning the transfer of residence or position. A large number of heads of families have and are going to California and other southern States to live, but this is probably due to the fact that the majority have reached the meridian of life and intend to enjoy its sunset in ease and quietness amid congenial surroundings and an altogether delightful climate.

No one has satisfactorily solved the problem of why Canada is not able to hold more of both her incoming and native-born citizens, and something must be radically wrong in an economic, commercial, industrial or financial sense. It is reported that the exodus of French-Canadian families from certain rural and urban sections of Quebec, to the New England States is amazing, and the provincial Government is doing everything possible to stem the tide.

# Quebec Retail Association Gets Fine Start

As announced in the last issue of the "Canada Lumberman" the Province of Quebec Retail Lumber Dealers' Association, which was organized recently in Montreal under the presidency of J. P. Dupuis, is off to a strong start. The members are enthusiastic and believe that the future holds out a great deal in the way of usefulness, service and vigor for the organization.

The recent meeting in the Canadian commercial metropolis was composed of delegates from various parts of the province, which was divided into districts for the purpose of forming different centres.

Mr. Dupuis briefly reviewed the steps which led up to the formation of the Montreal Retail Lumbermen's Association and also the objects of broadening out into a provincial-wide organization. Their problems, he said were very similar and he believed that it would help in their solution if a Provincial Association were formed. Moreover, the co-operation of retailers in all parts of the province was bound to result in mutual benefit. They could all assist one another and he considered that both from the trade point of view and from the personal point, an association would be of great value. There was a possible membership of 275.

Mr. H. Boulton of Toronto secretary of the Ontario Retail Lumber Dealers' Association, who had been invited to attend the meeting, was called upon. He described the organization of the Ontario Retail Lumber Dealers' Association, outlining its history, the work it had carried out and the details of its organization. He also expressed the hope of the president and members of the Ontario association that the Quebec dealers would find it possible to organize and co-operate with the Ontario association in the many lines of work in which they were mutually interested.

The delegates submitted their reports on the advisability of forming a provincial association. From inquiries made in the various districts it was believed that the prospects of such a body were very

satisfactory and that a large number of retailers and sash and door manufacturers would become members.

It was, thereupon, decided to form the Association and that the Montreal Association be merged into the provincial body. The meeting then elected provisional officers and directors as published in the last issue of the "Canada Lumberman."

The constitution and by-laws were adopted, the objects being thus defined:—

"The object of the Association shall be to secure and disseminate to its members any and all legal and proper information which may be of interest and value to any member or members thereof in his or their business as retail lumber dealers, and—

- (a) To promote the general welfare of the lumber trade.
- (b) To secure and distribute information for the mutual convenience and benefit of its members.
- (c) To correct business abuses in the lumber industry.
- (d) To promote uniformity in customs and usages of the lumber trade in the Province of Quebec.
- (e) To standardize lumber-grading and factory work and generally to co-operate in such matters as legislation and insurance.

The date of the next gathering of the new Association was not settled but it will be called by the chairman at an early date. It may be stated that the constitution and by-laws are modelled on those of the Ontario Association. During an informal discussion after the gathering the members showed considerable interest in the possibility of closer co-operation between the two retail lumber Associations, of Quebec and Ontario and were particularly interested in suggestions for a joint midsummer outing and a joint annual convention.

## All Aboard for Retailers' Mid-summer Outing

The annual midsummer outing of the Ontario Retail Lumber Dealers' Association will be held this year on the S.S. "Cape Trinity" from July 5-9, and promises to be a trip of rare attractiveness and delight. The cruise upon Lake Ontario and through both the American and Canadian channels of the far-famed Thousand Islands is one that will appeal to lumbermen from all parts of the province. Another feature is that the trip is being planned in such a way that dealers from Eastern Ontario can join on the morning of the second day and lose none of the interesting part of the journey.

The "Cape Trinity," a staunch steamer of the Canada Steamship Lines, with accommodation for 255 passengers, has been chartered for the occasion, and will be at the disposal of the party for four days. There will be frequent stops, as shown by the subjoined itinerary.

The excursionists will visit Brockville, Kingston, Belleville, Trenton, Queenston, Niagara Falls and other points. The cost of the trip has been placed at \$40 for adults and \$35 per person for children. This includes everything—meals, berth, etc. Little children, sharing a berth with one of their parents, will be charged only \$10 each.

W. B. Tennant, of John B. Smith & Sons, Limited, 53 Strachan Ave., Toronto, is chairman of the Outing Committee, and all communications relating to reservations should be addressed to him. It is desirable that reservations should be made as early as possible.

The applications to Mr. Tennant should be accompanied by a cheque for \$20 for berth, the balance to be paid before June 21.

The schedule of the trip is as follows:—

### S.S. "Cape Trinity"—July 5th to July 9th

#### Schedule of Trip

Leave	Toronto	2.00 P.M.	Thursday	July 5th.
Arrive	Thousand Islands	9.00 A.M.	Friday	" 6th. Through American
Arrive	Brockville	2.00 P.M.	Friday	" 6th. Channel.
Leave	Brockville	3.00 P.M.	Friday	" 6th. Through Canadian
Arrive	Kingston	9.00 P.M.	Friday	Tie up for night. Channel.
Leave	Kingston	6.00 A.M.	Saturday	July 7th.
Arrive	Belleville	2.00 P.M.	Saturday	" 7th.
Leave	Belleville	4.00 P.M.	Saturday	" 7th.
Arrive	Trenton	5.00 P.M.	Saturday	" 7th.
Leave	Trenton	6.00 P.M.	Saturday	" 7th.
Arrive	Queenston	noon	Sunday	" 8th.

Special electric cars to be secured to take party to Niagara Falls and Chippewa and return to Queens-

Leave	Queenston	Sunday night	July 8th.
Arrive	Toronto	Monday	" 9th.

## New Director of Forest Rangers School

Henri Roy, Quebec, P.Q.

Henri Roy was recently appointed by the Quebec Government as director of the newly-organized School of Forest Rangers, and is in every way well qualified for the position. He was born in Quebec City in 1889 and received his education at the Quebec Seminary from which he was graduated in Arts in 1909. In the same year Mr. Roy entered the Forest Engineering School of Laval University and with distinction took the degree of Forest Engineer in 1912. From then until 1918 he was given charge of important forest explorations in different parts of the province, and five years ago entered the employ of the Belgo-Canadian Pulp & Paper Co., of Shawinigan Falls, Que., as chief engineer of the Forestry Branch, which position

he held until recently, when he resigned in order to devote his entire time to his new position with the Provincial Government. Mr. Roy is a young man who did not hesitate to devote years of his early life for the benefit of the province and country in the undertaking of the arduous task of the preservation and re-timbering of the forest wealth which is being rapidly depleted. He is an ardent advocate of reforestation and perpetuation of the natural assets of his native province.

## Lumbermen Join in Welcome to Sir Henry

Sir Henry Thornton, head of the Canadian National Railways and C. A. Hayes, head of the Canadian Express Co., along with a number of leading officials, visited the Grimsby fruit district on May 19th. The distinguished party, which was composed of about thirty, was tendered a banquet by the Chamber of Commerce at the "Grimsby Inn." The reception accorded the transportation magnates was a cordial one. Bert Fonger, of Grimsby, who is a well-known lumberman, was chairman of the Reception Committee, and looked after his part well.

A tour was made of the whole Niagara fruit district. Sir Henry Thornton was driven around for several hours through the fertile fields, with all the blossoms in full bloom and nature looking her best, by A. E. Clark, of Toronto, former president of the Canadian Lumbermen's Association and chairman of the Transportation Committee of the C.L.A. Sir Henry also spent a few hours with Mr. Clark at the latter's summer home at Grimsby Beach, along with Mayor Farrell, of Grimsby, and others. The party were also entertained at the clubhouse of the Deer Park and Country Club.

## Perth County Sawmill Goes up in Smoke

A sawmill in North Easthope township, located near Shakespeare, Perth County, Ont., some seven miles from Stratford, Ont., was destroyed by fire recently. The loss was about \$7000, and there is an insurance coverage of \$5000. The mill was owned by McFadden Bros., of the Manufacturers' Lumber Co., Stratford, and had not been in operation for the past year or two. The flames gained considerable headway before being discovered, and as there was practically no means to combat the blaze the entire plant went up in smoke.

About five years ago the Manufacturers' Lumber Co. purchased a mill at Clinton and removed the equipment to North Easthope township where about a million and a half feet of lumber was cut each season. The mill was a two-storey one, with a 100 h.p. engine and boiler and equipped with a circular saw edger, butting saw and slab saw, and had a capacity of from 15,000 to 20,000 feet a day.

A negro tramp had been seen loitering around the plant for a day or two and may have accidentally set fire to the place.

## The Pembroke Shook Mills are Busy

The Dominion Cannery, Limited, a new organization which has a capitalization of about \$10,000,000, recently absorbed 35 independent plants. It is understood that the new company which has taken over the Dominion Cannery and subsidiary companies, includes in

the transfer the Pembroke Shook Mills, Limited, of which J. T. Stuart is the general-manager.

It is stated that the new arrangement or amalgamation will be of great benefit in that it will mean cheaper packing of fruits and vegetables. Operating costs will also be considerably reduced under the new plan and the trade, and ultimately the consumer, will reap the benefit. For instance, one box factory will be able to supply the needs of all the factories.

Under the new arrangement it is not known whether there will be any change in the management of the Pembroke Shook Mills, but from present indications it looks as if the company will have a very busy season in the general shook business, although with the advance in the price of culls, it is declared shooks are selling too low.

## Loggers Want Plated Silverware and Then Some

Shower baths, laundry, plated silverware, china dishes, aluminium utensils, electric lights, eight hours a day and many other requests in connection with camp life and equipment were set forth recently in "the demands" made by the Central Strike Committee, Cranbrook Branch I.W.W., Lumber Workers' Industrial Union, No. 20, of Cranbrook, B.C.

There are, perhaps, a few things which the men have overlooked in their requests, but not many, as a perusal of their petition to "the bosses" will show. It reads as follows:—

### WE HAVE HEADED ALL OUR DEMANDS WITH THE FOLLOWING:

"The unconditional release of all class-war prisoners in the U.S.A." We have done this for two reasons—first, because we wish to protest against the barbaric actions of the U.S. Government in persisting in the holding in jail of working men and women for voicing their honest opinions. Secondly, because a lot of the lumber outfits in this district are operated by American capital and we wish to bring pressure to bear upon everything American until these men and women are released. It was American capital that put them in jail, and they are the logical ones to take action on.

### BELOW ARE THE WORKING DEMANDS OF THE STRIKING LUMBER WORKERS:—

1. An eight-hour day, from camp to camp.
2. A minimum wage of four (\$4.00) dollars per day. Board not to exceed one (\$1.00) per day.
3. That all safety rules and appliances be observed.
4. That all bunk-houses be built of lumber and to accommodate not more than eight men to a bunk-house. These to be kept in a clean and sanitary condition at all times, with plenty of light and ventilation.
5. Single spring beds and mattresses, with sheets, pillow slips and blankets to be furnished free of charge. Sheets and pillow slips to be washed once a week and blankets to be washed once a month.
6. That shower-baths, drying-room and laundry be furnished in all camps, with plenty of hot water for the crew for bathing and washing at all times.
7. Sanitary cook-houses to be built, with dining-room apart from kitchen. Cooks to be furnished with sufficient help so that their hours of work shall not exceed eight hours per day. Clean and wholesome food to be furnished and all dishes to be of china or crockery ware. All cooking utensils to be of aluminum and cutlery to be of plated silverware.
8. All barns to be at least 100 yards from the nearest dwelling-place or kitchen and lavatories to be at least 150 feet from the nearest dwelling place or kitchen, and these to be kept sanitary at all times.
9. All bunk-houses to be equipped with electric lights, five lights to a bunk-house—one to be in front of each bunk-house and light to be left burning in lavatories all night.
10. That a suitable place be provided in each camp for the accommodation of anyone sick or hurt. Also that a competent first-aid man be kept in each camp and in case of anyone sick or hurt that a doctor be furnished to attend at once.
11. The abolition of the piece or bonus system of working.
12. Sunday work and overtime to be paid at the rate of time and one half and that no Sunday work or overtime be done, except when absolutely necessary.
13. No discrimination against members of the I.W.W. and no interference with our mail or meetings.
14. A semi-monthly pay day, by cash or negotiable bank cheque.
15. Where the crew eats dinner on the works, a suitable building, equipped with tables, benches and stove shall be provided.

# *What Quebec Has to Say on Pulpwood Embargo*

## *Varied Opinions Expressed Regarding Proposed Restriction of Export from Private Lands — Some Interested Parties are Remaining Silent on the Situation*

The statement made by the federal Finance Minister, Hon. W. S. Fielding, in his Budget speech, regarding the appointment of a committee to consider the prohibition of the export of pulpwood, is viewed from various angles by the lumber and paper mill operators and the Provincial Government Departments interested in Quebec. The pulp and paper mill interests applaud the statement made by the federal Finance Minister, and say the measure, if adopted, will embargo the export of over 1,000,000 cords of pulpwood annually sold and transported from the province of Quebec to the American mills, which should be husbanded for home industry, and, at the same time, would greatly contribute to the protection of the wood resources of the province.

The limit holders, not directly interested in the manufacture of pulp and paper, maintain a different opinion. They contend that, should the federal government pass a law to prohibit the export of pulpwood to the United States, that it would not only be an act of discrimination against the forest freeholders, but the new settlers who depend on the sale for a living of the wood they cut in the clearing of their lots for agricultural purposes. The prohibition would, in fact, strike the farmers in general who have wood lands and each year cut a certain quantity of pulpwood for shipment to the United States.

Should the federal government pass a law of prohibition, it would mean that the big paper mill operating interests with limits of their own, would have absolute control of the pulpwood situation and the prices to be paid to the new settlers and farmers for their wood. Thus, in fact, the freeholders, farmers and new settlers would be completely at the mercy of the big mill interests, and the stoppage of the American mills competition would so reduce the price of pulpwood made by the farmers, that it would not be worth their while to cut and prepare the wood for the Canadian market.

The mill operators and large timber firms of Quebec, with their limits, declined to be quoted in giving their opinion in regard to the proposed prohibition on the ground that they were interested parties pro and con in keeping with their respective interests.

### **Provincial Government Views**

The Quebec correspondent of the "Canada Lumberman" with a view to learn the opinion of the three departments likely to be interested in the prohibition proposal, proceeded to the government buildings to interview the ministers. The Prime Minister, Hon. L. A. Tahchereau, and Hon. Mr. Perreault, Minister of Colonization, being absent from the city on a holiday, the head officials of their respective departments were conferred with, who gave expression to the opinion which may be accepted as being entertained by the ministers.

The Minister of Agriculture, Hon. J. E. Caron, was, however, found in his office. In the course of an interview, he said that he was convinced, if the prohibition of the export of pulpwood from the province of Quebec became law, that it would be a good thing for the farmers. Mr. Caron said the legislation of such a law entirely rested with the federal government, and the provinces had no legal status to interfere. He pointed out that the province of Quebec had full control of its crown timber land resources, and, during the Sir Lomer Gouin administration, had passed a law prohibiting the export of all wood from the government-owned lands, which was still in force. "But," said Mr. Caron, "we have no jurisdiction over the freehold forest properties. The proprietors, under existing circumstances, can dispose of their wood to whom they please, whether by export to the United States or not, which would, of course, undergo a change if the Federal Government passed a law to prohibit the export of pulpwood. Of course, such a law of prohibition would restrict the advantages the farmers now enjoy by American competition to dispose of their wood. The prices would be materially reduced as the million cords of pulpwood now sold to the American mills would be prohibited from exportation and would have to be sold to home purchasers in the province or the Canadian market. I am of the opinion that this would, in the end, be a good thing for the Quebec farmers. The paper mill operators have their own pulpwood limits, and the farmers, deprived of the American market, would not be anxious to cut down their wood lots. I give expression to this viewpoint with the knowledge that the Quebec farmers, tempted by the big prices offered for their wood through American competition, in many cases have either sold out their wood lands for cutting or cut down the same and disposed of it for export to the American mills.

"The result is that the Quebec farmers in many cases have no wood lots to draw on for their own needs, such as construction and the building of fences, and, as a consequence, have to buy these necessities. That is the reason why I hold the opinion that the adoption of a law of prohibition is likely to turn out a good thing for the Quebec farmers with wood lots. However, the Quebec government have not as yet given official consideration to the question as proposed in the statement made by Hon. Mr. Fielding, in the delivery of his Budget Speech. We await the move to be made by the Federal Government respecting the matter."

### **Should Have Wood to Draw From**

The Deputy Minister of the Department of Colonization, speaking in the absence of the Minister of this department, Hon. Mr. Perreault, did not see how the proposed law of prohibition of the export of pulpwood would vitally affect new colonists. He explained that when a new settler was given a lot of land for colonization, the land when given carried with it certain conditions until in the end letters patent were given the settler which constituted them as freeholders and at liberty to do as they judged best with their acquired property. In the first place, it was specifically stipulated in these conditions that the new settlers were to clear at least five acres of their land per season, and during this time of clearance or until they received their letters patent, they were prohibited from exporting their wood to the United States. The object of these restrictions was to protect Quebec industries and the new settlers to sell their wood production outside the province of Quebec in compliance with the conditions attached to their holdings until they had complied with all regulations and under letters patent came into full possession as freeholders. Therefore, it will be seen that should the law of prohibition of pulpwood as proposed by the federal Finance Minister, become effective, it will not affect the new Quebec colonists who are already prohibited from exporting the clearance cut until they become freeholders.

The Quebec Lands and Forests Department is evidently in favor of the Federal Government adopting an act to prohibit the export of pulpwood from the province of Quebec. In order that the farmers and large proprietors of free holdings should be protected, it is suggested that, in the event of such a law of prohibition being enacted, a clause should be inserted in the federal act to prevent these interests, to the effect that the government would have the big paper mill interests agree to maintain a certain conservative price on all pulpwood bought by Canadian mills from the farmers and freeholders.

### **Forests Department Favor Move**

In the absence of the Minister, Hon. H. Mercier, and G. C. Piche, superintendent, A. Bedard, assistant superintendent of the forests branch of the department, was seen and interviewed in regard to the proposed prohibition of export of pulpwood to the United States. Mr. Bedard, who is an expert in forestry and familiar with every phase of the forestry resources of Quebec, said:—"Besides the enactment of special laws for the protection of forests against fire and intensive exploitation, and for their proper silvicultural treatment, there should be a law prohibiting the exportation of our forest products.

Amongst the forest industries which are making the prosperity of Canada, the pulp and paper industry is, certainly, one of the most important, thanks to the considerable capital invested and the amount of labor engaged in its products, which can only be maintained by protection. The law of protection is specially desirable inasmuch as in many sections of Canada accessible resources are on the verge of exhaustion; through excessive exploitation, depredation and cryptogamic diseases, insects and fire propagation. The manufacturers of pulp, who are drawing their supply from these depleted forests, will in the near future be obligated to buy timber berths located far distant from their mills, thereby considerably increasing the cost of production of which they manufacture. They could buy at reasonable prices the pulpwood a little over 1,650,000 cords, which is cut on private lands for exportation to the United States.

These forest products, by being kept in Canada, would not only benefit the pulp and paper industry but also the lumber industry. A great part of it, in fact, could be put to better use owing to its size, by being converted into lumber. The private forest holders have been induced to convert trees of all sizes into pulpwood in

order to profit by the high prices offered for pulpwood by the American purchasers. Moreover, this timber being protected and accessible to the pulp and lumber, manufacturers could restrain their cutting operations, giving the forester a chance to reconstruct itself. Such a policy would determine many American manufacturers of pulp to emulate the example set before them by other manufacturers to come over to Canada and establish their mills in the north sections of the provinces of Ontario and Quebec, near the untouched forest and water powers which would open up and give employment to labor and establish new industrial centres, in places where hydraulic energy and forest supply could be had with great facilities. This would contribute to the general development of such parts of the country which up to the present have been left in their virgin state unexploited. It would mean the building of new railroad lines, roads and highways, new industrial centres where agricultural interests could find markets, and would retain the surplus of rural population which for years past have been attracted towards American cities.

"A prohibition legislature, such as is suggested by the federal Minister of Finance," said Mr. Bedard, "would benefit the labor interests of Canada, protect her forests and greatly help labor. The conversion into pulpwood of over 1,650,000 cords, annually exported, would benefit Canada to the extent of nearly \$60,000,000 in money retained and circulated in this country, besides helping to develop the country, labor and the rural population. Such a policy would contribute to increase the value of the forest properties now under lease.

"It is an introconvertible fact, since the establishment of the pulp and paper industry, it has been customary in the various provinces for settlers to take up land for no other purpose than what I call 'farming pulpwood.' Those pseudo settlers have, under their pretences, contributed to greatly reduce the area of birth and have been a standing menace by their improper methods, and carelessness for forest fires. Prohibitive legislation of export would put an end to these conditions, and the timber from the free lands would cease to have the plus value for which export has been responsible. The pseudo settlers would no more find encouragement to carry on their improper and disastrous enterprise. The complicated problem of colonization would be solved and only lands fit for agriculture would be in demand.

### Police Quell Insurrection in Timber Camp

Unusual circumstances featured a recent strike in one of the timber camps operated by C. Greer in the district of Fort William, Ont.

About 35 Finlanders had been employed in the camp most of the season, the wages being \$3 per day. The men struck and asked for an increase to \$3.50 per day. The management yielded as the camp was about to close for the season and all that remained was to clean up and get the cut wood out. After having won their wage increase the men still refused to work. Wishing to finish the work the management employed substitutes, who were chased out of camp by the strikers. An appeal to the provincial police officials resulted in the despatch of Sergt. Creasey and Constable Ingram to the scene of the disorder. They went out and without making an arrest ejected the strikers from the camp and restored direction of it to the lawful management and the men who were willing to work. Inspector Lougheed said that the Finlanders were radical socialists.

### Border Cities Dealers Getting on Nicely

The Border Cities Retail Lumbermen's Association which was organized some time ago, is holding regular meetings at Windsor, Ont., and making good progress. Everything is as satisfactory as can be expected and the code of ethics, which was recently submitted, was adopted. The dealers are recognizing it and the new code is having a salutary effect.

Building is quite active in the Border Cities and there is every indication towards a continuance of the same for the balance of the season, according to J. C. Scofield, Ex-President of the Ontario Retail Lumber Dealers' Association, providing the bricklayers' and plasterers' demands for wages are not too excessive. Building in Detroit, he says, is slaking off at a wonderful pace and consequently is having its effect on the men in Windsor,—that is, it is making them more reasonable in their demands.

### New Lumber Concern Opens in Peterboro

Alex. Dick, who was for several years manager of the Alfred McDonald Lumber Co., Peterboro, has formed the Dick-Carew Lumber Co., Limited, with headquarters in Peterboro. The author-

ized capital stock is \$50,000. The members, besides Mr. Dick, are Frank J. Carew, Lindsay; J. W. Meyers, president, Peterboro Cereal Co., Peterboro; George W. Hatton, County Crown Attorney, Peterboro, and Dr. Graham McDougall, Peterboro. The company has secured premises on Bethune St., between Murray and McDonnell,

Alex. Dick, Peterboro, Ont.

and will have an up-to-date woodworking plant as well as the facilities for manufacturing sash and doors, boxes, hardwood flooring, etc. The members of the firm are widely known to the trade and expect to have the business running full blast early this month.

### New Pulp Mill Proposed for East

Word received from St. John, N.B., is to the effect that as a result of the proposals for the development of the Hydro-Electric power at Grand Falls and elsewhere in New Brunswick, French interests are investigating the situation with a view to establishing a large pulp mill in Eastern Canada. Senator N. Jones, on behalf of a representative of the Petit Journal of Paris, has been in conference with Dr. E. A. Smith, chairman of the Power Commission, and C. O. Foss, chief engineer. The newspaper is desirous of establishing a pulp mill and exporting the product to France, where it would be converted into paper. At present the newspaper imports pulp from the Scandinavian countries and converts it into paper at a big plant in Rouen, France. It is estimated that the mill, if built, would require about 8,500 horse power for its operations. The commission will take the question up with the provincial Government.

### Practical Talks on Retail Deliveries

The "Canada Lumberman" will publish, starting with the next issue, a series of interesting and instructive articles on the delivery problem for the lumber retailer. These will be suitably illustrated and will convey much practical information which will be of use and help to the average yardman whose delivery service is causing him considerable anxiety. He is often faced with the problem—"Will it pay me to buy a truck to take care of my haulage?"

The articles will outline the method of delivering lumber from retail yards other than by horse and waggon, and while not desiring to uphold any one method as more advantageous than another, it is hoped that the contributions will prove of benefit to anyone thinking of adding motor or trailer equipment to his service for the first time or as an extra unit in his delivery equipment.

The first article will be on "truck delivery," the second on "truck and trailer" and the third on "tractor and trailer," while subsequent articles will deal with the recapitulation of methods of systems and comparative operating costs.

The transportation problem is one of great moment at the present time and this feature in the succeeding issues of the "Canada Lumberman" will be awaited with interest.

# What is Going On in the Great Lumber Arena

Pioneer Builders, Limited, Fort Frances, Ont., was recently incorporated.

Goderich Summer Homes, Limited, Goderich, Ont., is a new organization.

Frank Rounds, of Welland, Ont., has sold his lumber business to Robt. W. Rogers.

Rogers Lumber Yard, Limited, Moose Jaw, Sask., has reduced its capital from \$2,000,000 to \$1,000,000.

Fire recently destroyed the sash and factory of W. Lafrance at St. Eugene, P.Q. No insurance was carried.

Lumber (Mrs. Yards, Limited, Plenty, Sask., were recently sold to the Beaver Lumber Co., Limited, also at Plenty.

Edwin W. Fisher, president of the John Fisher & Sons, Limited, paper manufacturers of Dundas, Ont., died recently.

John G. Morton, head of the firm of the J. G. Morton & Sons, lumber merchants of Milton, N.S., passed away recently.

F. Stearns, of F. H. Stearns & Co., and J. Church, of Church & Church, Montreal, have been on a business trip to Philadelphia.

The Montreal Retail Lumbermen's Association recently materially increased its membership, and now includes practically every important retailer in the city.

Geo. S. Kerr Co., Limited, Campbellton, N.B., was recently incorporated to take over the business of Geo. S. Kerr and to deal in all kinds of forest products. Capital \$99,000.

A committee of the Montreal Wholesale Lumber Dealers' Association is considering the question of grading rules, and has made some progress towards drawing up a code.

All the British Government stocks of lumber in this country, having been sold, the offices of the Timber Disposal Department of the Board of Trade, England, in Montreal, have been closed.

A meeting of the Board of Directors of the Canadian Lumbermen's Association will be held at the Mount Royal Hotel, Montreal, on June 14th, when a number of important matters will come up for consideration.

Canadian Woodlands, Limited, Ottawa, is a new organization recently formed to manufacture lumber and pulpwood. Capital \$50,000. Two of the incorporators are F. R. Long and M. H. McKaw, both of Ottawa.

Among the new industries which recently located in Cooksville, Ont., are the woodworking plant and sash and door factory of John Harper & Sons, of Toronto. Mr. Harper has just built an attractive new house in the village.

A. H. Kendall, who for many years was master mechanic of the Quebec District Division of the Canadian Pacific Railway, has been appointed manager of the Chicoutimi Pulp Co., the Saguenay Light & Power Co. and the Saguenay Railway Co.

The luncheons of the Montreal Wholesale Lumber Dealers' Association are now held at the Mount Royal Hotel every Wednesday at 12.30 advanced time. The directors will welcome the presence of any lumberman from outside points.

Japan has become a heavy buyer of British Columbia lumber. The province exported 72,000,000 feet of timber to the Nipponese Empire in 1922, an increase of 20,000,000 feet over the previous year, according to the Department of Mines and Forests.

The Lake Simcoe Lumber & Fuel Company, Limited, Sutton West, Ont., is a new organization to conduct a general builders' supply business. Capital \$10,000. J. Pearman and J. Sibbald, lumberman, both of Georgina township are two of the incorporators.

The many friends of T. E. Rathbone, of George Rathbone, Limited, secretary of the Toronto District of the Ontario Retail Lumbermen's Association, will extend sympathy to him in the recent loss of the sight in his right eye, which was caused by the bursting of a blood vessel.

H. L. Hebard has been appointed chief inspector for the National Hardwood Lumber Association, of Montreal, and has entered upon his new duties. Mr. Hebard was formerly connected with the inspection staff at Toronto and has many friends in the trade. His assistant in Montreal is R. L. Orr.

Ashley R. Riches died on May 19 at 138 Lake Front, Toronto. He was for several years manager of the S. C. Kanady Lumber Co.,

wholesale lumber merchants, Toronto, who did a large trade until their retirement from business some years ago. Mr. Riches was well known to many of the older lumbermen of Toronto.

The Hoge Company's lumber camp ran its first car load of logs recently over their line and unloaded them at the head of the inlet at Port Moody, B.C. Four million feet of timber have been felled, two miles of railway constructed and two substantial bridges built since March 1, when the first camp was formed. A force of 60 men are employed.

The Anglo-Newfoundland Development Co., in maturing their plans for new developments in connection with pulp and paper manufacturing in this country, have acquired the property and plant of the Terra Nova Sulphite Co. at Anglo Brook, Cloverton, Nfld. This concern was started years ago by Messrs. Blackstad and Storm for the purpose of making pulp and paper.

At the annual meeting of Price Bros. & Co. which was held recently at the head office in Quebec, reports for the past year, which were of a satisfactory nature, were received and various routine matters were taken up. Sir William Price was re-elected president for the coming year and George H. Thomson and J. M. McCarthy vice-president. H. E. Price is again secretary-treasurer.

The many friends of Thomas H. Hancock, who is a widely-known retail lumber dealer in Toronto, will sympathize with him in the loss of his father, Thomas Hancock, who passed away on May 20. The late Mr. Hancock was a well-known builder and architect and several years ago was connected with the lumber business. He was 78 years of age and resided at 836 Dovercourt Road, Toronto.

Ninety-five per cent of the fires which destroyed British Columbia forests last year were caused by carelessness, according to Major C. Cowan, of the forest branch. Forest fires cost the province about \$23,000,000 in timber destroyed, Major Cowan stated. One-third of the total commercial timber cut was burned. Of the 2,000,000,000 feet of timber cut, 700,000,000 was destroyed by fire. The cost of fighting fires last year was \$750,000.

The Whalen Pulp & Paper Co. plans to take out 20,000,000 feet of logs, employing from 250 to 300 men in the vicinity of Thurston Harbor, B.C. The T. A. Kelley Co. is getting out 14,000,000 feet for the Powell River pulp mill and for export. These operations and other smaller ones are all on the Queen Charlotte Islands, but there are other logging operations along the coast and on some of the islands, as well as at a number of interior points along the line of the Canadian National railway.

The Hamilton Cove Pulp and Paper Company, Quebec, P.Q., which was granted provincial letters patent recently, and has its head office here, will float an issue of \$500,000 6½ per cent bonds, it was learned lately. This company will exploit the Mille Vaches Seigneurie timber limits on the north shore. It is understood that the St. Regis Paper Company will take half of the total of the bond issue, having a ten year contract for purchase of the production of the newly organized company. The timber limits of the Hamilton Cove Company are now being inspected on behalf of Mr. Sweezy, the Montreal forestry expert.

Thousands of pulpwood logs floated loosely down the St. Lawrence River recently, as the result of the breaking of a boom that was being towed down the river by the Vera T. The boom was being taken to the Grand Trunk wharf in Levis for shipment. While it was being manoeuvred to the wharf the boom struck the end of the wharf. A coincidence in this connection is that fifty years ago on the same date a boom was broken up by a storm on the river, over one hundred thousand logs being set free in the stream. The loss from the recent break is said to be fairly considerable.

W. H. Harris, president of the Frank H. Harris Lumber Co., who returned some time ago from an extended business trip to Mississippi, recently purchased a block of nearly 9,000,000 feet of long leaf, rosemary and short leaf yellow pine. The timber stand is located in Rankin County five miles from Pelahatchie, Miss., on the Alabama & Vicburg Railway. The property was bought from Haney & Williamson of Hattiesburg. Arrangements are being made for putting in a mill and logging operations will start in the near future. The output of yellow pine on the newly acquired property of Mr. Harris, will be handled through the Frank H. Harris Lumber Co., Toronto, Ont.

# Budget of Briefs From the Busy East

An interesting announcement was made from the Department of Lands and Mines in Fredericton, recently, giving notice that the rate of stumpage on poplar was reduced by the Government from four dollars to three dollars. The payment of the 1923 bonus by lumbermen has been extended over two years, one half to be paid in August 1923, and the other half in 1924.

As a result of recent heavy rains in the Province of New Brunswick and conditions prevailing as a result of a backward spring, the Department of Lands and Mines extended the time limit for slash burning from May 10 to May 15 inclusive. This extension proved advantageous to many as it gave them an opportunity to dispose of their slash. Operators and loggers also benefited from this extension by giving them a chance to clean up brush from last season's operations occurring within three hundred feet of railway lines and in the vicinity of mills and camps.

The new regulation, which provides for registration is receiving the endorsement and hearty support of all directly connected with the forest industries. Many letters of approval have been received by the department since the first announcement of the operation of the scheme. One citizen, who has had over twenty years of forest fire fighting experience wrote: "I received a book of certificates and wish to congratulate the department in such commendable advanced legislation. The concise statement of regulations on the back of each certificate should be much to eliminate carelessness with camp fires, cigars and cigarettes."

It is interesting to note that a "no-forest-fire" record for April was established this year.

The big plant of the Pejeboscot Company at Bath, Great Salmon River Village, St. John County, is now in full operation, the company fortunately not being greatly handicapped by the recent freshet. This big corporation expects to ship at least 8,000 cords of pulpwood, and over 3,000,000 feet of manufactured lumber during the summer. W. D. Seeley and G. W. Wallace of the company expressed an opinion recently that conditions in the lumber and pulpwood business had so improved that it was time to resume full operations. They said that the company expects to get out 20,000 cords of pulpwood and 5,000,000 feet of lumber in the season 1923-24. The pulpwood cut will be divided equally between the Irish and Great Salmon Rivers and the lumber will be all cut on the Great Salmon River.

A new industry has started in Woodstock by S. C. Heckbert, who will manufacture toboggans, shoo-fly rockers, etc. Recently he received an order from T. Eaton Company, of Toronto, for 2,000 toboggans in addition to other lines. Stock is being secured as Mr. Heckbert was one of the heavy losers by the recent floods which swept away a large quantity of white ash.

Murray & Gregory's saw mill at Marble Cove, St. John, resumed sawing operations a few days ago. Employees had been holding out for an increase in wages and a ten per cent increase offered by the owners was accepted. Stetson, Cutler & Company's mill at Pokiok resumed operations on Saturday May 19. Other saw mills in the vicinity of St. John are expected to commence sawing in the near future.

Driving conditions have been fairly good in streams and on rivers in the Province of New Brunswick. The St. John Log Driving Company have completed salvaging logs on the St. John river, which broke away from the booms during the recent high freshet and flood. Two tugs and a fleet of motor boats, with houseboats for the men, were engaged in the operation. In some cases logs had been carried back on farm land. It was announced that about 2,000,000 feet of logs went adrift. The mouth of the Nashwaak river was sealed with booms during the recent freshet. A recent report from there said that over half a million feet of logs had already reached the booms for the Nashwaak Pulp & Paper Company and that driving conditions were favorable. Stanley Douglas & Company are also operating a drive on the Nashwaak waters.

R. J. Stewart, of Coles Island, a prominent lumber manufacturer, had a very narrow escape from drowning a few days ago. He attempted to cross a bridge and the structure, weakened by the freshet, collapsed. He was thrown into the river and had great difficulty reaching shore.

The Victoria mills of the Fraser Company, Ltd., resumed operations for the season a few days ago, cutting long lumber. The planing mill has been in operation for some time.

A plan is being considered to ask the government of the province to establish a game and fish reserve in the vicinity of

Musquash, on a track of land which was formerly the centre of a great lumbering industry. Fifteen permanent sawmills had at one time been in operation there, but at the present time the sawmill at St. George is the only one left. The proposition is to have this section of crown lands between St. John and the St. Croix river declared a reserve and maintained as an attraction to hunters and fishermen.

A judgment in favor of the Bathurst Lumber Co., Ltd. vs. the Workmen's Compensation Board was recently handed down by His Honor Judge Grimmer. The case was argued some time ago, the chief issue being whether or not the plaintiff company came within part one of the Act constituting the Board, or Part two, a decision concerning which would settle whether the company would be required to pay assessment for 1922. The court found that the company was not within part one of the act and that the assessment amounting to \$31,625 levied against the company by the defendant was improperly made and therefore illegal and void. It found, further, that the plaintiff company was not subject to or liable to any assessment for 1922.

The Bathurst Company's No. 1 mill resumed sawing operations on May 18. A large supply of logs was on hand in the booms and from all indications the mill will have a long and steady run. The Gloucester Lumber & Trading Company's mill at Bathurst was expected to start in the near future. Reports received were to the effect that the company's drives on the Little and Bass Rivers were doing well and as soon as they were reasonably near the booms orders were to start the mill.

According to a report received at the time of writing a serious forest fire had broken out in the woods about four miles back of the Narrows, Queens County, the first of the season. Four barns, a house, a number of out-buildings, hay and farm machinery were demolished by the flames which kept on its devastating course through the woods.

Late reports received from the upper St. John river say that the River Valley Lumber Company, with headquarters at Oromocto, is making good progress with their drives. The greater part of the lumber, which was carried over the Rusiagornish by recent floods, has been recovered. On the North Branch Lake where a flood carried out a driving dam at the mouth of the lake and endangered the safety of a drive to two and a half million feet, repairs have been completed and it is believed that the drive would be brought out safely. The mill at Oromocto has started operations.

## How Tractor Did Work of Twenty Horses

The Murray & Omanique Lumber Co., of Barry's Bay, Ont., who have had a Linn logging tractor in operation in one of their camps near Madawaska, say that the machine did a large amount of hauling over a 4¼ mile road. This was nearly all down steep grades which had to be sanded. There were two upgrades of about seven per cent over which the Linn hauled seven or eight sleighs and a load on itself, making a total of 320 green hemlock logs to the trip. The tractor made four trips by day and when the firm worked nights, made three more and averaged well over 2,000 hemlock logs every twenty-four hours or in seven round trips, including the hours of daylight and darkness.

Mr. John Omanique states that had they been prepared for the tractor in the first place,— that is, if they had possessed all No. 1 sleighs when they began the use of the machine, it would, no doubt, have done double the work.

"Even at this rate," he adds, "we saved a great deal more than if we had hauled with horses. It would take at least, twenty teams of horses to replace this machine on the road which we hauled over. We hope this information may be of some value to you, and thank you for your interest in our operation."

## Big Business Calls for New Quarters

Notice has recently been received of the removal of the Link-Belt Company's Pittsburgh branch office from their old quarters at 1501 Park Building to their new and more commodious offices at 335 Fifth Avenue. Mr. T. F. Webster, manager of the Pittsburgh office says that larger space and the more convenient location was imperative because of the extraordinary volume of business transacted during the past year and which promises to remain in full swing, at least, for the coming fiscal year.

### Breezy Paragraphs From Far and Near

The Winnipeg Roofing Co. with a capital stock of \$50,000 was recently granted a charter. This plant is being constructed at St. Boniface, Man., and, it is expected, will be operating toward the end of June. The Winnipeg Roofing Co. will start with a production of about 400 rolls of roofing paper daily. There is sufficient business offering from the prairies to keep the plant working the year round. F. R. Dowse, of St. Boniface, is president of the company; R. J. Swain, Mayor of St. Boniface, vice-president, and B. D. White, of Vancouver, manager.

Two timber berths were sold recently at public auction by the New Brunswick Crown Lands Department. Berth No. 27, located on Two Millbrook, branch of the Eel River, Northumberland County, containing two square miles, was sold at the upset price of \$20 per square mile to W. and R. Walsh, the applicants. Berth No. 28, applied for by W. and R. Walsh, was sold to the Fraser Companies, Limited, at \$21 per square mile. This berth contains three square miles and is located east of Bay du Vin River.

Eighteen hundred school children from the various city schools and Devon were the guests of the Canadian Forestry Association recently at Fredericton, N.B., when four picture shows were given in the interests of forest protection as an Empire Day feature. Each of the four was addressed by Robson Black, Ottawa, Secretary of the Canadian Forestry Association. He also addressed the students of the Provincial Normal School.

The James W. Sewall, timber-cruising house of Old Town, Maine and Washington, D.C., report great activity in their business. Mr. Sewall has crews engaged in work, not only in Maine but in Ontario, Quebec, Nova Scotia, Vermont and New Hampshire. So far this year his cruisers have reported on over a million acres of land, and have work laid out ahead for nearly a million acres more.

The Hage Timber Co. recently entertained all its employees at a banquet at Port Coquitlam, B.C., the occasion being in celebration of the mill breaking a record and the cut exceeding 140,000 feet in a day. S. Hage promised another celebration if the output at the end of the month totalled 2,000,000 feet. The mill is only operating "one side" at present and there are 1,000,000 feet in the water at Port Moody, the result of thirteen days' operation.

The three pulp mills of the Whalen Pulp & Paper Co., Vancouver, B.C., are operating nearly to capacity. The Japanese market for sulphite shows a marked improvement and the British Columbia lumber market is quite strong. On May 1st the Whalen Company redeemed \$197,000 of 6 per cent first mortgage serial bonds that had matured.

There is a good prospect of a pulp mill being erected in Northern Alberta. The Edmonton Board of Trade has received a communication from Senator W. A. Griesbach, asking where lime and sulphur may be secured. The information is desired in connection with the establishment of a pulp mill. There are splendid sources of pulpwood along the clear water of the Athabaska River.

R. M. Beckett and W. A. Home, of the late firm of Dobell, Beckett & Co., Quebec, Que., have to some extent retired to private life from the lumber arena. They have, however, associated themselves with the Howe Lumber Co., Limited, of Three Rivers, and have gone on the board as directors.

In 1920 there were cut, in Canadian forests, 4,024,826 cords of pulpwood. This wood, if piled four feet high and four feet wide, would reach in a continuous line over 6,000 miles, or the distance from Vancouver to Halifax and out over the Atlantic to Queens-town, Ireland.

A message was recently received by the provincial police at Cobalt, asking for the arrest of the agitators who were said to have caused a strike at the T. S. Woollings pulpwood camp. Fifty men were said to have walked out and two officers were requested.

Fast work was recently accomplished at the Westminster Paper Mills, of New Westminster, in connection with a carload of tissue paper being shipped by boat to Australia. The car was loaded and landed at the C.P.R. wharf, Vancouver, within eight hours.

The firemen of Chatham, Ont., were called out recently in the neighborhood of Ringold. A box car loaded with hardwood lumber consigned to London, had become ignited. The car was brought to Chatham and uncoupled and the flames quickly extinguished.

Pioneer Builders, Limited, Fort Frances, Ont., was recently granted a provincial charter to manufacture and deal in builders' supplies and boxes. Capital \$40,000.

The Emerald Lumber Co. are now operating their new mill at Aberdeen Road, Matsqui, B.C.

Kitchener Timber Co., Kitchener, B.C., are about to start work on an addition to their sawmill at a cost of \$12,000.

The Emerald Lumber Co. are now operating their new mill at Aberdeen Road, Matsqui, B.C.

The Patterson, Theal Lumber Co. is now operating its mill at Popkum, B. C. The plant has a capacity of 26,000 feet per day.

### Passing of Another Veteran Lumberman

The late Henry Pedwell, Thornbury, Ont.

Many friends in the lumber trade will regret to learn of the death of Henry Pedwell, of Thornbury, Ont., a veteran lumberman, who joined the silent majority on May 17. He was in his 74th year and had been ailing for the last four months. An attack of the 'flu in February last weakened his otherwise strong constitution, and this was followed by pleurisy and pneumonia, the effects of which he could not throw off.

Just a year ago the late Mr. Pedwell and his wife celebrated their golden wedding and were the recipients of cordial congratulations from a wide circle of friends. Mr. Pedwell is survived by his wife and nine children, five of whom are in the lumber line. They are Charlie, of Detroit; E. M.; A. E.; F. A.

and A. W., all of Toronto. The funeral, which took place at Thornbury on May 20, under Masonic auspices, was largely attended, evidencing the esteem in which Mr. Pedwell was held. Known all over for his geniality, kindness of heart, strong patriotism and sound integrity, "Harry" Pedwell, as he was familiarly called, had filled many leading positions. He was reeve of Thornbury village for several years, and in all his battles at the polls was never defeated but once. He was born in Wales in the district in which Lloyd George, former Premier of Great Britain, was brought up and in build and facial features resembled to a considerable degree the famous British statesman.

As a young man, Mr. Pedwell landed in America with only a dime in his pocket, but he soon secured a job, and after spending a few months across the border, came to Collingwood where he learned the trade of machinist blacksmith. He removed later to Thornbury, some fourteen miles away, and there engaged in the carriage business. Then one day he thought that he would like to get in the lumber arena and he exchanged his shop for a sawmill which he conducted for many years. He also owned sawmills at one time in Owen Sound and in Keppel, cutting up large quantities of hardwoods. He continued operating at Thornbury until the limits which he owned gave out and then the mill was dismantled. Mr. Pedwell, however, remained in the retail lumber line until the day of his death. He was one of the pioneers of the industry in Grey County.

Mr. Pedwell had always been a public-spirited citizen and gave liberally of his time and talent to the advancement of the community. This was evidenced in a striking way during the years of the war and the scarcity of coal. To the first man who enlisted with the 148th (Grey County Battalion) he gave a present of \$100, and to everyone who joined later he donated a \$5 gold piece. He also took an active part in the Victory Bond and recruiting campaigns, and in his passing a good and just man has gone to his reward.

### Big Pulp Mill for Newfoundland

The big pulp and paper project of Newfoundland is going ahead and the Premier, Sir Richard Squires, is losing no time in carrying out the proposition which was endorsed recently by the electors. The Newfoundland legislature will meet on June 6th to pass a bill, confirming the contract entered into between the government and the Armstrong-Whitworth Co., of London, for the building of the mill on the West Coast. The plant will turn out about 400 tons daily. Under the agreement the Newfoundland government will guarantee the principal and interest of \$6,000,000 for the paper enterprise, and a similar sum has been guaranteed by the British government. The money raised under the Newfoundland guarantee will be expended in construction, and that from British sources in the purchase of machinery and materials in England.

### Big Pulp Proposition for Ancient Colony

Newfoundland is now assured of a great \$25,000,000 pulp and paper industry. This the result of the recent elections in the ancient colony when Sir Richard Squires, the premier, was re-elected by a strong majority in the legislature.

The plans in connection with the big project are developing satisfactorily and the undertaking, which is known as the "Humber River Proposition," will have an output of 400 tons of pulp and paper daily. This will be one of the largest individual units on the continent. Operations on the plant have been under way in that 700 men have been employed for several weeks putting in a temporary dam and preparing a railway and canal site. Big British interests are behind the concern and the bonds are being granted by both the Newfoundland and British Governments. The backers of the scheme are the W. G. Armstrong-Whitworth Company of Newcastle-on-Tyne, England, whose Canadian interests were recently taken over by the Charles Walmsley Company, Limited. Most of the machinery will be brought out from England although Canadian contractors are looking to have a share in the work of building the mill and the accompanying dam is necessary.

In addition to being a gigantic pulp and paper proposition the development will be the most ambitious hydro-electric plant in Newfoundland. The mill, it is planned, will be operated by power from the Humber River which will necessitate a canal ten miles long. The canal will vary in width from about 100 feet to 200 feet and will cost about \$5,000,000. There will be a dam 75 feet high and 1,200 feet wide. The ultimate power capacity will be 250 h.p. of which only half will now be needed.

The whole development will involve an expenditure of \$25,000,000. The Newfoundland government, according to the plans of Premier Sir Richard Squires, will guarantee 20-year sinking fund bonds to the amount of \$9,000,000, while the British government will guarantee an additional £2,000,000 of 25-year bonds. The scheme has received the approval of the Trade Facilities Advisory Committee of the British Government who have recommended it to the British authorities for guarantee to that amount, providing the Newfoundland administration guarantees an equal amount and providing the machinery is bought in England. These arrangements, it is believed, will bar Canadian or American capital from participation in the plan. One gratifying feature of the situation is that, when the new industry is in operation, much will have been done to solve the railway problem of the Island. Increased business will, no doubt, result and help wipe out the deficit on the government-owned and operated lines.

### New Kraft Pulp Plant for North

The Department of Lands and Forests is calling for tenders on a block of timber in the vicinity of Elsas, Kapuskasing district, comprising about 1000 square miles. The area is being put up for sale at the request of the Continental Wood Products Limited, who will agree to erect a kraft mill at Elsas of 100 tons capacity. The contemplated agreement will also call for the subsequent erection of a 50 to 75-ton kraft paper mill.

The company are operating a sawmill and woodworking plant at Elsas, and have been buying wood from veterans and other settlers. The Continental Wood Products Co., who are affiliated with the Continental Paper Bag Co. of the United States, are desirous of possessing limits of their own and the 1000 square miles to be offered publicly is covered mostly with jack pine, there being less than a million cords of spruce on the property, according to government estimates. Jack pine is a very satisfactory wood for the production of kraft paper, and in the event of the Continental Wood Products Co. being successful in securing the area, which is situated in the watershed of the Trout and Chapeau Rivers in the district of Sudbury, an important contribution will be made to the industrial activities in the north country.

The time for receiving the tenders closes on June 22nd. Tenderers must state what they are prepared to pay per thousand feet, board measure, for the timber over and above the upset prices, in addition

to Crown dues. Red and white pine upset price, \$6.00 per M feet, b.m.; spruce, too large for pulpwood, \$5.00 per M feet, b.m.; jack pine \$2.50 per M feet, b.m. The Crown dues on pine, including jack pine, are \$2.50 per M feet, and on spruce \$2.00 per M feet. Each tenderer must deposit a marked cheque of \$50,000.00 with his bid which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out the conditions therein.

### Stumpage Rate Reduced on Poplar

The stumpage on poplar, which is cut extensively in some sections of New Brunswick for pulpwood, was reduced lately by order-in-council passed by the provincial authorities. The former rate was \$4.00 per M feet, and it has been reduced to \$3, which means a drop of from \$2 to \$1.50 per cord for pulpwood. The decrease was made as, owing to the rate which had been in existence, quantities of poplar were being allowed to die and rot in the southern section of the province, where it grows in large stands but is not long lived and does not become large in size. It was said that Queens, Sunbury and Charlotte counties were the districts principally affected.

Hon. C. W. Robinson, Minister of Lands and Mines, reported that it had been proposed to extend the period for slash burning by settlers from May 10th to May 20th as a result of the recent floods, but reports reaching the department indicated that the woods were already drying up in many districts and it was not believed safe to extend the date for slash burning beyond May 15th. This action by the department was, therefore, approved. The Minister also reported that the department's organization was complete for carrying on protection of the forests from fires in so far as possible.

The Government also approved proposals to extend over a period of two years the payment of the 1923 bonus due in connection with leases of Crown Lands. The amount involved is between \$400,000 and \$500,000 and would have been due in its entirety on August 1st next; under the arrangement adopted, fifty per cent of the amounts will be payable this year and the balance on August 1, 1924. The licensees contended that it would be a hardship under present conditions to have to make the entire payments this year.

### All Eyes Are on Canada's Resources

In comparison with American capital, a small amount of British money is invested in Canadian timber lands, and in the pulp and paper industries. Great Britain secures her main supply of pulp from Scandinavia, with a certain amount from Canada. Geographical considerations have much to do with the drawing of supplies from Scandinavia, in the same way as these affect the purchase by American mills of large amounts of pulpwood from this country. There are, however, indications that British publishers are taking a greater interest in the pulpwood resources of Canada and Newfoundland. The visit to Canada of a representative of Edward Lloyd, Limited, the owners of the largest newsprint mill in the world, is not without interest. He is here to look into the question of establishing a pulp mill, together with acquiring the necessary limits. At present the firm uses a considerable quantity of Canadian pulp, and presumably the idea is that it will be cheaper to manufacture the pulp than to buy the product of other mills.

There is also a report that the Anglo-Newfoundland Company, the subsidiary of the Northcliffe interests, have under consideration the acquiring of limits in the Gatineau district and constructing a pulp and paper mill there. This would, of course, supplement the large plant now existing in Newfoundland. British capital was recently solicited for investment in one of the pulp mills in the Province of Quebec, which is already under British control.

According to Mr. Dodge, the president of the International Paper Company, conditions are favourable to the expansion of the Canadian newsprint industry at the expense of many American mills, who, with depleted pulpwood supplies, are not in a position to compete with our mills. He protests against the admission of Canadian newsprint free of duty, and also against what he regards as the

injustice of prohibiting the export of pulpwood from Crown lands.

All this means a greater demand on Canadian pulpwood resources, and gives point to the argument of those who insist that we should not only prohibit the export of pulpwood, but should take more drastic steps to prevent fires and to ensure a continuous supply of pulpwood and lumber.

### Busy Pulpwood Operations at Amqui

The St. Lawrence Lumber Co. of Quebec, have recently added a Canadian barking drum to their rossing plant at St. Lawrence Siding (Amqui). The company intend to ross at that place all the pulpwood they are taking out from their operations at Salmon Lake, Causapscal, Metalik, Heppel, etc., and ross it in transit in the Metapedia Valley. The firm have succeeded in getting a reduction in their rates from the Canadian National Railways for rossing and reshipment of wood from Amqui, Que.

The company are also building a conveyor on their siding that will enable them to load 30 cars at the same time, and at another siding near the lake they can unload at one time 12 cars of wood to be rossed in transit. At Metalik Siding the company are organized to load cars with a water-slucie that crosses the Metapedia River where they can load very rapidly.

The St. Lawrence Lumber Co. are taking out 40,000 cords of pulpwood this year and will move the output principally by water to the other side of the line. American consumers, who have no large piles in reserve, may be short of wood before long, and this is the reason the St. Lawrence Lumber Co. have effected arrangements to ship wood by water so that they will be able to deliver it to the mills when wanted. The St. Lawrence Co. have already made contracts for over 10,000 cords of peeled pulpwood for next year's delivery, and report that wood will cost more than last season.

### Sir William Price Offers Big Prize

Sir William Price, of Price Bros., Limited, is offering a prize of \$1,000 for the best essay in a general competition in Canada on the subject of "Canada North of the Fifty-sixth Parallel of Latitude." The contest which is open to all resident Canadians other than university students, has been instituted as a stimulus to the collection and dissemination of practical information about what are, perhaps, erroneously called the "barren lands" of the far Canadian north.

It is hoped that the contest will promote an authoritative verdict on the practicability or impossibility of the settlement and economic exploitation of these Arctic and sub-Arctic regions. There is an old view that these areas are inhabitable. There is a new view, supported by facts of exploration and by the northern trend of civilization in the North Temperate zone, that the lands can support population and that they constitute a new field for Canadian expansion. A critical examination of these conflicting theories is desired. The competition will not close until October 20th, 1924.

### Belgo Company is Now Canadian Owned

The Belgo Paper Co., whose mills are at Shawinigan Falls, Que., is now entirely controlled by Canadian capital. The acquisition of this rapidly-growing industry by strong financial interests of the Dominion has been received with favor and is the outcome of negotiations which have been in progress for some time. It is understood that the transfer of the financial control will not affect the company's operating staff, continuity of executive direction being a settled policy of the interests now in control.

The Belgo Company is unique among Canadian newsprint companies, in that it owes its origin to the investment of Belgian capital, and up to the present time has been controlled by Belgian interests. The business of the company was founded in 1900. Operations were begun in 1902 with the manufacture of groundwood pulp, the first newsprint machine being installed in 1904, annual output for the year being only 7,500 tons. As a result of twenty-three years of conservative financial and operating management, the company has a record of steady growth and expansion. The timber lands consist of over 1,800 square miles on the St. Maurice River and tributaries.

### Will Sawgrass Replace Spruce Pulp?

Sawgrass from Florida may yet be a serious rival for the pulp forests of Canada. A resident of Jacksonville, Fla., sends an instructive account of the development of a large plant, costing one million dollars, making pulp and paper from the sawgrass of Lake Griffen. The sawgrass bears some resemblance to the rushes in Ontario

marshes, but is broader and coarser in fibre. Samples of the paper from sawgrass which were sent are coarse and soft, so that it does not appear from the reader's communication how far this raw material could be used. A resemblance to the old Egyptian papyri is noted, as the six-foot prongs of sawgrass are like the tall reeds of the papyrus plant.

"There are over one thousand lakes in Lake county, Florida, alone," says the writer, "and their shores are literally lined with plantations of this sawgrass. The supply is unlimited. The pulp can be made in one-tenth the time with one-tenth the labor and one-tenth the cost of spruce-wood pulp. It makes printing, writing, building, mapping, roofing, and an art paper; bags, boxes, cartons, etc. The plant is in full operation day and night. Thousands of visitors pass through it weekly. It seems to answer the question of years: Where will we get paper when spruce runs out?"

### Expansion of Great National Industry

The Canadian Pulp & Paper Association has compiled and issued a bulletin containing the most recent data relating to all pulp and paper mills in the Dominion. The bulletin gives particulars regarding the location of the mills, the officers, directors and personnel, capitalization, equipment, timber supply and production. The mills are classified according to provinces and also according to product. In addition figures are presented showing Canada's exports of pulp and paper and of pulpwood, together with total Canadian consumption of pulpwood and the imports of paper which reached nearly 8½ million dollars in the fiscal year of 1923. Besides these, a list of paper merchants in Canada is printed.

### The Periods of Greatest Fire Danger

In view of the approaching forest fire season, the District Inspector of Forest Reserves points out that the periods of greatest fire danger in Manitoba vary in different parts. In the south and south-west, during the period from the disappearance of the snow until the June rains, the dried up grass creates a considerable fire hazard as it does also after the autumn. In the north of the province, on the other hand, moss takes the place of the grass as ground cover. This moss does not dry out until about July and August, and this is the period when most of the fires start.

### Several New Pulp Projects Shaping Up

If all the construction plants that are mooted or projected in Ontario, Quebec and the West are carried into effect, the next few months will witness an unusual development in the building line. Scarcely a month passes without some new company being incorporated, and there appears to be ample capital behind most of the enterprises. One of the latest incorporations is the Hamilton Cove Pulpwood & Lumber Co., Limited, with headquarters in Québec. David Henry Pennington, lumber merchant, is one of those connected with the incorporation which was formed to carry on business in lumber, logs, pulpwood, paper and paper products of all kinds. The authorized capital stock is \$150,000. Another company, which will likely get under way is the Québec Pulp & Paper Co., which proposes erecting a groundwood mill at Sillery, near the ancient capital, with a capacity of 100 tons daily.

### Ontario's Premier Opposes Pulpwood Embargo

An agitation has been going on for a long time to prohibit the export of pulpwood from private lands or failing in this that a duty should be imposed upon wood shipped out of the Dominion. If such a measure were carried out, it would have to be enacted by the Federal Government at Ottawa who will, it is announced, appoint a commission to inquire into the question and get all the information that is possible to obtain before coming to a definite conclusion on the proposition.

Hon. E. C. Drury, Premier of Ontario, who is an ardent advocate of the conservation of Canadian resources and a strong upholder of a more progressive provincial forestry policy, stated recently, in a public address, that he did not favor any such drastic change as placing a restriction upon the pulpwood of settlers. If the latter were shut off from export to American buyers, it would, he said, be a serious blow to the settlement and progress of Northern Ontario. The pulpwood of the settler was practically all that he had to give him revenue, while he was clearing his land and carving out a farm. Premier Drury added that to bar settlers from selling pulpwood for export, would leave them at the mercy of the big operators.

# LUMBER TRADE CONDITIONS

## Quebec Exporters Speak on Outlook Overseas

The late opening of the season of navigation in the St. Lawrence route caused by the ice congestion of the straits of Cabot has greatly interfered with the shipment of lumber from the port of Quebec. Arrangements had been made by Quebec shippers to load vessels at this port during the second week of May by liners but, due to ice conditions, several steamers were diverted to winter ports which had the effect of upsetting all calculations. Under these conditions the Quebec exporters have been applying for new channels of export and up to the time of writing, had not received definite replies to their demands for cargo space. It is expected, however, that the month of June will witness large shipments of lumber from the port of Quebec to the United Kingdom market.

The recent changes in the European political situation are not viewed with any sense of alarm by the economic interests in Great Britain. These eventualities were anticipated, especially in the case of Russia, and the latest confidential reports received by the Quebec export firms from their European agencies in regard to the situation, make it plain that the British note to Russia was unavoidable and expected. Russia, according to these sources of information, will have to make a complete back-down, and if she does not, there will be no war for the reason that England will simply cut off all further diplomatic and trade relations, leaving the Soviets to stew in their own fat.

Col. R. M. Beckett, of the late firm of Dobell, Beckett & Co., who spent the winter abroad and arrived at Quebec on May 6th in company with Capt. J. F. Burstall, of the firm of John Burstall & Co., speaking of the political conditions abroad, said Great Britain was slowly but surely coming back to normal, and if it were not for the unsettled European conditions which included Germany's procrastination and continued equivocations, the economic situation of England would ere this have been greatly improved. The crux of the whole political difficulty, said Col. Beckett, is that Germany controls Russia and stiffens the attitude of the Turkish political circles. The only people well fed in Russia are the Soviet government entourage and the Red Army, which is officered by Germans. Nevertheless, both Russia and Germany are not considered formidable factors in their present weak and disorganized condition. It will, however, take some little time yet to clarify the present political horizon and, when the clouds roll by or when Germany realizes that the Allies must receive honest, concrete proposals will ensue for a settlement of the reparations, which are gradually looming up in the distance as a means of reaching an acceptable adjustment.

In regard to prospective business relations in England with Canada, it is learned from other sources, that the lumber trade in England is beginning to visualize the future with more confidence. With another Government housing scheme on the tapis, timber prices are rising, which is causing the English timber merchants to demand more money for their goods. It is feared that this may have the effect of accusations of profiteering and the cry that the English dealers are exploiting the needs of the country for their own benefit. This is likely to discourage private investment in construction. The British timber importers explain that far from obtaining excessive profits, they have in the past year been selling too cheaply, and, in the majority of cases, have put on a moderate profit, taking chances of being able to purchase again. They claim that they fought strenuously against the advancing tendency in exporting countries, and would have done better, had they been more enterprising in their contracts, while presuming that a big demand earlier in the season would have encouraged shippers and caused a premature rise in values.

It is pointed out that events of late have been working strongly in favor of higher prices for timber, no doubt due to the lock-out at the sawmills in Sweden for over two months of the cutting season, to reduce the output for the year 1923, and the rise of the value of the Finnish mark to reduce automatically the profits of the exporters. Furthermore, the prospects of a further appreciation in the currency will make the Finnish sellers more reluctant to continue placing their wood at Sterling prices which is likely to prove less remunerative. In the meantime, increased inquiries are of late reaching the British dealers in lumber, from France and Belgium to give the shippers an idea that business will be possible in these markets, notwithstanding the handicap of the exchange rates. It is thus argued that causes quite outside the control of English buyers, are at work in the advance of wood values.

This combination of circumstances will, without doubt, enhance the demand for Canadian wood and agents of the Canadian lumber interests in Europe are expecting to reap benefits which will be demonstrated in the midsummer and fall shipments from the port of Quebec.

It is pointed out that the quarrel on the Continent and dislocation of the foreign exchanges, made all English buyers nervous, and although they foresaw a better demand in Great Britain for wool goods, they hesitated to take advantage of the prospects. Consequently, instead of purchasing in a wholesale manner and, so obtaining their goods more cheaply, they were forced to buy in small quantities from time to time. They considered, under the then existing circumstances this was the safest course to adopt, and even now, when things are looking brighter and everybody more optimistic, the British importer is conducting his purchasing with caution.

The British wood importers these days are beginning to realize the big business being carried on by the Canadian lumber interests with the United States, and are amazed to learn that, in view of the situation, the spruce market for 1923, owing to the big demand both in Canada and the United States where higher prices are obtainable in comparison to those paid in the United Kingdom, is being sold up rapidly for consumption.

A circular issued by an English firm of importers gives a view of the situation from which the following is quoted:—"Owing to the principal shippers having decided to convert their logs into wood pulp in 1923, and owing also to the big demand both in Canada and U.S.A., where high prices are obtainable, the quantities of spruce for the English market will be about the smallest on record; in fact the leading shippers have now cleared the whole of their f.o.b. stocks and are requiring considerably higher prices for later shipment—in many cases, at least, as high or higher than we are able to quote you from our early contracts."

The foregoing circular when issued, was the cause of considerable interest in the British market and went to show that Canada could be independent of the United Kingdom.

## Halifax Conditions Point to Continued Good Trade

Present indications point to a continuation of the activity that has characterized the lumber industry in Nova Scotia since the beginning of the year. During the winter and early spring shipping was badly hampered by railway embargoes and weather conditions, but since the opening of navigation the movement of stock has been going on freely both by cargo and rail, to the United States market and liner shipments have been of fair volume to the British market.

Owing in the enormous volume of new building undertaken in the Eastern States during the early part of the year, there was a good demand for eastern spruce lumber and lath, and quotations rose steadily until the peak appeared to be reached about the first of May. With the passing of winter, transportation conditions improved greatly, and old orders, which in many cases had been held up for several weeks, began to arrive in such volume that the yards and sidings became badly congested, and American buyers did not exhibit the same interest in forward buying as had been the case earlier in the year. This congestion coupled with labor difficulties has produced a condition which has had a depressing effect on the market, and there is not likely to be any speculative buying until these matters have been straightened out.

Late reports show an alarming increase in building costs in the United States, and although the cost of lumber possibly shows the lowest ratio of increase, they sound a warning that may not safely be disregarded. While there may be little likelihood that construction already undertaken will be discontinued, it is a fact that building that had been in prospect is being deferred in the hopes that costs will be reduced later in the year. Laths which are the most susceptible to sudden fluctuation, have already declined considerably in price, although many well informed people expect to see them regain their former price in a short time, as much of the building under construction has not yet reached the stage where lath are used.

That the present year will see continued improvement in the British market, there is every reason to believe. Unemployment is steadily getting better, international complications are not so embarrassing to trade, exchanges are being stabilized, and industrial expansion is creating a market for our spruce, which is reflected

(Continued on page 61)

## ***“On Time” Delivery***

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

## Lumber Trade Conditions

(Continued from page 57)

in greater demand and consequently better prices. Freight rates are still admittedly too high, but competition from European timber producers does not appear so serious as in former years.

Recent inquiries from the West Indies have exposed the fact that there is practically no cured lumber available for that market. This is an unusual condition, as ordinarily many of the exporters engaged in that trade carry over pine and spruce suitable for that trade from the preceding year. Indications are that there will be a fair trade available during the year, and that as soon as the lumber is in shipping shape, a ready market will be found at satisfactory prices.

The demand locally for various kinds of lumber promised to be greatly in excess of any recent year. The cut on account of adverse weather conditions during the past winter will be considerably below normal, and there are those who forecast an actual scarcity of desirable specifications before the next cut is available.

Conditions have been very favorable for driving during the spring, and practically all the summer cuts are now in safe waters, and most mills have begun sawing.

### St. John Has Some Changes in Price and Demand

The market reports from St. John show some marked changes in prices since the last edition. Some of the changes may be attributed to the American market being easier, and the English market stronger.

2 x 3, 2 x 4, 3 x 4 spruce shows a falling off and is quoted at \$29.00. 2 x 3, 2 x 4 and 3 x 4 dressed on one edge is \$30.00. Sizes 2 x 6 and 2 x 7 are priced at \$30.00, while 2 x 10 and 3 x 9 are \$38.00. Merchantable spruce boards rough 1 x 3 and 4 x 5 remain at \$30.00, but 1 x 7 and up have advanced from \$40.00 to \$45.00.

There has been a falling off in the demand for laths and the gure has dropped to \$6.50. Quotations on all kinds of shingles have advanced. This is attributed to the fact that all of last year's manufacture has been disposed of and higher values prevail for the new cut.

Shipments to the United States market have become easier, which is said to be due to the retailers there buying heavily during the first of the year and in many cases being fully stocked. While the market is undoubtedly a trifle easier there are no signs of weakening. On the other hand reports indicate that the British demand has become stronger, thus offsetting the easing up of the United States situation.

From abnormal shipments of laths the situation has taken a turn and in Boston and the New England States the demand has fallen off. A recent settlement of the wage question in Boston has been responsible for steadying and stimulating the lumber market.

From recent reports received spruce logs were said to be selling at from \$22 to \$25 per thousand feet at Springhill. These prices, for what are known as bank logs, are said to be near the highest level ever reached on the river and are an indication of the prosperous condition in the lumber arena.

Transportation difficulties have figured quite prominently in the lumber situation here. The railroad service is still handicapped as a result of the recent torrential rains and subsequent floods, which caused considerable damage to the roadbeds and although temporary repairs have been made transportation of freight has slowed down.

Although the demand for shingles quite recently has been rather quiet the price remains firm and it seems assured that there will be a ready market for the new cut.

### Ottawa Reports Slowing up in Lumber Sales

The Ottawa lumber market, during the closing period of May, experienced a further decline, so far as the volume of sales, and new orders were concerned. Trading with the United States yards which began to fall off during the latter part of April, intensified, with the result that May business with the American yards could easily be classified as poor.

The drop in American demand, was attributed largely to threatened strikes in the building trades of the U. S.; the abnormally large wages now being paid to skilled labor; and the unexpected lifting of railroad embargoes which permitted Canadian shipments held up for a long time, to get to their destination, and so restock American yards.

What the real cause of the depression is, nobody seemed to know definitely. Several stated to the correspondent of the "Canada Lumberman" that they felt there was perhaps an even chance for

the slack-up in orders to blow over, and held out hopes that good business would renew itself about the latter part of June; or early in July. In holding this view, members of the trade also looked on the other side of the prospective market and saw where it could get considerably worse.

Notwithstanding the slackening of orders, prices remained firm. The getting of further American yard orders was the chief concern. Local companies continued to work on old orders and send out shipments delivering stock on orders placed months ago.

With the renewal of navigation, stocks of a standard size for the English market went forward from Ottawa district ports. Little change was noted in the volume of business or the stocks transported as compared with other years. Contrary to some expectations the drop in ocean freight rates which a year ago was 100 shillings per standard, did not result in increased business.

Most of the sawmills got under operation during the period, and high water conditions at the Chaudiere gave promise of a good supply of early season logs coming down from the headwaters. A survey of the operations of logging companies showed that the lateness of the spring had tied up the annual drive considerably.

Labor conditions with some of the logging companies were said to be poor so far as the spring drive is concerned. Reports were to the effect that many of the skilled hands had quit camp and had gone to the United States, with the prospect of securing higher wages, working as unskilled labor, under prospective better conditions.

"There are very few of the old men left for the drive. This year we are shorter, than ever, and we will have to commence our drive with practically an 80 per cent new crew made up largely of green river drivers," was the reluctant statement made by the woods manager of one of the largest lumber companies in the Ottawa Valley.

Conditions at the woodworking and factory end remained slow. The lateness of the approach of the summer season set new building back from three to four weeks, and consequently kept down the demand for factory products. Many projects, which were contemplated in March and April, have been postponed for another year, the owners taking the view that the cost of building materials, lumber especially, was excessive.

Labor conditions in woodworking plants and factories continued to remain satisfactory, though the heads of the plants did not make any decision respecting the demand for higher wages, which was some time ago presented to them by the members of the Woodworkers Union.

### Ontario Trade Slackens Somewhat in Orders

During the month of May conditions slowed down considerably in the lumber business and the number of inquiries were not as large. Buyers were adopting a more cautious attitude, the advance in prices ceased and the demand from the United States consuming centres fell off appreciably. In some respects this is welcomed as having a tendency to counteract the hitherto upward trend of prices, as if conditions had gone on as they have been for some weeks, there was every danger of a runaway market. One wholesale lumberman described the present situation as "a detour" and said the main road would be struck again in a comparatively short time and everything would proceed along safe and sane lines.

Dry stocks are scarce, both in hardwood and soft-wood, and at most shipping points the footage on hand is much less than at this season last year. Practically all sawmills are now operating and a scarcity of help is reported at some points, particularly in the way of sawyers, filers, edgermen, etc. A number of these have been attracted by the high wages paid for skilled men across the border. The situation has also not been improved any by reason of the large number of sawmills operating this season which were not in commission last summer. There is no denying that most plants have been very late in getting under way but it is expected that the cut will be heavier at the majority of points than last year owing to the fact that the supply of logs will be greater and more mills will run night and day, a condition which has been unknown in some lumber towns for many years.

Production is, however, the watchword just now and it is believed that 1923 is going to be one of steady demand and satisfactory prices in spite of the cross-currents in the way of demands of labor, alleged buyers' strike, speculation, sales tax increase and other perplexities. The lumbermen, however, are always willing to take a chance and are of the opinion that everything will round into satisfactory shape.

Building operations are going on progressively in Canada and there are very few serious labor troubles. Conditions are essentially sound and prospects good as the crops are promising. Buyers, however, refuse to be stampeded into heavy purchasing even although there has been a constant trend towards higher price levels. As one

## The Question of Provisions

for camp and boarding house is again coming to the fore, and many customers of long standing are getting in touch with us. Probably nothing else testifies to the quality of our service so clearly as the return, year after year, of many of the largest companies operating in Canada.

We offer the finest provisions at particularly attractive prices. Let us quote on **your** requirements.

**DUNLOP**

Belting, Hose, Packing and General Mechanical Rubber Products for Every Purpose

speaker recently put it, there appears to be a general feeling that commodity markets are arriving at the point where the public will commence to hesitate about acquiring those things that are not absolute necessities.

Owing to stiffer prices in certain grades of hardwoods, flooring recently took a jump from \$5 to \$15 per M. The advance did not apply to all grades but is regarded as a sort of evening-up process. Manufacturers report that the month of May was a very much busier one for flooring than April.

Large quantities of railway ties are being shipped to different points along the various roads and to the creosoting plants at Trenton, Sudbury and other places. The call for ties is a heavy one and contracts have been filled by the purchasing concerns in an expeditious manner.

There are two features in the lumber trade which have to be considered very thoroughly. They are factors which no one can exactly determine as all prophecies would fail if attempting to gauge results accurately. The new sales tax of six per cent, which will come into effect on January 1st, will add considerably to the ultimate price of forest products, being double the sales tax which is collected this year. Then again there is the advent of the new cut next month. Admittedly stocks in certain sizes and dimensions are now scarce, but how will quotations be affected when orders can be filled immediately from the producing centres?

Will enlarged stocks and higher prices, by reason of the sales tax, cause a halt in the upward trend of prices, requisitions and distribution? Any discussion on this line, while of a speculative character, is highly interesting as it is in the future the trade is concerned rather than the present. They know what is taking place now but the question arises what will transpire—say two or three months ahead?

Retailers generally are not doing the business this spring which they fully expected to do and are not buying very freely at the present time. This is attributed to the fact that speculative building is dropping off in the larger centres and the increased cost of construction is causing a number of "prospects" to hesitate.

A leading contractor stated the other day that a house which he could build and sell last year for \$10,000, was this spring, owing to the advance in labor, glass, hardware and other costs, commanding \$11,000 and the profit on the sale would not be as great proportionately. Another contractor stated that house-building was being overdone and construction had pretty nearly caught up with the demand. A wholesale lumberman blamed the millmen for asking too much for their season's cut and said that the figures were out of all proportion to the advance in the cost of production. There had, he added, been a lot of talk about a scarcity of dry lumber until it became a settled conviction in the mind of all that lumber was almost a vanished product and then advantage had been taken of the delusion to boost prices. He believed that the present temporary lull was a mighty good balance wheel and would serve to steady business during the remainder of the journey for 1923.

It is interesting to hear the varied opinions on the subject of lumber prices and demand, no two individuals taking exactly the same outlook. However, there are very few pessimists, and all speak with a quiet confidence and sound belief that everything will come out well in the end.

### Quebec Sawmills are Now in Full Swing

The Quebec lumber mills, which have sold practically all their stocks of manufactured lumber to local interests and to the United States market, are ready for operations on their 1923 cut, and by June 1st will be in full swing. Owing to the ease in the car situation during the latter part of April and May, the Quebec firms have been shipping daily the product sold during the last fall and winter to their American customers and the same applies to the export of pulpwood to the United States mills. In the meantime, the demand for manufactured lumber still continues from the United States and the Quebec firms have their books well filled with orders for deliveries during the summer.

The boom in the building trade in the United States in which there seems no let-up, is sending the prices of lumber up in the United States to abnormal figures. Building activity is also having the effect of attracting over the border a large exodus of experienced mechanics to the detriment of the Canadian trade. These abnormal conditions in the United States, with the consequent inflation in the price of lumber and other material, as well as in labor, are not expected to last. Economists, studying the situation, look for a reaction within the next few months which all interests concerned in Canada are preparing to meet.

The St. Pacome Lumber Co., of which W. Gerard Power is president, (and altogether a separate business entirely from the firm of W. & J. Sharples, Limited), is doing a thriving export business

with the United States. In connection with this company, Mr. Power is also the president of an American lumber importing company in the United States with head offices in the city of New York, managed by one of the latter members of the firm, R. E. Stocking. In addition to these interests and to meet the ever-increasing demand from the American markets, Mr. Power has promoted another lumber company, the Bridgewater Lumber Co., which has acquired a parcel of land at Cap Rouge in close vicinity to the Quebec bridge, on which a large lumber mill will be erected to saw and dress lumber for the American market. This new concern was incorporated by letters patent at the end of April, the machinery was ordered and the mill building is now in the course of erection.

The object in locating the Bridgewater Company's mill on the heights of Cap Rouge in close vicinity to the Quebec bridge, is to meet the emergencies of shipment. The logs will be brought in by the Intercolonial and Transcontinental Railways connecting with the base of supply, from the timber limits, where logging operations are carried on during the winter, and over the Quebec bridge right to the new mill. When the wood is sawn and dressed, it can be shipped west or over the bridge to connect with all American transportation arteries.

Associated with Mr. Power in this new enterprise are several young men reputed to be live-wire fellows, who have every prospect of meeting with success.

The building boom, which was inaugurated last year in the city and district of Quebec, still continues, and judging from the number and value of contracts awarded, the Quebec building trade is destined to have a busy season. The only drawback is the shortage of experienced tradesmen and skilled labor in general, a situation which the labor unions are likely to take advantage of to demand higher wages.

### How West Coast Business is Coming On

Speaking of West Coast conditions, a leading eastern representative of the B.C. mills stated that stability is the predominating note in the Pacific province market to-day. The upward movement of lumber prices has definitely come to a halt. There is, however, sufficient business on the books and enough new business in sight to warrant the market holding reasonably firm throughout the summer.

With several markets to draw on, the British Columbia lumber manufacturer is not losing any sleep about getting the business. His problem now is largely one of keeping down costs. Labor, which so largely determines the mill value of forest products, has lately been very restless and has demanded high wages; especially has this been the case of the Washington and Oregon mills where the I.W.W. flourishes.

Cargo business remains heavy. Atlantic Seaboard business has fallen off slightly, but this has been promptly made up by California buying very heavy quantities of West Coast stock. In the foreign countries Japan is the leading buyer. No particular market, however, can be picked out to indicate conditions with the West Coast mills, as their abnormal activity is largely concerned in keeping pace with the combined demand of all markets.

"We find many Ontario retailers afraid of the market. Business with the retail lumbermen in Eastern Canada has yet to improve considerably before it can be called good. This, together with the fact that there is always the odd tramp car selling at ruinous prices, has served to weaken confidence in the lumber market. The merchant, however, who expects lower prices within the near future, or possibly this summer, is likely to be disappointed, as the influences, which are effecting the market trend, are wide-spread and are not confined to any particular locality," he concluded.

### Montreal Lumber Trade is Proceeding Cautiously

In the Montreal market report of May 1st, it was suggested that the abnormally high building costs in the United States and the increasing demands of workmen might result in the abandonment of many building schemes in that country. This, it was pointed out, would adversely affect the Canadian lumber trade, the recent activity in which was principally due to orders from across the border.

Advices from New York state that a check has been made in building, that projects running into millions have been either abandoned or postponed, and there are likely to be further cancellations unless wages come down to a reasonable basis. Labour is receiving the highest wages on record, the ruling rates being \$14.00 to \$16.00 per day, with some sections receiving \$25.00 per day. Notwithstanding these exorbitant rates, there are threats of labour trouble by dissatisfied workmen.

A representative of a wholesale lumber firm who has just returned from a visit to the New England States, found considerable

industrial unrest there. With a shortage of skilled men and with a building boom in progress, men have been able to run up wages to an unprecedented height, while the general efficiency has decreased.

The result of the postponement of work has been, according to Montreal wholesalers, a falling off in orders for lumber. Trade is still good, but if workmen on the other side maintain their present attitude, we may anticipate a considerable decrease in the lumber business with U.S. customers and a cancellation of orders. Such a condition is bound to be reflected on prices.

Local retailers are still buying very cautiously. They, apparently, are of the opinion that prices will not hold, and they are not inclined to stock up at present values. They are selling a fair amount of lumber.

There is a good demand for lath, the market being firm.

In several parts of the province the drives are backward, owing to the late season at which the ice on the lakes broke up. This will add to the expense.

There is no let-up in building activity in Montreal—in fact reports from all parts of the province indicate that construction work is very brisk. During the first half of May the building permits in Montreal constituted a record for that period, totalling \$1,787,375, the majority of the buildings being dwelling houses. Wages are going up slightly but there are reports that labour for this class of work is in short supply due to the numbers emigrating to the States where excessive pay is being handed out.

A fair amount of lumber, mainly pine, is being exported from Montreal to the U.S. A substantial tonnage will be shipped in tramps from the lower ports. Part of this was purchased last fall for British account, including the cuts of the St. Maurice Paper Co. and the Wayagamack Company.

### How Liverpool Market is Keeping Up

Timber imports at Liverpool, Eng., were moderate and fair quantities going into consumption. During the past month stocks of leading varieties were light but sufficient for immediate requirements, according to the latest circular of Farnsworth & Jardine. The import season is now at hand. General inquiry has increased somewhat and the tone of the market has slightly improved, which is possibly due to the avoidance of the threatened stoppage in the building trade. Values are unchanged.

In regard to Canadian woods, so far as yellow (white) pine timber is concerned, the stocks are not excessive, but they appear sufficient for the quiet demand. Other interesting data is as follows.—A small parcel of first-class waney pine arrived from the Pacific Coast. Consumption was of a retail character with the result that stocks are not materially altered. On second-class waney pine there is no noticeable improvement in demand and present stocks are sufficient. There are very few inquiries for square pine (red).

So far as Canadian oak is concerned, consumption is disappointing and the holdings are ample for the present. The import of elm was about 1000 cubic feet, which went into consumption. Stocks are low and fresh square wood of large dimension is wanted. The arrivals of pine deals were moderate, and as fair quantities are passing into consumption the stocks have reduced to moderate dimensions. Prices are firm.

So far as Canadian spruce is concerned, a fairly steady demand existed, with the result that stocks are reduced and amount to about the same quantity as at this particular period last year. Values have appreciated.

There has been an import of New Brunswick and Nova Scotia spruce and pine deals to the Mersey, which includes the Manchester Canal, of 3,710 standards, and although the demand was steady, deliveries failed to keep pace and stocks amount to 8,920 standards compared with 4,650 standards at the end of April 1922.

Shipments by the liners met with a good reception at appreciating values throughout the month. Shippers' prices for f.o.w. delivery remain very firm. There was a limited quantity of ocean tonnage seeking engagement at steady rates. Toward the end of April exchange rates depreciated. There are practically no stocks of pine deals available at Liverpool at the present time.

An import of 20,000,000 cubic feet of birch logs came to Liverpool. Consumption totalled 11,000 cubic feet, being rather disappointing as stocks have been increased 36,000 cubic feet practically on a par with that held at the same time last year. Recent arrivals have been more difficult to dispose of. The import of birch planks was considerable, amounting to 66,000 cubic feet, of which 51,000 cubic feet moved into consumption.

Stocks are evenly distributed between Liverpool and Manchester aggregating 169,000 cubic feet, which appears quite sufficient to supply present requirements.

### Organized Revolt Against Builders Wages

There is in the United States a threatened revolt against high wages and high material cost in building construction. The first movement in this direction was the formation of a committee of 100 prominent bankers, architects, builders and property owners, to work with Secretary Hoover in an effort to stabilize building conditions.

The reports of what was said at the meeting, called to appoint this Committee, present vividly the impossible situation which is prevailing. One operator exhibited this picture of the impasse that is developing: In February bricklayers were being paid the regular scale of \$10 a day; in March an addition of \$1 bonus was demanded; in April, without notice, a demand made for \$12 a day; on the same day \$13 demanded, and half an hour later the demand increased to \$14 a day. Common labor at the same time made a demand for an increase from \$7 to \$8, and the hoisting engineer raised his price from \$10 a day to \$12 a day.

The reciter of these events concluded: "In 35 years' experience in the building trade, covering many millions of dollars' worth of work, I have never before met with such demands under such arbitrary conditions."

### Serious Setback to Metropolitan Building

A very serious set back in New York building activities is experienced in the decision of Justice Tierney of the Supreme Court that tax exemption legislation to relieve the house shortage is unconstitutional.

Two years ago the New York legislature granted tax exemption for a period of two years to those who would build homes or apartments. Attracted by the exemption, more than \$150,000,000 was invested in new building with applications for permits for an additional \$30,000,000 worth before the expiration of the exemption period on April 1st.

The proof that high taxes inevitably means high rents is indicated in the effect of Justice Tierney's decision that this tax exemption is unconstitutional. The proposed building projects have been cancelled and rents have been advanced almost unbelievably throughout the state.

### Enterprising Door Firm Has Grown Rapidly

In the Toronto Year Book, which has just been issued for 1923, an appreciative reference appears with respect to the Pannill Door Co., Limited, Toronto. The article states that the Pannill Door Co. was formed in 1919 and has met with signal success. The company are sash and door merchants and carry in stock large quantities of many different types of doors now used exclusively, not only in residences but in public buildings, such as hospitals, office buildings, hotels, schools, etc. The firm claim that they are able to give the contractor or builder doors out of stock with no further notice of time than is required to get the order out and delivered.

The firm also buy in very large quantities, in some cases as high as 10,000 doors at a time. It is also pointed out that during the building season the firm employ thirty people to look after their business. The staff of salesmen cover Toronto completely and are known personally to about ninety per cent of the builders because they are not only selling doors but, after a sale is effected, they continue to visit their customer checking up continually to see that satisfaction in the fullest measure has been delivered.

The Pannill Door Co. have a permanent exhibit of doors at their showrooms, 131 Front St. East, Toronto. Such woods as black walnut, mahogany, figured gumwood, birch, oak, chestnut, pine, fir and redwood are on display there at all times. The notice further says "This should appeal favorably to architects and builders, and the Pannill Door Co. have spared no expense to make it comfortable and attractive. First consideration has always been given to the builder towards saving him time and inconvenience."

### Quebec Provincial Lumber Receipts Decline

The fiscal year for the Province of Quebec will close on June 30. Already several departments are busily engaged in preparing their financial statements and expectations are that the \$1,000,000 surplus mark will again be exceeded this year. The conditions reigning in the lumber industry in the 1921-22 period will affect considerably the receipts of the Department of Lands and Forests which last year reached over \$4,000,000 and proved to be a record on any precedent period. This had meant an increase of over \$300,000 over the precedent, and of nearly \$1,000,000 on some of the previous years.

The financial report of that department is based on the last two years' returns and will show decrease of several hundred thousand dollars, it is expected, as a result of the conditions prevailing that year and the small quantity of timber cut.

# Edgings

The McNeil Lumber Co., Limited, has removed to 415 New Birks Building, Montreal.

The Victoria mill of the Fraser Companies, Limited, at Fredericton, N.B., began sawing recently.

J. P. Dupuis, president of the Montreal Retail Lumber Dealers' Association, was a visitor to Ottawa recently.

A. E. Gordon, of the A. E. Gordon Lumber Co., Toronto, left recently on an extended business trip to British Columbia.

James A. Connors of the Sewall timber cruising organization of Old Town, Maine, was in Nova Scotia recently on a short trip.

Fire destroyed the sawmill of Lausaphe Nault, Lavergne Station, Quebec, recently, causing a considerable loss to the owner.

J. J. Crowe & Co., Limited, Norquay, Sask., lumber dealers, recently sold their business to the Northern Lumber Co., Limited.

Archie Fraser, of Frasers, Limited, Edmundston, N.B., was a recent visitor to Montreal. He returned lately from a business trip to England.

The planing mill of the Haugh Lumber Co., Windsor, Ont., was destroyed by fire recently. The loss is about \$30,000 and partly covered by insurance.

Roy Campbell, of Toronto, who was for many years associated with the Canadian National Railways, has been appointed traffic manager for the A. E. Gordon Lumber Co., Toronto.

Fire recently destroyed the planing mill of Galt & Trick, 98 Athol St., Oshawa, Ont. The loss to equipment and material is estimated at \$5,000. The owners expect to rebuild shortly.

M. A. Grainger, of Vancouver, former managing-director of the Timber Industries Council of British Columbia, was in Toronto recently on his way to the Coast from a recent trip to England.

The Montreal Retail Lumbermen's Association has formed a sash and door manufacturers' section, which will look after their special interests. Weekly meetings are held at the Queen's Hotel, Montreal.

R. Armitage, of Ottawa, was drowned recently in the Thessalon River while engaged in a log drive. He was 29 years of age and the body was recovered about a mile and a half below the point where the accident occurred.

A new tissue paper mill is being planned by the Western Quebec Paper Mill, Limited, at St. Andrew's, Que. Among those interested are C. DeWolfe Reid, 211 McGill St., Montreal and R. W. Barclay, Western Quebec Power Co., 511 St. Catherine St. West, Montreal.

Paul Joubert has been elected chairman of the Quebec Division of the Canadian Manufacturers' Association, Messrs. H. C. Price and O. A. Gignac, of Quebec City, being elected on the Executive Committee. A. D. Huff, of the Riordon Company, is chairman of the Transportation Committee.

The Hamilton Cove Pulpwood and Lumber Co., Limited, Quebec, P.Q., is a new company recently formed to manufacture lumber, posts, shingles, pulpwood and other similar products. Capital \$150,000. D. H. Pennington and L. S. St. Laurent, both of Quebec City, are two of the incorporators.

A new horizontal bandsaw is being installed at the Buckley Bay, B.C. mill which will increase the output from 100,000 feet a day to 125,000 feet. It is also proposed to put on a second shift, which will double the output. The Massett Timber Company employs 450 men, but this number will be materially increased.

The exhibition car of the Canadian Forestry Association will tour Nova Scotia during the coming summer on the invitation of the Provincial Government. In the car will be given motion pictures and lectures in the interests of forest conservation and fire prevention. The car will stop at a number of important centres.

Flames broke out recently near a camp owned by John Wigle, of Windsor, Ont., located in the vicinity of Leamington. Considerable damage was done to the timber but by hard work on the part of the men who had to dig trenches and fell trees, the camp was finally saved. The fight put up by the lumberjacks was a long and hard one.

Donald Potter, who for the past thirteen years has represented Consumers' Cordage Co., and during the greater part of that time has been manager of their Toronto branch, recently resigned to take

the position of general manager of the J. R. Sterling Twine Co., Limited, Walkerton, Ont. Mr. Potter has entered upon his new duties.

Fortune has smiled upon Richard Paget, a benchman, employed at the Piggott Lumber Co., Windsor, Ont. He was recently willed a legacy of \$15,000 by relations in England. The amount is not large as figures go, but Mr. Paget and his wife expect to return to their native land where they will be comfortable for the rest of their days.

The Montreal Board of Trade Council have passed a resolution favoring the construction by the Provincial Government of a waggon road connection between the new Temiskaming-Abitibi district and the terminus of the new line of the C.P.R. at Des Quinzes. The council believe that this would develop the district which is pulp-wood and timber.

The Colonial Lumber Company, of Pembroke, Ont., has bought from Mr. John Lumsden valuable timber areas consisting of Kippewa Islands, in Kippewa Lake. As the islands are close to the limits which the company is now operating, and contain a large acreage of good pine and hardwood, the purchase will very materially add to the company's timber reserves.

The Kinnon Lumber Co. who since their organization have had their offices in the Royal Bank Chambers, corner Spadina Ave. and King St. West, Toronto, have removed into much larger quarters in the same building. The company report that business has been exceptionally good with them during the past season and a large turnover in hardwoods is being done.

The Ontario Paper Co., who recently acquired extensive limits on the north shore of the Gulf of St. Lawrence from the Quebec Government, report that they are making a survey for the location of a new pulp mill but will not do any construction work on the limits in the near future. The company are not adding any buildings to their plant in Thorold during the present year.

Knight Bros. Co., Limited, of Burk's Falls, Ont., started milling operations early in May. They have a heavy cut to get out this year and the output will be about 5,000,000 feet. J. S. Parker, manager of the company, says in connection with the proposed improvement to their power plant, that they will start work on this about July 1st and it is expected that good progress will be made.

It was stated some time ago that the Singer Mfg. Co., St. Johns, P.Q., had purchased larger timber limits in the province, located back of Fassett, from the Gatineau Company. The new owners, when requested for some information regarding their intention to conduct logging or lumbering operations on the same, stated definitely that they had nothing for publication at the present time.

Officials of the International Paper Company have denied reports that the company is involved in negotiations for a merger with Canadian interests, which would combine a half dozen plants operating on the St. Maurice River and Quebec. A similar denial was also made by the St. Maurice Paper Company, subsidiary of the Union Bag and Paper Company, which was mentioned in connection with the report. Other companies said to be interested in negotiations were the Laurentide, Belgo Paper Company and the St. Lawrence and Wayagamack Companies.

The St. John River Log Driving Co. have started their fifth drive on the St. John River to salvage the logs which were carried down the river during the freshet before the booms completely sealed the river at Lincoln, six miles below Fredericton. The St. John River Log Driving Co. say they have no reliable information regarding the number of logs which have been carried down the river. The lumbermen of Fredericton, however, estimate the quantity at 2,000,000 feet. Most of the logs, which are salvaged, are pretty well down the river and are being rafted near St. John.

It is understood that an active movement is on foot with a view to establishing hardwood industries in New Brunswick. That province possesses considerable stands of valuable hardwood which have never been exploited, and it is with this end in view that a number of the mill men and limit owners are getting together. They feel that by co-operation and concentration much might be done to increase activity in the hardwood line. It is understood that a number of conferences have been held with railways and others concerned, and the outcome is awaited with considerable interest.

Advices from Sault Ste. Marie, Ont., state that a careful survey of that district shows 200 townships with a conservative estimate of hardwood timber of 24,000 acres to the township. A reduction of freight rates on hardwood logs to the Sault over the Algoma Central, is giving encouragement to several proposed woodworking plants. The by-products can all be disposed of, such as slabs for firewood, etc. One company has a contract for ten years to supply the Ford plant at Detroit with several million feet of hardwood lumber per annum, all of which makes for much activity in the Sault district during the coming season.

### Where All Forest Lands Are "Protected"

People entering the forests of New Brunswick up to November 1st next must register. The Royal Gazette recently contained a proclamation issued by the Minister of Lands and Mines under authority of the Forest Fires Act 1922, in which all forest land in the province of New Brunswick is proclaimed "a protected area" with the following regulations:

No person may enter upon any forest land after May 1st, 1923, until November 1, 1923, for the purpose of travelling, camping, fishing, or picnicing or for other purposes, without first having registered with a local fire warden, councillor, game license vendor, or other person duly authorized, giving his name, dates, and having obtained a registration certificate. Such certificate shall be produced when requested by any fire warden or other authorized person, provided that the following persons or companies shall not be subject to the above regulations, namely: licensees or owners of forest lands entered upon, or to their employees, or to the fire wardens, fire fighters, land surveyors or to persons accompanied by registered guides or to holders of hunting, fishing, guides or mining licenses. All persons shall when requested by any fire warden show their license and give the above mentioned information regarding their stay in the forest. Penalties for non-compliance with the above, not less than \$10 and not more than \$100 or 30 days in gaol.

This action is deemed necessary by the Government in a determined effort to prevent a repetition of the immense forest fire damage this year resulting from the carelessness or thoughtlessness of those entering the forest on pleasure bent. This regulation was passed last year, but was not enforced on account of the wet season. It is hoped that the registration certificate will bring to the minds of those who enter the woods a greater realization of the value of the forests and the necessity for always being careful of fire.

The adoption of the registration certificate is not an attempt by the Government to keep people out of the woods and deprive the fisherman, the camper or the hunter of his annual vacation. It is merely a regulation whereby each individual will be reminded and encouraged to be careful of fire when in the forest.

It is in keeping with the extra precautions being taken by private land owners this year, several of whom are placing special patrols to see that no people enter at all. In the past the fire hazard was augmented by tops and brush from logging but to-day this has been increased to hundred-fold by the addition of so much dry, dead material as a result of the standing timber being killed by the spruce bud worm. Forest fires, which once gain headway this year, cannot be expected to be controlled. The seriousness of the situation cannot be under-estimated and the owners of forest land as well as the

inhabitants of settlements and towns near extensive areas of forest cannot be too careful.

A review of the fire damage in previous years shows that those entering the forest, including the camper, fisherman, picnicher, have caused an average fifty per cent of the total damage—as much as all other causes combined. In 1921, the year of such heavy fire losses, seventy-five per cent was traced to the carelessness of those entering the woods. It is the only serious cause of forest fires which has not been restricted in the past. The settler cannot burn his slash only under regulations as prescribed by law and controlled by the fire warden. Railway companies are not allowed to operate locomotives which through defective appliances may set a forest fire. Mills and other plants operating near forest land must be equipped with proper screens before being allowed to operate. In this way forest losses from these causes have been greatly reduced, the damage from settler's fires being reduced from 75% of the total damage in 1920 to 1.5% in 1921. But the person entering the woods has not been restricted in any way. He has come and gone as he pleased and, while the majority have been careful of fire, the camp fires neglected or burning tobacco carelessly thrown away has caused an annual loss to forests amounting to hundreds of thousands of dollars—a loss which is not replaceable for a century.

Fig. 25—London Combination Mixer  
Nos. 4 and 6

### LONDON CONCRETE MIXERS

are built to give continuous service under the most exacting conditions. They do rapid work and produce concrete with low labor cost.

LONDON MIXERS are being specified by engineers who know from experience that the first cost of a machine should not be the deciding factor when purchasing equipment. Slow production and breakdowns put the contractor out of business. The contractor can rely on the "LONDON" when profit depends on constant service and rapid production.

#### MADE IN CANADA

We manufacture Concrete Mixers, Hoists, Air Compressors, Pumps, Brick, Block and Tile Machines, Barrows, Carts, Silo Moulds, Ornamental Moulds and Tools.

Olipphant Timbers, Limited, Victoria, B.C., is a new firm with a capital of \$50,000.

T. A. Burrows, president of the Burrows Lumber Co., Winnipeg, Man. was a recent caller upon the trade in Toronto.

Col. J. Lightbody, of the Sidney Mills, Sidney, B.C., spent a few days in Toronto and Montreal recently on business.

The Pacific Coast Cedar Pole Association, Limited, Vancouver, B.C., was recently incorporated with a capital of \$25,000.

The Stetson Cutler mill at Pokiok, N.B., and the Randolph & Baker mill, St. John, N.B., have started operations for the season.

The Langstaff-Schurg Co., of Emo, Ont., recently started operations in their sawmill. The cut this year will be the largest in a long while.

Terry-Nicholson-Cates Limited, Toronto, have been appointed Ontario sales agents for the Schull Lumber & Shingle Co., Limited, New Westminster, B.C.

There has been a marked improvement recently in shipments of lumber via the Panama canal to the New England states. A demand in Montreal has also developed.

Murray & Gregory's large sawmill at St. John, N.B., recently began operations. A 10 per cent increase in wages for the employees was, apparently, satisfactory for a full crew is at work.

Goderich Mfg. Co., Goderich, Ont., are contemplating building a new saw mill at Stratford, Ont. It is rumored that the company will move their business from Goderich to Stratford sometime next fall.

Speaking at the inauguration of the new quarters of the Quebec Reform Club recently, Premier Taschereau intimated that a large pulp and paper mill will be established in the city of Quebec in the near future.

The Commercial Travellers' Association held a meeting recently in their quarters on St. John St., Quebec City. Gustave Piche, chief forester of the province, delivered an interesting lecture to them on forest preservation.

The employees of the pulp and paper mills of J. R. Booth, Ottawa, and E. B. Eddy Co., Hull, were recently granted an increase of 5 cents per hour, and any danger that might have been of trouble in the mills has been averted.

C. E. Harris, who is well known in Ontario lumber circles, in connection with traffic matters, has left Toronto for Ford, Ont., where he has taken an important position in the Transportation Department of the Ford Motor Car Co.

The Spruce & Cedar Lumber Co., Kamloops, B.C., will start work shortly on a new \$60,000 sawmill to be erected in the North Thompson Valley. The building will be two storeys, 40 ft. x 80 ft. in dimension and of frame construction.

The steamer I. Watson Stephenson arrived at Sarnia recently with a cargo of 800,000 feet of lumber for Laidlaw-Belton Lumber Co. and was unloaded at the company's wharf. The Stephenson was the first steamer to bring down a cargo of lumber from the upper lakes this season.

L. L. Alstead, of Appleton, Wisconsin, head of the Great Lakes Paper Co., recently spent a few days in Port Arthur and Fort William in company with Hardy S. Ferguson, paper mill engineer. It is understood that the site for the new pulp and paper mill was under consideration.

Samples of wood from King Tutankhamen's tomb have been asked for by the forest service for use by its forest products laboratory at Madison, Wis., to determine what effect the extreme age has had on the physical and mechanical properties and upon the glue and joints of fitted pieces.

The number of forest rangers in the province of Quebec has recently been increased. Instead of 1,200 men being employed in co-operation by the government and private firms, there will be more than 1,500 forest rangers on duty. Extra vigilance will be taken to guard against the outbreak of forest fires.

Carlton M. Smith, of North Tonawanda, N.Y., who has been trading under the name of Smith, Fassett & Co., announces that he has incorporated his business and the corporate name will be Smith,

**RADCLIFF SAW MFG. CO., LTD.**

1550 Dundas St. West, Toronto

Fassett & Co., Inc. Carlton M. Smith is president; M. S. Tremaine, vice-president and treasurer, and R. H. Kay, secretary.

W. H. Jackson, of West & Jackson, Tillsonburg, Ont., was in Toronto recently on business in connection with the hospital which the town proposes establishing. Mr. Jackson has been a member of the municipal council of Tillsonburg for many years and has always taken a deep interest in the welfare and progress of the town.

Several promotions have recently been made in the organization of the Abitibi Power & Paper Co., Iroquois Falls, Ont. The process of consolidation of all work of the same kind, no matter in what department it comes, has been advanced considerably of late. H. J. Buncke has been made chief engineer, succeeding T. J. Jaeger, who has gone to Thorold. R. Stover has been appointed plant engineer and W. B. Crombie becomes construction engineer for all work whether mill or railway.

According to the second divisional court, Charles Austin, of Chatham, Ont., isn't obliged to pay C. H. Houson \$525 and costs for the spruce trees cut down between the two properties. Mr. Justice Mowat, of Toronto, gave Houson judgment but, on Austin's going higher, the action is dismissed with costs and the appeal is allowed with costs. "There can be no doubt," said Mr. Justice Riddell and his associates, "that the proper line of the street is as contended by the defendant."

The lumber firm of White, Gratwick & Mitchell, North Tonawanda, N.Y., has bought the steamer Charles Beatty for use in carrying lumber from Thessalon, Ont. The boat was built at Toledo in 1902 for the lumber trade. Just before the war it was sold and became the Usona, then sold again to French parties and taken overseas, becoming the Port du Caen. Last summer the steamer was brought back to the lakes by Canadian parties, who called her the Bayusona, and before the end of the season the name became the Roslyn.

A local company has been formed to construct and operate a sawmill at Wolf Creek seven miles north of Wasa, B.C. It is expected that the new plant will be turning out lumber toward the latter end of this month and will have a sawing capacity of 25,000 feet per day. The company possesses an excellent stand of fir, larch and pine. The directors of the company are:—Malcolm Horie, managing-director; J. A. Arnold, president; M. A. Beale, secretary-treasurer; George Leitch; Isaac Baxter; T. M. Roberts and James Arnold, directors.

The B.C. Lumber Inspection Association has been completed. Five directors have been elected, three representing the manufacturers and two the wholesalers. P. D. Roe, F. R. Pendleton and John McMillan represent the former and P. A. Agnew and Russell Underwood the latter. The new directors will hold a meeting in the near future in order to consider the question of policy and the making of definite arrangements for instituting an inspection service of cars in Eastern Canada and the prairie provinces. The outcome of their decision is being awaited with considerable interest.

Reforestation is finding favor in North York and Simcoe South, as is evidenced by two distinct movements in that direction. Charles Lewis of Yonge street has set out 2,000 sprigs of Scottish pine on his lot on the second concession of King. At the request of the Council of Innisfil, the Ontario Government, under its forestry branch, will plant five acres on the corner of the seventh concession, and the Provincial Highway, and another five acres in what is to be known as Innisfil Park. The Council will care for these new plants, and erect suitable fences for their protection.

The plant of the Oakville Wirebound Box & Basket Co. at Oakville, Ont., was completely destroyed by fire recently. The loss, which is principally in valuable machinery, is estimated at about \$200,000, and is only partially covered by insurance. The blaze occurred just at the opening of the berrying and fruit season and half a million strawberry baskets intended for the packing of Oakville's famous crop, and 250,000 cherry boxes were consumed in smoke. The company expects to care for all the business which it has on hand from its Burlington plant. The cause of the blaze is unknown.

An action for \$3,000 damages has been taken in the Supreme Court of Ontario by John Theriault, of Ottawa, against the Hawkesbury Lumber Company, Ottawa, in connection with the death of Emile Theriault, son of the plaintiff, who died of typhoid fever on November 22, 1922. He was employed by the Hawkesbury Lumber Company and was working at McLaren's Bay in the Temiskaming district. It is claimed that the men in this camp were dependent on the waters of the bay for their drinking supply, and it is alleged the company permitted a dead horse to remain in the water of the bay for three weeks, thus contaminating the water, and causing some of the men to take typhoid fever. Though no statement of defence has been filed yet, it is announced the company denies allowing the horse to remain in the water for such a period, and that the animal was in the waters of the lake and not in McLaren's Bay.

## Winter Performance Proves "Caterpillar"\* Efficiency

Such big operators as the Abitibi Power and Paper Company, the Mt. Murray Woodlands Corporation, and the Anglo-New Foundland Development Company have proved conclusively the superiority and dependability of the "Caterpillar" Tractor for winter logging. The experience of Holt users is the soundest reason for every lumber and pulpwood manufacturer to investigate "Caterpillar" performance in last winter's operations. Holt service is equal to every requirement. We have convincing facts to give you applying to your work.

Mill and Timber Limits for sale. Timber large proportion Hardwood. Mill twenty thousand capacity. Large cattle and breeding ranch. Will sell with or without ranch. Located in Eastern Ontario. Address Box No. 50, Canada Lumberman, Toronto. 22T-f.

### For Sale Cheap

Circular Sawmill, Building and Machinery; Steam Feed, suitable for Ties and Lumber.

also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

## TENDERS FOR PULPWOOD AND TIMBER LIMIT

Tenders will be received by the undersigned up to and including the 22nd day of June, 1923, for the right to cut pulpwood and timber on a certain area situated in the watershed of the Trout and Chapleau rivers in the district of Sudbury, comprising an area of 1,049 square miles.

Tenderers shall state the amount per cord on pulpwood that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for Spruce and 40 cents per cord for other pulpwoods, or such other rates as may from time to time be fixed by the lieutenant-governor-in-council, for the right to operate a pulp Kraft mill and a paper mill.

Tenderers shall also be required to say what they are prepared to pay, per thousand feet board measure, for the following classes of timber, over and above the upset prices in addition to crown dues:

Red and white pine, upset price, \$6.00 per M. ft. B.M.

Spruce (too large for pulpwood), \$5.00 per M. ft. B.M.

Jackpine (banksian), \$2.50 per M. ft. B.M.

The crown dues on pine including Jackpine being \$2.50 and on Spruce \$2.00 per M. ft. B.M. or such other rates as may from time to time be fixed by the lieutenant-governor-in-council.

The successful tenderer shall be required to erect a mill or mills within the limit or at some point in Ontario approved by the minister, and to manufacture the wood into Kraft pulp, and also such portion thereof into Kraft paper when required so to do.

Parties making tender will be required to deposit with their tender a marked check payable to the honorable the treasurer of the Province of Ontario, for fifty thousand dollars (\$50,000.00) which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said (\$50,000.00 shall remain on deposit until the Kraft pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of \$50,000.00 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelopes and marked plainly on outside "Tender for Trout-Chapleau Pulp and Timber Limit."

BENIAH BOWMAN,  
Minister of Lands and Forests.  
Toronto, April 16th, 1923.

N.B.—No unauthorized publication of this notice will be paid for. 9-12

### Timber Limit for Sale

Approximately fifteen square miles, vicinity of Burks Falls, Ontario. Large percentage of timber Hemlock and Birch. Can be secured with part cash payment, balance in lumber. Good opportunity for small operator. Apply Box 256, Canada Lumberman, Toronto. 10-13

### FOR SALE—MILL AND TIMBER IN WEST KOOTENAY, B.C.

To close an estate we offer for sale 3,708 acres of timber, virgin forest, consisting of cedar, pine, hemlock, spruce and fir estimated at 93,000,000 feet (logs), 100,000 telephone poles and 500,000 split fence posts, together with mill, yards, office building and cottages. The mill is situated at Koch's Siding and the timber is on the Little Slokan River, about 6 miles distant. Transportation is all that could be desired. The entire property can be purchased at a reasonable figure. We desire inspection and offer. Terms will be granted to responsible parties, and for particulars communicate with the BANK OF MONTREAL, New Denver, B.C. 9-12

## Miscellaneous

### For Sale

Steam Saw Mill complete. Waterous outfit, double edger, steel rails, log track and lumber tract, also first class building, loaded on cars or where it stands. Will take lumber in exchange. Duncan Campbell, Moffat, Ont. 9-12

## An Excellent Opportunity For Contractor or Lumberman

We have large Limits on North Shore of Georgian Bay. Best quality Birch and other hardwoods, also Hemlock and Cedar. Would like to hear from party owning Tractor or Steam Log Hauler with a view of contracting to take timber out on shares or we would consider selling.

For further particulars—Apply to The North American Bent Chair Co. Limited, Owen Sound, Ontario, Canada. 11-12

## Sale of Timber

Further information may be obtained upon application to the undersigned or to Mr. A. H. Hucksion, Crown Timber Agent, Sault Ste Marie, Ontario.

BENIAH BOWMAN,  
Minister of Lands and Forests.  
Toronto, May 1st, 1923.  
N.B.—No unauthorized publication of this notice will be paid for.

### D. FLORENCE & SONS

Bethune St., Peterborough, Ont.  
Dealers in Scrap Iron, Metals, Second-Hand Machinery, Pipes, etc. 2-24

### For Sale

One car, 60 lbs. second hand Rails. The Laberge Lumber Co., Ltd., Sudbury, Ont. 11

### For Sale

Standing timber for sale, about 3 million ft. Box 262, Canada Lumberman, Toronto. 11-14

## Sale of Timber

Tenders will be received by the undersigned up to and including Monday, the 11th day of June, 1923, for the right to cut the timber on Berth 1.E. in the Mississauga Forest Reserve, in the District of Algoma.

Further particulars as to terms and conditions of Sale, etc., may be obtained upon application to the undersigned, or to Mr. A. H. Hucksion, Crown Timber Agent, Sault Ste Marie, Ontario.

BENIAH BOWMAN,  
Minister of Lands and Forests  
Toronto, May 10th, 1923.  
N.B.—No unauthorized publication of this Notice will be paid for.

## Sale of Timber

Tenders will be received by the undersigned up to and including Friday the 15th day of June, 1923, for the right to cut the timber on the South-west part of the township of Barr, and the North-east part of the township of Kittson, in the Temagami Forest Reserve, district of Temiskaming.

The red and white pine timber only is offered in the township of Barr.  
For conditions of sale, maps, etc., apply to the undersigned or to Mr. S. C. MacDonald, Crown Timber Agent, New Liskeard, Ont.

BENIAH BOWMAN,  
Minister of Lands and Forests.  
Toronto, May 12th, 1923.  
N.B.—No unauthorized publication of this notice will be paid for. 10

## Jack Miner is Forest Conservationist

"I am a forest conservationist first, last and all the time," said Jack Miner, the noted wild-life advocate, in a recent interview. "A man couldn't run fast enough to give me a home where the trees are already grown. I want to grow my own. I have studied the woods all my life, and, while I have never read any books on forestry, I have done some tall thinking and studying in the woods themselves. In the last ten years I have planted fully ten thousand trees on my own place at Kingsville, Ontario, and I just want to say that I consider it one of the most important and satisfying jobs I have ever done. The last four thousand trees I got I planted in clay soil where trees wouldn't grow. This had been proved because another fellow's father, and Uncle Dave, had tried it and found it couldn't be done; but my old backwoods education refused to be discouraged. I planted trees in 1915, and although, when planted, they were no higher than ordinary plants, they are now 15 feet high."

## AUCTION SALE

of

## Valuable Timber Limits and Saw Mill Property

To be sold by U. H. Dandurand Limited, Auctioneers, 101 Notre Dame West, Montreal, at 2 P.M. (Daylight time) June 20th, 1923, 15 miles of Leasehold Timber Limits and approximately three miles of Freehold Limits, situated near Rawdon village in the Township of Rawdon and Chertsey, Montcalm County, Province Quebec. Limits only worked one year.

Also a fully equipped sawmill on Lac Oureau River in Rawdon village, 1/3 mile from Canadian National Railway Station. Practically new saw mill equipped to saw lumber, spoolwood and ross pulpwood. River equipped to hold logs and haul up to mill. Other buildings on five acre mill site are, barn (large enough to house thirty horses) office building, blacksmith shop, oil house, concrete boiler house, engine and pump house.

For plans, terms and full particulars so as to arrange to inspect property and cruise limits before sale apply to Miner Lumber Company, Limited, Room 2, 207 St. James Street, Montreal, or to Auctioneers, U. H. Dandurand, Limited, 101 Notre Dame West, Montreal. Montreal, May 25, 1923.

### Settling Difficulties in Lumber Sales

As long as contracts are entered into and orders given there will be kicks, grievances and cancellations. Some of these are, no doubt, justifiable, some honest, some trifling, some unreasonable and some deceptive. Some are raised from purely factious motives or on general principles that it is well to make objection so that the other fellow may give you more than you bargained for or go out of his way to see that your wishes are met and your whims satisfied. This is the attitude which not a few assume. They appear to take special delight in seeing that everybody who caters to their interests is kept on his toes or is kept up in the bit.

Whether anything is gained by such a course or not, is doubtful, but there can be no mistaken notion that many complaints arise because the specific terms of the contract are not observed, the grade, widths and thicknesses adhered to, the conditions of payment or shipment disregarded, etc., hence some squabble or other misunderstanding. Generally speaking, however, when a firm is a legitimate and responsible one and has an honorable record and the one, with whom it does business, is known and esteemed, there is little cause for calling in an Arbitration Committee, a Bureau of Information or any of the other agencies which seek to settle or adjust points of difference. These bodies serve a useful purpose but, perhaps, their services are too frequently requisitioned.

If more attention were given by the customers to the firms from whom they bought, and the latter paid heed to those to whom they sell, there would not be so many complaints regarding non-shipment or non-filling of orders, rejected cars and other pleas and claims for rebates and allowances.

Recently the secretary of a lumber association across the line stated that some complaints were being received that customers were arbitrarily refusing to unload and that shippers were arbitrarily delaying shipment of orders. In some cases the association had rendered a service in this matter and the question arose whether a nominal charge should be made. It was stated that the organization should hold itself out to render service on either of the two situations to members without charge, except for actual disbursements.

It was further declared that there would have to be a limit to this free service, that if the members stated that a shipment was rejected and the association succeeded by letter or telegram in getting the customer to unload the shipment, the free service would end

right there; if a subsequent claim arose out of the transaction, it could be handled either on the basis of a collection claim or arbitration as the circumstances required. If the service was requested to get a mill to fill the order, the service would stop when the mill made the shipment, and subsequent circumstances would determine the necessity of a collection claim or arbitration. Another thing pointed out was that if such a service was free and the matter handled by the Association, it would be a strong inducement to secure new members.

A Canadian member of the Bureau of Information, to whom this matter was submitted, said that a propaganda to encourage new members might be good but otherwise he had not much sympathy with the efforts to look after rejected cars and the non-shipment of orders. Concerning the former, he said, "Take, for instance, the case of rejected cars. If honorable firms are jointly interested, we cannot see any reason for a patron rejecting a shipment. On the other hand, we have known instances where the wholesalers have misrepresented grades in order to effect a sale and in turn their patron turning the car down. In such cases we think the wholesaler should bear the cost of any service that the association may render. We have seen many flagrant cases of where grades have not been up to the mark and the wholesaler has been to blame. Inasmuch as honorable firms would not need assistance in this matter, it seems to us that a charge should be made, said charge to cease immediately after the car had been unloaded. We also think the same principle should be applied to the non-shipment of orders."

With the above attitude, many lumbermen will agree. Another association is having it announced freely that its members buy from only legitimate wholesalers and manufacturers, this is going a long way towards relieving misunderstanding, dissension and delay.

In closing, it might be stated that the words which appeared in a previous edition of the "Canada Lumberman" under the caption of "How far do you honor contracts," would not be inappropriate at this point, and here they are,—"The retailer, wholesaler or manufacturer, who faithfully and loyally carries out his contract, even though at times it may be at a pecuniary loss to himself, is the gainer in the long run, not only in the matter of earning the goodwill and consideration of his associates in the trade, but in numerous other ways which are evident to every fair-minded, honest-thinking, square-dealing lumberman."

## "Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

Prices and full particulars may be obtained by writing—

**THE SMITH FOUNDRY CO., LTD.**

Fredericton - New Brunswick

Linn Logging Tractor on the Main Haul. At the beginning of a continuous up-grade, Five Miles in length and varying from 5% to 7%.

# THE LINN LOGGING TRACTOR

An engineer, when laying out a railroad line, would never think of running a grade much over 3%—yet it is an everyday occurrence, during the hauling season, for Linn Logging Tractors to haul heavy trains of saw logs or pulp wood up grades as steep as 7%, and to haul smaller trains up grades as steep as 15%. And to go down sanded hills as steep as 30%.

Pictured above is one of the average ten sleigh trains of the T. S. Woollings & Co. Limited—commencing its long up-grade lug. Picture was taken from the tenth sleigh. Trains consisted of ten, 20' rack sleighs—each sleigh loaded with seven cords, and the tractor carrying four cords. And the Woollings Company moved their 8,000 cords over the entire distance of this seven mile road—in 55 days, and at a gross hauling cost of 51½ cents per cord.

This is the fifth of a series of photographs taken in operations in Ontario and Quebec, where Linn Logging Tractors were in operation—the sixth will appear in the June 15th issue of this magazine.

## Of Interest to Lumber Dealers

Because it fills a *real* need

### MELDRUM

LUMBER HAULING ATTACHMENT  
(Patent Applied for)

PRICE \$125.00 f.o.b. Toronto

Canadian Distributors

**W. C. Warburton & Co. Limited**

670 Bloor St. W. Toronto, Ont.

In addition to the Meldrum Lumber Hauling Attachment, we are distributors of two and four wheeled trailers—for the Fordson—equipped with lumber unloading device.

# THE BERNARD FRICTION CLUTCH

## AND WHAT IT WILL DO

Friction Pulley Style C

Increase efficiency in production.

Reduce the cost of upkeep.  
Facilitate operation.

Control of each department.

Safety to workmen and safety to the belt.

Clutch, Style F

Wherever high grade equipment is desired, Bernard clutches are the selection. Consult our engineering service for your problems and how to handle special installations.

Duplex Clutch, Style B.B.

Friction control means better machine, more production. We are the largest Canadian manufacturers of Friction Clutches in Canada. Ask for our catalogue.

**The A. Bernard Industrial Co., Fortierville, Que.**

# C. M. P. Powdered Milk

Brings Fresh Liquid Milk to Drink and Cook with to the most out-of-the-way spots.

"TRUMILK"

Powdered whole milk in 45 lb. and 90 lb. drums and 180 lb. barrels. Order direct from us.

"MILKSTOCK"

Powdered skimmed milk in 50 lb. and 100 lb. drums and 200 lb. barrels. Order from your jobber or direct.

Powdered Milk is convenient. See that the cook has always sufficient on hand. He mixes only what he needs at the moment—the remainder will keep until needed.

C.M.P. Powdered Milk is simply pure cow's milk—either whole or skimmed, as you may order—without the water. The original flavor and characteristics are there. Simply put the water back and you have fresh liquid milk.

**CANADIAN MILK PRODUCTS, LIMITED**  
347 Adelaide Street West, Toronto, Ont.

366 St. Paul Street West,  
Montreal, Que.

British Columbia Distributors:  
Kirkland & Rose  
130 Water Street, Vancouver, B.C.

428 Main Street,  
Winnipeg, Man.

# Pink's Lumbering Tools

The Standard Tools in every province of the Dominion, New Zealand, Australia, etc.  
We manufacture all kinds of lumber tools. Light and Durable.

Long Distance Phone, No. 87

Send for Catalogue and Price List.

Sold throughout the Dominion by all Wholesale and Retail Hardware Merchants.

## The Thomas Pink Company, Limited

*Manufacturers of Lumber Tools*

PEMBROKE

ONTARIO

It's a Pink any-  
way you take  
it and it's the  
best Peavey  
made.

*Not altogether what we say,  
but what users say*

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,  
in calm weather, 30,000 in a head wind.

**West, Peachey & Sons Simcoe, Ont.**

## Gerlach Modern Machinery Produces Cheaper and Better

Tight and Slack Cooperage Stock for Barrels, Kegs and Tubs, ready to set up into non-leaking packages of 5 to 120 gallons liquid capacity, or for semi-liquid and dry materials up to 800 lbs. weight. We manufacture machinery for sawing, jointing, planing and crozing staves; for sawing, jointing, dowsing, planing and circling heading.

### MODERNIZE YOUR PLANT

Scrap Machinery invented before the Civil War and install a Gerlach Outfit that will make Tight Barrels that are tight, from any strong non-porous timber.

### BUILD

Barrels with perfect joints that will not leak; a product that is infinitely superior to the tin and iron near barrels now being experimented with. Wood is tasteless, stainless and rustless and being a poor conductor of heat or moisture, keeps its contents in their original condition.

### CYLINDER SAWS RESTEELED

### MODERN BOXBOARD MACHINERY

## Use Arrow Head Saws

The Chrome Vanadium Steel of which Arrow Head Saws are made and whose special process of tempering is known only to us, is giving mill owners the greatest "saw mileage" ever known.

**T. F. Shurly Co., Limited**  
St. Catharines, Ontario.

**Service under  
all conditions**

## The Lumber Truck with Steel Wheels

Keep your deliveries and car unloading going smoothly always by using this handy detachable truck with wide tire steel wheels. The wide tire steel wheels can not come off and any width of tire may be used.

Wood parts are, air seasoned and kiln dried; thoroughly ironed and braced. Axles are high quality square steel. Why not learn all particulars by writing for our free catalogue now?

**Tudhope-Anderson Co., Ltd., Orillia, Ont.**

### AMBEST

The great advantage over other Metallic Packings is in the fact that from the same can any size may be had for any rod or valve stem, large or small.

### BULL BEARING ALLOY

Combines low cost and endurance in a surprising fashion. Try it out. Our Feed Water Treatments will solve your scale troubles.

**BEVERIDGE SUPPLY COMPANY LIMITED**  
628-630 St. Paul St. West, MONTREAL, P. Q.

# Shingle, Box-board and Heading Machine

This machine carries a 40" saw and is of the most modern type in every respect. Our Double Shingle Jointer which also carries a 40" saw and our iron frame Packer makes a most complete outfit. Write for printed matter and prices.

*Gray Iron Castings a Specialty.*

**The G. Walter Green Co., Limited**  
Peterborough — Ontario

## Brantford Roofs

*And NOW—Still Better Roofs*

AMONG the people who know most about Roofing materials, Brantford Roofing has been for many years the standard by which other roofing is judged. Now we have perfected new processes, which improve the quality of Brantford Roofs.

This policy of keeping the leadership in quality—has held our big lead in sales.

UNFADING COLORS—Brantford Roofs have the natural colors of the slate with which they are faced—Blue-Black, Red, Tile-Red and Green.

Distributed under Brantford Roofing Trade Marks, through Brantford Roofing Dealers. Stock carried, information furnished, service rendered by our dealer in your district.

BRANTFORD ASPHALT SLATES are sold in 4-in-1 Slabs. WINTHROP TAPERED ASPHALT SLATES have heavy butts. ARRO-LOCK SLATES are laid in diagonal lines—OVER OLD ROOFS.

Write for descriptive literature and advice on Roofing problems.

## THE MARK OF DISTINCTION IN CIRCULAR SAWS

The first Circular Saws made in this Country were placed on the market by R. HOE & CO. in 1828, and GENUINE HOE SAWS have held the leadership in QUALITY, FINISH and SATISFACTORY SERVICE during the 94 years intervening to the present day.

For all purposes, and under all climatic conditions, the GENUINE HOE CHISEL-TOOTH and SOLID TOOTH CIRCULAR

SAWS have proven their superiority in every part of the World, and backed by a guarantee of absolute satisfaction no operator could do better than to use GENUINE HOE SAWS exclusively.

# GATES FURNACE

## For Burning Sawdust and Hog Fuel

*Will burn tan bark, hog fuel  
and sawdust efficiently, with up  
to 60% moisture.*

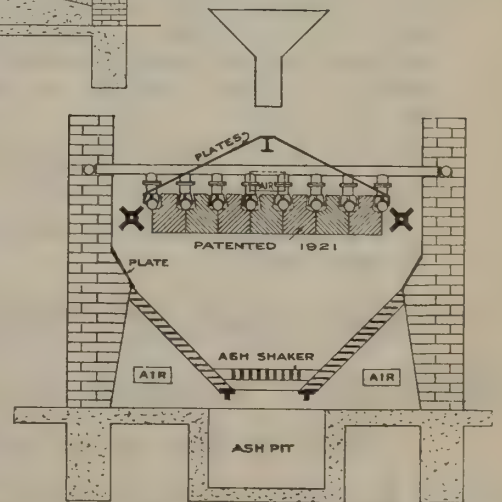

**Gates Air Cooled Sus-  
pended Arches**

**Boiler Door Arches and  
Jambs**

The Water or Air cooled Suspension Arch, suspended over a furnace built with incline grates, to prevent the coning of sawdust and refuse material, combined with the automatic feed and drying chamber suspended directly over arch, absorbing the heat from arch roof which removes the required percentage of moisture from the material to be burned. Note that fuel is partly dry before receiving air while passing over dry plate chamber at the lower edges, thence into combustion chamber space over the fuel bed. All ash is removed by stoking grate at the bottom of furnace. All fuel sliding down the incline grates comes in contact with a special draft action, owing to the horizontal air spacing, through the incline gates on either side, the draft currents arrive at a focus of combustion in the centre of the furnace, causing the gases and flame to meet and roll towards the edges of dry plates, thus increasing the drying capacity, and thoroughly drying tan bark or fuel which is being burnt.

The blocks in these arches are supported independently of the other, allowing any one brick to be removed and replaced without disturbing any other portion of arch.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"**

## SAVE 400,000 TO 500,000 FT. OF LUMBER A YEAR

If you work timber tracts from two to ten million feet in size it will pay you many times over to investigate the CLARK FIVE FOOT BAND MILL. It will saw your lumber as cleanly and accurately as larger Band Mills and enables you to have from 10% to 15% more lumber to sell than if you sawed your logs on a circular mill with its 5/16" to 3/8" saw kerf.

It will mean a year's time from 400,000 to 500,000 feet of lumber which at \$25.00 per thousand amounts to almost \$15,000 a year with no increase in logging or sawing costs.

The slight increase in initial cost over the portable circular mill is greatly offset by the savings effected in a few months' time.

# ATKINS

## STERLING QUALITY SAWS

### The World Over

In every progressive sawmill, woodworking plant and furniture factory, you will find that the saw users are acquainted with the high quality of Atkins Sterling Steel Saws. They are making money for their owners by turning out work at the lowest possible price.

*It's the super quality of Sterling Steel, our exclusive formula that makes Atkins Saws supreme.*

If your mill is not using them exclusively, why not make a complete installation and profit by the service that is built into them. Send for Atkins literature, and learn why

## "Speed to Burn"

The millman who wants a machine capable of turning out lath in large quantities will not be disappointed in this No. 3 Lath Bolter. It has speed to burn. Furthermore, it has the "stamina" characteristic of all "LONG" machines, for operating at capacity for long periods.

Used by many of the largest mills in the Dominion.

Floor space required—4' x 4' 6". Weight 1,600 lbs. Maximum power required 15 H.P.

Recent improvements have been made, which the illustration does not indicate. Write today for full information.

# PORTABLE SAWMILLS

The Upper Fraser River Lumber Co. freighted a portable outfit, like the above, seventy miles over rough country to cut material for their big mill at Dome Creek, B.C.

They cut on an average of over 12,000 ft. per day, they turned out 200,000 ft. for their own use, sold several thousand dollars worth of lumber, produced over 2,000 ties and 100,000 ft. of lumber for stock. All this lumber came off their mill sight and was cut on the

## Waterous Portable Sawmill

*We back this mill for strength, efficiency and simplicity against any portable outfit being manufactured. Hundreds are in use in every part of Canada.*

### Important Announcement

A Shingle Nail is now being manufactured in Canada which should last the life of British Columbia Red Cedar Shingles.

This is a heavy gauge nail, has sharp point, wide head with thickened shank under, and is protected with a heavy coating of pure galvanized spelter applied by hot-dipped process.

Red Cedar Shingles applied with such nails assure a roof of lasting satisfaction.

Every lumberman could stock these nails to advantage. We will gladly send samples.

**British Columbia Lumber Commissioner**  
51 Yonge St. Toronto

## A Permanent Lumber Service

**A**FTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually  
6,000,000 ft. birch annually  
2,500,000 ft. beech annually  
2,500,000 ft. elm annually  
900,000 ft. basswood annually  
200,000 ft. ash annually  
6,000,000 ft. hemlock annually  
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

# Why you can depend upon Long-Bell Hardwoods

## *Modern methods in manufacture*

Logs from our own virgin forests.

Each log selected and cut for the purpose for which it is best adapted.

Class of timber producing excellent widths and lengths.

Manufactured in our own Hardwood Mills, equipped with modern band machinery.

Manufacture supervised by experienced hardwood men.

Thoroughness given every detail of manufacture.

Particular care given to uniformity of thickness—carefully edged, equalized and trimmed.

End-buttet with mitre toothed saws.

Carefully sorted at chains.

Drying yard arranged to give thorough circulation to stocks in pile.

Every detail in sticking and drying carefully observed to insure best results.

Experienced inspectors grade lumber for shipment.

Double check inspection at cars in loading to insure uniform grades.

Same care exercised in loading in car as in manufacture.

Easily identified by the Long-Bell trade-mark on the end of every board.

Long-Bell Trade-marked Hardwoods are manufactured in our own Hardwood Mills exclusively, with modern band machinery.

Experienced hardwood men supervise the manufacture, insuring thoroughness in every detail of millwork.

Particular attention is given to uniformity of thickness; it is carefully edged, equalized and trimmed.

These modern methods in manufacturing contribute materially to the dependability of Long-Bell Trade-marked Hardwoods.

# BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

### HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

EVERY strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This  mark identifies genuine Link-Belt Chain.

## The Final Whitewood Operation in Ontario

*Honor of Cutting Last Whitewood Timber in the Province Goes to George A. Oldrieve, of St. Thomas, Where he Operates Busy Mill, Sawing Native Hardwoods—Until Recently These Valuable Trees Sometimes Known as Yellow Poplar Were Part of an Annual Harvest—Last of the Huge Whitewood Logs on Their Way to the Mill*

George A. Oldrieve,  
St. Thomas, Ont.

"Lumber is the cheapest commodity in the world to-day considering the money invested in its production, the various processes of manufacture, the length of time it takes to fell the tree and convert it into dry stock, the number of hands through which it passes, and other considerations which do not require to be enumerated. I am speaking particularly of hardwoods. Lumbermen must get a better figure for the upper ends in order to break even with the game. The quality of timber is deteriorating and the sources of supply growing more scattered and scarce all the while. The logs are not nearly as large as they formerly were which makes the cost of manufacture heavier. No. 1 common and firsts and seconds and selects are getting proportionately less all the while. In maple, elm, basswood, birch and ash, the percentage of F.A.S. is only from 15 to 20 per cent and of selects from one-half to one-third of this amount. No. 3 common runs practically one-third to one-quarter. The sale of inferior grades has been very slow during the past couple of years."

So spoke George A. Oldrieve, of St. Thomas, Ont., who conducts a busy hardwood mill in that city and has for many years bought up timbered farm lands and other property in Elgin and adjoining counties. Mr. Oldrieve is a man who upholds the best traditions of his trade and gives scientific study to the production of his lumber. The slabs and edgings are disposed of for fuel and find a ready sale, while the low ends of the hardwoods which he cuts, are worked up into fish box shooks and sold to the fishermen who industriously ply their calling on the shores of Lake Erie. Some seasons as many as 25,000 boxes are turned out by Mr. Oldrieve who is himself interested in the Elgin Fish Company. At Plum Point, on Lake Erie, the company conduct pound net-fishing, capturing herring, pickerel, whitefish, perch and other varieties.

Mr. Oldrieve is not a fisherman, fond as he is of the sport, but at heart and by training and heredity a lumberman. His native place is Glencoe, being a son of John Oldrieve, for many years a successful sawmill man, who operated a plant at Glencoe until the surrounding timber was all cut up. When young Oldrieve went to school he frequently took charge of a tally book after hours and got to like the business. When he left home his first job was selling lumber in Edmonton where he spent two years. He then returned and bought the sawmill of A. McKillop & Sons at Wallacetown, Elgin County, which he operated for four or five years. Then as the timber would not come to him, he decided to get nearer the growths of basswood, elm, hard and soft maple and beech by removing the plant to St. Thomas where he acquired a site of several acres of land at the corner of Redan and Inkerman Sts. This was in 1916 and Mr.

Oldrieve's mill has been kept busy ever since cutting up the woods already named, along with a sprinkling of oak and hickory which are, however, growing scarce. The plant has good railway connection a G. T. R. siding running right into the yard.

### Handling the Product at the Mill

Mr. Oldrieve's mill is a two-storey structure, 30 x 70 feet, and the cutting capacity is about 25,000 feet a day. The logs are brought to the yard from farms in South-Western Ontario by railway cars and motor trucks, being cut in 12, 14 and 16 foot lengths. In the yard the logs, some of which are 30 to 40 inches in diameter, are drawn to the pit at the foot of the jack ladder, or haul-up, by stone boat in the early spring days, and at other times by a log truck which is a rather unique vehicle, travelling on wheels 12 inches wide and with a platform only 12 inches from the ground. The logs are easily rolled on this low conveyance. At the bottom of the haul-up the logs are dumped on a car which ascends from the pit by means of a chain pull operated by a lever. Arriving in the mill the logs are rolled on a convenient deck and from there go on to the carriage, a nigger operated by friction assisting in the operation. The carriage, which is of Waterous build, is capable of accommodating timber up to 30 feet in length. It has hand set works with friction drive and three head blocks equipped with recede spring control.

One feature of the well-lighted mill is that every part of the equipment is electrically driven by individual motors, Hydro power being used. The circular saws are driven by 75 h.p. motor. The

Loading by means of gin pole, block and tackle, a car of hardwood logs for the Oldrieve sawmill at St. Thomas, Ont.

The last of the whitewood logs in Dunwich Township, Elgin County, being conveyed to the Oldrieve sawmill in St. Thomas. These huge specimens were recently converted into lumber and no more whitewood trees are available in Southwestern Ontario

lower saw is 58 inches in diameter and the upper, which is used in cutting up exceptionally large logs, is 44 inches across. Both inserted and solid tooth saws are used. Mr. Oldrieve personally looks after the sawing end, as he believes that by a close scrutiny of the timber and expert cutting, as head sawyer he can effect a considerable saving. He is also an experienced cruiser and when he buys a bush, he has a good knowledge of what timber it contains and about how many feet he will be able to get out of the tract purchased.

#### The Last Whitewood Logs Sawn

One kind of timber, of which the last specimens were lately sawn in the mill of Mr. Oldrieve, is what is known as whitewood (yellow poplar). The logs were obtained from Dunwich township, near Dutton, and measure from 36 to 44 inches in diameter. This timber which has a deep heavy, V-shaped bark, is the only tasteless wood known. Whitewood lumber has been used for many years by confectioners, bakers and others for the production of receptacles and utensils employed in connection with their products as it imparts no taint to the contents. Now that the supply of whitewood in Western Ontario is virtually exhausted, it is stated that some concerns, such as the Fletcher Mfg. Co., Glencoe, who for years have bought large quantities of whitewood from Mr. Oldrieve, may have to fall back on American poplar. Accompanying this reference is shown a photograph of some large whitewood logs which were taken out last winter by Mr. Oldrieve.

In reference to whitewood, Mr. Oldrieve remarks that in the early days of Elgin County it was used extensively in building and made the finest sash for houses, verandah posts, etc. The durability of the lumber was wonderful. It was also employed largely for interior finish, as years ago nearly all inside woodwork was grained. Whitewood would stay in place and took paint very well. For store shelving or drawers in any furniture, nothing better than whitewood was ever known in that section of Ontario, and it was about the first timber along Lake Erie that a mill man could sell in the American market. In the early days they exported it to England in the form of square timber.

#### Plant Driven Entirely by Electricity

But to return to operations at the sawmill—the slabs from the logs go to the slab saw which is run by a 15 h.p. motor. The boards, which require edging, are transferred to a one saw edger which is conveniently located and run by a 10 h.p. motor. Another motor of the same power runs a 26 inch swing trim saw. All the lumber

which does not require edging, goes direct to the lumber car at the north end of the mill.

The slabs are cut, mostly in 12 inch lengths and deposited into a dump car which serves as a hopper. When the car is filled it is run down a track and, with revolving sides and bottom, is soon released of its contents, and returned to its starting point by means of a chain pull. It may be stated here that, not only is a large business done in slabs, which are sold for \$3.00 a load delivered, but considerable cordwood is also disposed of.

In logging operations trees, that are unfit for lumber, and large limbs are brought in. By means of a butting saw they are cut up into various lengths for fuel consumption. Wood during the past winter, owing to the scarcity of coal, was in active demand in St. Thomas.

#### Converts Low Ends into Fish Box Shooks

No. 3 common hardwood lumber, for which there has not been much demand except at very low prices during the past two years, is converted by Mr. Oldrieve into fish box shoos of the thickness of  $\frac{1}{2}$  inch. Each regulation fish box is 32 inches long, or 40 inches including the handles, 10 inches deep and 18 inches wide. The work of cutting out the bottoms is done by means of a sizing saw, with gauger bar. Any width can be cut from  $2\frac{3}{4}$  inches to 10 inches. For the tops and bottoms of the boxes several pieces of thin lumber may be used from 4 up to 10 inches in width. Many thousands of box shoos are turned out each year and a rapidly-growing trade in this line has been developed.

For delivering wood two Ford trucks are used while for hauling logs from the country to the mill a large Acason truck and trailer is brought into service.

Mr. Oldrieve disposes of his lumber principally through wholesalers except some special lines, such as the whitewood, already spoken of, which is sold directly to confectionery and bakery equipment firms. Much of the lumber obtained from whitewood is 22 inches wide and sawn  $1\frac{1}{2}$  inch in thickness. The trees grow to a height of 50 to 80 feet.

There are about seventy factories in South-Western Ontario using hardwood lumber for various articles and thus the demand is reasonably steady and conservative.

Mr. Oldrieve is an enthusiastic lumberman and a live citizen of St. Thomas. He is a member of the Executive of the Chamber of Commerce and took an active part in the "Made-in-St. Thomas Exposition" which was held over a year ago, with splendid results.

(Continued on page 59)

# Lumbermen Wish Sales Tax Act Simplified

## Influential Delegation Visits Ottawa and Presents Strong Memorandum— Character of Lumber Business is Entirely Different

At the suggestion of the Montreal Lumber Association, the Montreal Wholesale Lumber Dealers' Association, and the Montreal Retail Lumbermen's Association, the Canadian Lumbermen's Association convened a conference at Ottawa on May 31, to consider the Sales Tax in its relation to lumber industry, and the advisability of making further representations to the Government. Those who were primarily responsible for the conference believed that an effort should be made to agree upon some scheme which would represent the views of, at any rate, the majority of those interested in the lumber industry.

All sections of the industry were represented, as will be noted from the following list of names of those attended: Messrs. A. E. Eckardt, the R. Laidlaw Lumber Co., Toronto; G. P. Davidson, the James Davidson's Sons Co., Ottawa; E. R. Bremner, W. C. Edwards Co., Ltd., Ottawa; E. M. Barrett, Ottawa; J. W. Smith, Colonial Lumber Co. Pembroke; A. L. Eastcott, Pembroke Lumber Co., Pembroke; R. G. Cameron, Cameron & Co. Ltd., Ottawa; D. H. McLennan, McLennan Lumber Co., Montreal; J. A. Story, Story Lumber Co. Ltd., Ottawa; J. S. Bock, Eagle Lumber Co. Ltd., Montreal; J. P. Dupuis, J. P. Dupuis, Ltd., Montreal; W. Rutherford, William Rutherford & Sons Co. Ltd., Montreal; O. Page, Cardinal & Page, Montreal; W. A. Filion, E. H. Lemay, Montreal; J. B. White, Riordon Company, Montreal; W. T. Mason, Mason, Gordon & Co. Ltd., Montreal; M. T. Raymond, Spanish River Lumber Co., Toronto; S. C. Thompson, Gatineau Company, Ottawa; E. B. Day, Federal Lumber Co., Toronto; P. C. Walker, Sheppard and Morse Lumber Co., Ottawa; W. M. Ross, J. R. Booth, Ottawa; R. R. Williams, Williams Lumber Co., Ottawa; J. Stratton, Rideau Lumber Co., Ottawa; J. A. Bonneau, Millen & Frere, Montreal; Arthur H. Campbell, Campbell, MacLaurin Lumber Co., Montreal; C. McDonald, Fesserton Timber Co. Ltd., Montreal; F. H. Stearns, F. H. Stearns & Co., Montreal; Alb. J. Smith, Alb. J. Smith Lumber Co. Ltd., Montreal; J. C. Bartram, Ottawa. T. Hawkins, secretary of the Canadian Lumbermen's Association, and R. L. Sargent, manager of the Transportation Bureau of the Association. The delegates represented the Canadian Lumbermen's Association, the Montreal and Toronto Wholesale and Retail Associations, and the British Columbia Wholesalers Lumber and Shingle Association.

The conference, which lasted the entire day, was presided over by A. C. Manbert, (Canadian General Lumber Co., Toronto). The delegates discussed the Sales Tax from many angles and examined schemes other than the one proposed by Mr. Fielding, going into details as to how they would work out. The representatives criticized the proposed licensing scheme as likely to prove costly and as too involved for smooth running. One suggestion that failed to meet with approval, was to the effect that the 6% be levied on sawn lumber as it leaves the mill and on all importations of lumber. As this lumber is absorbed or incorporated into a further manufactured article, an additional 6% be paid by the manufacturer of that article, who, however, is to be allowed, in computing the Sales Tax to the Government, to deduct the amount of the 6% tax on the cost of the raw material. The Government will thus receive 6% on the finished manufactured product. The conference held that the system was too complicated and was not suitable for the lumber trade.

### Consideration of Mr. Bock's Proposal

The representatives also considered the proposal put forward by Mr. J. S. Bock, and referred to on another page. This, briefly, was that the mill pay the tax, passing it on to the wholesaler or consumer as a separate charge. No further tax is to be paid except where the name and nature of the commodity is changed by re-manufacture, when a further tax will be collectable. Under this plan, no tax will be payable on sashes and doors and on milled and dressed lumber.

Other delegates strongly urged that the Government be asked to allow the tax to remain as at present—3% collected at the mill, chargeable to the wholesaler as a separate item. Ultimately, it was decided to approach the Government with a request to this effect, the plan proposed by Mr. Bock being adopted as an alternative.

The following committee was appointed to wait on Mr. Fielding and put the proposal of the conference before him: Messrs. Manbert, McLennan, Bock, Dupuis, Eckardt, Barrett, Ross, Day, Rutherford and Hawkins. The deputation saw Mr. Fielding in the evening, Mr. Manbert speaking on behalf of the members. The Minister of Finance was non-committal, but stated that he was open to suggestions. He further stated that if the deputation desired to further argue their case they might see Messrs. R. R. Farrow, Deputy

Minister of Customs and Excise, and J. A. Russel, of the Finance Department. The committee met next morning and deputed Messrs. Manbert, McLennan and Hawkins to see these gentlemen. They accordingly did so, and reiterated the arguments placed before Mr. Fielding. The main contentions of the deputation are summarized in the following memorandum, which has been submitted to Mr. Fielding.

### The Memorandum to Mr. Fielding

As directed by you, the committee representing the various branches of the lumber trade in the Dominion rehearse herein in brief the representation verbally made to you regarding the proposed changes in the Sales Tax Act. We understand that these changes are inspired by the following considerations.

- (1) A wish to simplify the enforcement.
- (2) A determination not to increase the total revenue from the Sales Tax.

We are in entire sympathy with both of these attitudes but after careful investigation we find that the proposed Act as applied to these, in respect to the lumber trade is positively inoperative. We recognize that as an abstract proposition the theory of taxing at the source is plausible and appealing. We realize that there may be certain trades which approximate very nearly an ideal condition for enforcement, a condition wherein the various stages in productive, procedure and distribution are regular and orderly in practice, and definite and conclusive at the various stages; further, that these conditions are common, simple and uniform in the habit of that trade.

To illustrate; in the shoe trade the steps are from tanner to the manufacturer and then to the retailer, either through a jobber or direct. The article is complete when it leaves the manufacturer and no further changes, remanufacture, alteration or partition can be possible.

The character of the lumber business is entirely different. No two boards are exactly alike. Wide variations in value come out of the same log. Two boards may come out of a log, one worth \$200.00 and the other \$10.00 per thousand. The practices in distribution of these products are varied and complex. The agencies are equally so. The saw-mill manufacturer may be a wholesaler and a retailer as well; a primary manufacturer may be also a retailer and a secondary manufacturer; a wholesaler may be both retailer and secondary manufacturer as well.

### Would Lead to General Mix-up

We understand that, under the proposed Act, an article which is further manufactured and on which a tax has already been paid must maintain its identity in respect to the tax so paid to provide for adjustments by way of refund. This is impossible in the lumber business.

A unlicensed wholesaler may buy from a mill, a mill run cut at an average price which he may take to a yard and afterwards assort into various grades. He may repeat this procedure from other manufacturers wherein the prices will differ according to the mill run average, or from some other wholesaler who will sell parts of his mill purchase on other basis of prices. Out of the assorting of these purchases, he may accumulate one pile or carload of a certain grade. He may sell or ship the best 80% of this accumulated grade to a piano manufacturer or a furniture manufacturer who will use the article in various ways in his processes. This simple illustration will readily demonstrate that it is impossible to determine what tax was originally paid on this lumber.

This is but one of the countless illustrations which can be given of practices which are common in kind though varied in degree, but which can hardly be understood or imagined by one who is not conversant with the regular technique and practice of the trade.

We can show by these illustrations that the course of lumber from log to ultimate consumer is probably more varied, irregular and complex than that of any commodity and that, in its distributive experience, the product of a log is constantly being arbitrarily divided, reclassified, partially remanufactured and all in general adjustment to a range of

use, which is probably wider than that of any other commodity.

#### Continue the Tax Now in Force

We can abundantly prove by illustration that exact fulfilment of the proposals of the new Act is absolutely impossible. To even approximate them will involve a tremendous amount of added cost in administrative expense on the industry; will involve calculations and executive determinations that will be embarrassing and restrictive in trade procedure and that will entail added expense and annoyances upon the Government in administrative rulings and enforcement.

We, therefore, appeal to you most earnestly to abandon the proposal and to continue the Act now in force. The

Government has announced that it does not intend to increase taxation. This proposal even if workable would lay a heavy and added burden upon the lumber business directly and indirectly. A fundamental canon in economic thought within the British Empire is the freest possible access to raw materials essential to the key industries of the country. The welfare of Canada is peculiarly concerned in the developments of her natural resources. Lumber is one of the greatest of these.

We make these representations to you not from pride of opinion nor partisan preference. They are made only because of absolute necessity. We must have relief from the announced intentions.

## Westerners Want Sales Tax Left Unaltered

The B.C. Wholesalers' Lumber & Shingle Association have sent a communication to Mr. Fielding heartily approving the stand taken that the present sales tax be left unaltered, and stating, in their opinion, the new tax and method of collecting the same will be very costly, unworkable and unfair. The Western wholesalers do not sell 50 per cent. of their sales to licensed manufacturers or other licensed firms. They would, therefore, be absolutely unable to compete with the mills or licensed wholesalers selling to such licensed manufacturers.

#### Should Collect from Manufacturers

The following is a copy of a letter sent to Mr. Fielding by the Secretary of the Montreal Wholesale Lumber Dealers' Association.

"I am directed to forward a copy of the following resolution passed by the members of our Association—

After a careful study of the proposed Tax Act, the Montreal Wholesale Lumber Dealers' Association are of opinion that the operation of the lumber business under the system of licensed and unlicensed wholesale and retail dealers and manufacturers is so full of difficulties as to be inoperative; and we suggest that this feature be eliminated from the Act, and that instead it be made to read that the sales tax decided upon shall be collected from the sawmill manufacturers, by the Government and be shown by the manufacturers as a separate charge on all invoices for lumber sold for use in Canada. Also that no further tax be imposed on rough or manufactured lumber used for building purposes."

#### What Retailers Would Like to See

The following is the resolution passed by the Montreal Retail Lumber Dealers' Association, and sent to Mr. Fielding:

"Realising the fact that it is the desire of the Government to change the taxation in force at present, it will be agreeable to our Association that the Government make a tax of 6% on the lumber business, and that the said tax be collected at the source of production either on the purchase price or as a separate item on the producer's invoice. As the largest part of our members are doing a dual business, that is a retail lumber yard and a sash and door factory in connection, using the same administration for both departments, they being under the same supervision and same book-keeping system, it would place us to heavy expense and a lot of inconvenience if a further tax is imposed on the re-manufacturer. Our association desires to place itself on record to our Government that whatever tax they impose on lumber be collected at the source of production."

#### Sales Tax Plan Which is Simple

The Montreal correspondent of the "Canada Lumberman" writes:

The Sales Tax has been the subject of caustic criticism by representatives of many industries, particularly in relation to the method of collection, which is so complicated that there are still doubts as to how it will work out. The Finance and Customs Departments at Ottawa have naturally received protests, both verbal and written, by those affected by the scheme, the main ground being that the regulations will involve needless expense to the country and to those who have to pay the tax. These regulations are so framed as to call for the employment of an army of Government servants and a large clerical force by the tax-payers. The regulations are, in fact, very complicated, and were evidently drawn up by men who know little or nothing about the practical side of business life.

Some of the industries have submitted amendments and counterplans, with a view to simplifying the proposed method of collection. Mr. J. S. Bock, of the Eagle Lumber Company, and the chairman of

the Montreal Wholesale Lumber Dealers' Association, has suggested a scheme which, at least, has the merit of simplicity. It is not perfect, but then, it is almost impossible to devise a plan dealing with taxes of this character which is not open to some objection.

Mr. Bock's proposal has special reference to the lumber trade. His idea is that a mill should pay the tax of 6% and pass this on as a separate charge to the wholesaler or other customer. When the lumber is re-manufactured in a form which involves a change in the name and nature, an additional tax will be payable. For example, should lumber be converted into furniture the mill will pay 6%, and the furniture manufacturer an additional tax on the total cost of the finished product.

The objection to the scheme is that the tax is paid twice,—once by the mill man on the raw material, and again by the furniture manufacturer on the finished product. The Government will thus be receiving a double tax, although part of it will only be on a portion—the raw material—of the finished commodity.

The principal argument in favour of the plan is that the tax will be easily collected, and that the cost to the Government and to those who pay the tax will be very small in comparison with that, under Mr. Fielding's proposal. The amount saved will offset the double tax payable by the re-manufacturers of lumber.

Lumber which undergoes dressing and milling, sashes and doors, will be excluded from the additional tax, being classified as raw material. The essential point of the plan is that no second tax is chargeable unless the lumber is re-manufactured so as to be a different commodity. Mr. Bock's scheme has, at any rate, all the elements of a workable plan, free from many of the serious drawbacks of Mr. Fielding's regulations.

#### Montreal Wholesalers Talk Over Tax

The Sales Tax was the main subject for discussion at the monthly meeting of the Montreal Wholesale Lumber Dealers' Association held recently, at the Mount Royal Hotel, under the presidency of Mr. J. S. Bock.

The subject arose out of a conference held in Montreal between wholesalers and retailers to consider this matter, and also out of a letter received from Mr. R. P. Shannon, president of the British Columbia Wholesalers Lumber and Shingle Association. The British Columbia Association is in favour of the tax being paid by the mill, Mr. Shannon pointing out that, under the Government scheme, the cost of collection is likely to be excessive. His own view was that the Government should collect the tax in all cases from the source except where the lumber was sold to a manufacturer for re-working, and the Government desired the tax on the manufactured value of the ultimate product.

The discussion was taken part in by the chairman, Messrs. A. Campbell, Page, Rolland, A. J. Smith, and others. The chairman remarked that, under the scheme as proposed by the Government, the tax would be very costly to collect, and would also involve a considerable expense on the part of firms who paid the tax, inasmuch as it would involve additional trouble, book-keeping, etc. He suggested another method which he believed would work out more satisfactorily, as it was not of such a complicated character. It was that the mills should pay the tax of 6%, and that a further 6% should be paid when the lumber was re-manufactured into such articles as pianos, furniture, etc. Such lumber as was required for construction purposes would be exempt from this additional 6%. This scheme involved the tax being paid on the raw material, and again on the finished commodities, but he held that, in the end, the proposition would prove more practical than the Government plan, and would save money, both in collection and to the firms concerned. After all, the public would have to pay eventually.

The following resolution was passed: "This meeting is of opinion

that the Sales Tax of 6% should be paid by the saw-mill manufacturers, and that no further tax be paid except in the case where the process of re-manufacture changes the name and nature of the commodity, when a further tax be paid. It is understood that the dressing and milling of lumber, as provided in the present law, is not to be considered as changing its nature."

The names of Messrs. Buchanan, C. Villiers, and A. H. Camp-

bell were added to the Entertainment Committee to make arrangements for the proposed golfing tournament, for which a cup has been offered by the "Canada Lumberman."

A letter was received from the Province of Quebec Retail Lumber Dealers' Association on the subject of the relations between wholesalers and retailers, and it was decided to arrange a conference between the two associations at an early date.

## Why Lumber Cannot be Adjusted to New Tax

A. C. Manbert, who along with A. E. Eckardt, was the representative from Toronto at the conference of lumber manufacturers, wholesalers and retailers held in Ottawa on June 1st, which passed a unanimous resolution urging the Minister of Finance to abandon the proposed new sales tax and continue the act now in force, has sent an important communication to Mr. Fielding on behalf of the deputation. The letter explains how involved and intricate the proposed new sales tax is and outlines specifically some of the difficulties which would be found in giving the new measure practical application. Mr. Manbert presents the situation in a clear and convincing manner and the subjoined letter will well repay a perusal.

Toronto, June 7th, 1923.

Hon. W. S. Fielding, L.L.D., D.C.L.,  
Minister of Finance, Ottawa.

Sir:—We crave your further consideration. It is so highly important that you possess an intimate knowledge of the features which make the proposed Sales Tax unworkable in the lumber trade, that we venture added illustrations to supplement our interview of May 31st and letter of June 1st. These illustrations are not exceptional, but are typical of daily and continuous procedure. To this end we will set forth various parties regularly concerned in the trade, showing their status. We will present the conditions under which business would originate at the source of primary production, and we will give a few illustrations of the working out of various transactions.

### "Characters"

George Gordon & Co., Lumber Manufacturers, Licensed.  
Union Lumber Co., Wholesale Lumber, Unlicensed.  
Barton Lumber & Supply Co., retail lumber, Unlicensed.  
D. Aitchison & Co., Retail Lumber (Mfrs. Sash and Doors and Cabinet Work) Licensed.  
Ontario Box Co., Manufacturer Boxes, Licensed.  
International Harvester Co., Manufacturer Machinery.  
Uses lumber for Products, Crating, Patterns and Flasks, Plant Repairs, Licensed.  
Wood, Alexander & James, Wholesale Hardware, Unlicensed.  
R. Laidlaw Lumber Co., Wholesale Lumber, Retail Lumber, (Mfr. Sash and Doors and Cabinet Work) Licensed.  
Graves, Bigwood & Co., Lumber Manufacturers, Retail Lumber and Supplies, Licensed.

### "Argument"

Geo. Gordon & Company, (Licensed Mfrs.) sell to Union Lumber Company, (Unlicensed Wholesale).

1,000,000 ft. "Mill Run" at an average price of \$50.00. This stock is graded and piled as it comes from the mill, as follows:

Good Sides, worth, say, \$135.00.  
Cuts, worth say, \$90.00.  
Common and Dressing, worth say, \$45.00—\$60.00, according to different widths.  
Box, worth say, \$35.00—\$42.00, according to different widths.

In reality there are many more sub-divisions, or "grades," but the foregoing are the principal ones.

Gordon & Company, (Licensed Mfrs.) sell to Laidlaw Lumber Company 1,000,000 ft. Culls at an average price of \$25.00. This stock is likewise graded as it is piled. 10 x 12" No. 1 Culls, worth say, \$36.00; Sidings No. 1 Culls, worth say, \$32.00; 10 x 12" No. 2 Culls, worth say, \$25.00; Sidings No. 2 Culls, worth say, \$20.00; Promiscuous No. 3 Culls, worth say, \$12.00.

In the case of Union, the Sales Tax is either charged or added in the price; in the case of Laidlaw, it is "Passed on" under license.

### "Illustrations"

No. 1—Union (Unlicensed) sells Barton Lumber & Supply Company (Unlicensed) 1 x 4" Common and Dressing.

Tax was paid (or dealt with) at source. No further Tax. This is an ideal operation.

No. 2—Union (Unlicensed) sells Aitchison (Licensed) 1 car Good Sides at say \$135.00. Aitchison assort say as follows:

Best 80% for Special Pattern Trade. This goes into "Stock" and it may be two years before it will all have been sold out, depending upon the activity of his trade.

Poor 20% for his manufacturing dept. This last lot being "liners" and close in value to "Cuts" (the next grade poorer)) which he usually buys for his manufacturing dept., he piles upon "Cut" piles for economy of yard room. The identity of this 20% will be merged into other stock and lost, but ultimately it will doubtless be used in manufacturing dept. although some portion of it might be sold manufactured.

Assuming that Aitchison uses the poorest of it to make into "Trim" and the best of it to make store or office 'Fittings,' how will the Tax "rebtable" be arrived at to reduce manufacturer's cost, and to avoid pyramiding? The best 80% or some portion of it he sells to International Harvester Company (Licensed). The best of this, they put into "Harvesters"—the poor end into patterns, or "vice versa." The portion going into machines will collect a Tax from purchaser and will be subject to rebate. The other portion may conceivably be ruled to be a part of manufacturing expense, like coal, oil, etc.

The lumber originally paid Tax on basis of \$50.00 Per M'. How will this be dealt with considering the different price at which it was sold to Aitchison and the redvisions in his or subsequent hands?

No. 3—Union (Unlicensed) sells to Ontario Box Co. 1 x 6" Box (out of same lot) at say \$35.00. Tax has of course been paid on this lumber at average price of \$50.00. Laidlaw (Licensed) also sells Ontario Box Co. 1 x 4" and up No. 1 Culls at say, \$32.00. Tax has not been paid on this. Ontario Box sorts 6" out of Laidlaw purchase and with the 1 x 6" from Union Stock, makes boxes for Wood, Alexander & James, who pay Tax. Ontario Box Company is entitled to rebate on such stock at once from Union, but clearly not at \$50.00 (the price on which Tax paid by Union was based).

No. 4—Aitchison (Licensed) makes Sash from "Tax paid" stock. He sells to Graves, Bigwood & Company (Licensed) who must therefore collect Tax when sold. Graves, Bigwood & Company, retail to consumers; how trace the Tax back to Union Lumber Company?

As suggested before, these illustrations are not strained or unusual. They are regular and in varied forms, common and inevitable in trade practice. They rest upon the fact that every board has an individuality which inspires regarding and manipulations at the hands of every agent through whom it travels to its ultimate use.

We sincerely hope that you will be good enough to understand that the lumber trade does not cavil at difficulties which can be overcome. Its objection is that the lumber business rests on fundamentals which cannot be adjusted to the new proposals of the Sales Tax.

We do not attempt in this to touch upon the doubtful policy of doubling the Tax on lumber to the detriment of the building industry and the settlement proposals in the West, in which lumber plays such an important part. The subject presents a vast array of objections which we cannot elaborate and properly emphasize and keep this letter within modest limits. We do, however, place ourselves at your disposal for inquiry and information. We are loath to believe that in the face of opposition which has such genuine justification, you will enact legislation that will be so totally unfortunate and fruitless of good.

I have the honor to be Sir,

Your obedient Servant,

A. C. Manbert.

## Deepening River Channel to Float Logs

Dredging operations on the north bank of the Pottawattamie River have been in progress for the past few weeks and already a large amount of sand and mud deposited on the bottom of the river has been brought up and placed on the bank. The work is being done by the John Harrison & Sons Co., Limited, Owen Sound, Ont., who are large land owners in that district. The main purpose of the dredging is to provide a channel for the logs to be floated up the river to the company's sawmill a number of hundred feet from the mouth.

Last season a retaining wall of sheet piling was built for a thousand feet from the mouth of the river east to the breakwater, and when this was completed, the whole south side of the river was dredged, and the mud was placed behind the piling. This spring work on the north side commenced at the railway bridge over the river, and is being continued for a considerable distance right out to deep water. The river is being dredged to a depth of about five feet, and will allow the logs to be floated up the stream without any difficulty.

## Canadian Firms Who Are Members

The Official hand-book of the National Hardwood Lumber Association Chicago have been issued. Since the last edition over 125 new names have been added to the membership roll. The hand-book contains the names of the officers and directors of the Association, the standing committees, the outstanding inspection service, conditions of membership, articles of incorporation, special regulations, constitution and by-laws and an official list of members.

The following firms from Canada belong to the National Hardwood Lumber Association the annual convention of which will be held in Chicago on June 13-15 and will be attended by many lumbermen from the Dominion:

Gareau & Viger .....	Brunet
Fassett Lumber Co., Limited, .....	Fassett
Painchaud & Miquelon .....	Lac Sagway
Industrial Specialty Mfg. Co., Limited .....	Magog
Samuel Ouellette .....	Mount Laurier
Nap. Thomas .....	Mount Laurier
Bennett Lumber Co., Limited .....	Montreal
W. H. Cote Lumber Co., Limited .....	Montreal
Eagle Lumber Co., Limited .....	Montreal
Godfrey Company, Limited .....	Montreal
George C. Goodfellow .....	Montreal
G. A. Griër & Sons, Limited .....	Montreal
McNeil Lumber Co., Limited .....	Montreal
Montreal Hardwood Flooring & Lumber, Limited .....	Montreal
E. M. Nicholson & Co. ....	Montreal
Henri Peladeau, Limited .....	Montreal
T. Prefontaine & Co. ....	Montreal
Quebec Hardwoods, Limited .....	Montreal
Chas. H. Russell Co., Limited .....	Montreal
Wm. Rutherford & Sons Co., Limited .....	Montreal
James Shearer Co., Limited .....	Montreal
C. A. Spencer, Limited .....	Montreal
G. M. Strong .....	Montreal
Trans-Canada Lumber Co., Limited .....	Montreal
Auger & Son, Limited .....	Quebec
Roch Julien .....	Quebec
Racicot Pulp & Lumber Co. ....	Sherbrooke
J. C. Heon .....	Victoriaville
Weismiller Bros. ....	Bala
W. F. Hamlyn .....	Belmont
Hamilton Bros. ....	Chatsworth
J. A. McDonald .....	Emsdale
Goderich Mfg. Co. ....	Goderich
Long Lumber Co. ....	Hamilton
M. Martin .....	Huntsville
Muskoka Wood Mfg. Co., Limited .....	Huntsville
Percy E. Heeney .....	Kitchener
Story Lumber Co., Limited .....	Ottawa
Keenan Bros., Limited .....	Owen Sound
S. George Stone .....	Sault Ste. Marie
Anderson-Miller Lumber Co., Limited .....	Toronto
Anderson, Shriener & Mawson .....	Toronto
Atlantic Lumber Co. ....	Toronto
Robt Bury & Co. ....	Toronto
Canadian General Lumber Co., Limited .....	Toronto
Edward Clark & Sons, Limited .....	Toronto
W. T. Eagen .....	Toronto
Fesserton Timber Co., Limited .....	Toronto
Gall Lumber Co., Limited .....	Toronto
Hall Bros., Limited .....	Toronto
T. H. Hancock .....	Toronto

Russell Harris Lumber Co. ....	Toronto
Johnston Lumber Co. ....	Toronto
Kinnon Lumber Co., Limited .....	Toronto
Wm. Laking Lumber Co. ....	Toronto
Leigh Lumber Co. ....	Toronto
McBean & Verrall .....	Toronto
McDonagh Lumber Co. ....	Toronto
Oliver Lumber Co., Limited .....	Toronto
Pedwell Hardwood Lumber Co. ....	Toronto
Seaman, Kent Co., Limited .....	Toronto
John B. Smith & Sons, Limited .....	Toronto
Toronto Hardwood Lumber Co., Limited .....	Toronto
Wilson Lumber Co., Limited .....	Toronto
Wood Sales Company .....	Toronto
Joseph H. Hall .....	Waterloo
Geddes-Tyson Lumber Co. ....	Warton
Flemming & Gibson, Limited .....	Juniper

## New Mill Will Soon Start at Quebec

Independent of the export trade to the United Kingdom the Quebec lumber firms and mill owners have done an extraordinary business with the United States markets this winter and spring and the demand to meet the construction boom over the border still continues.

To meet the exigencies of this business, Mr. W. Gerard Power, president of the W. & J. Sharples, Limited, the St. Pacome Lumber Co., and an American auxiliary company, with head offices in New York City, recently organized a new company known as the Bridge-water Lumber Co., of which he is also president, to build a mill at Cape Rouge in close vicinity to the Quebec bridge, to saw and dress lumber for the American market. This mill, which will be equipped with modern machinery, will be ready for operation in the course of July, when the logs to keep it going will be transported from the Power limits by the various railways crossing the Quebec bridge from the south shore, and after being made into sawn lumber, exported to the United States.

The depletion of the United States forests by cutting and fire during the last several decades, has obligated the American lumber interests to turn to Canada these days for their supply. The selection of the site on the heights, in close touch with the Quebec bridge to meet the emergency connection of all American railways, is regarded as an ideal location for a lumber mill. It will not only have the best of railway facilities, but will also mean the revival of activities along the St. Lawrence waterfront and cove.

In the establishment of this industry, Mr. Power organized a new company, the directors of which are W. Gerard Power, president and managing-director; T. P. McCarron, vice-president, and treasurer; P. J. McGoldrick and John J. Power, directors; J. H. Tugere, secretary and director, and J. H. DesRoches, manager. The latter formerly held the same position with the Atkinson and Gravel firms at St. Romuald, and the Big River Lumber Co. in Saskatchewan, and more recently with the Power Lumber Co. and the River Ouelle Lumber Co.

The Power Lumber Co., which has met with such unqualified success since its formation in 1920, to succeed the River Ouelle Company, (which was organized by W. Gerard Power in 1902 and later was absorbed by the Power Lumber Co.,) produces 20,000,000 feet of lumber every year, from which 75 to 80 per cent. is exported to the United States.

## Heavy Demand For Lath Equipment

The E. Long Mfg. Co., of Orillia, Ont., state that they have been busy all year turning out sawmill machinery. There has been a very large demand for lath equipment in all parts of the country, and the firm have made two large shipments of this class of machinery to the Horwood Lumber Co., St. John's, Newfoundland.

The new sawmill of the Mageau Lumber Co., Field, Ont., recently started running and is now operating steadily. The principal equipment consists of an 8-foot double cutting band, a 40-inch heavy duty carriage with steam set works and a new type, heavy duty, centre drive gang edger, together with lath manufacturing equipment complete, all of which was supplied by the E. Long Mfg. Co.

A feature of the shipment of lumber to the United States these days is the plentitude of cars. During the past month or six weeks all the cars needed were available and by the middle of June all the wood ordered last winter from the Quebec mills will be transported across the border, and still orders are pouring in from the American market, and the Quebec district mills are now busy operating to meet the demand.

Linn Tractor at work in dead of winter on operation of Austin & Nicholson at Esher, Ont.

## New Ontario Firm Cuts Cost in Log Haulage

It is the aim of the "Canada Lumberman" to print from time to time interesting data that it is able to obtain from Canadian operators in connection with mill and woods activities—articles that will tend to enable the lumberman to reduce his operating costs in the bush, on the drive or in the mills. The intention is to present on the editorial pages details which are gathered from various parts of Eastern Canada.

Believing that it is appropriate at the present juncture the "Canada Lumberman" is dealing, in this issue, with the haulage problem in the woods. As a basis for the article, first-hand information has been received from one of the most practical and widely known lumbermen in Ontario. This gentleman is George B. Nicholson, president of Austin & Nicholson, Limited, of Chapleau, Ont., who has been engaged in the lumber business for nearly a quarter of a century. His firm operates mills at Nicholson, Dalton and Devon, Ont., and are extensive producers of rough and dressed lumber, lath, railway ties, pulpwood, etc.

Mr. Nicholson has devoted considerable attention to logging operations, costs and output, and his firm installed a Linn Logging Tractor last Fall in their operations Southwest of Esher, Ont., with the result that they have effected a great saving in their haulage costs by this tractor under the cost by horses during the past season.

In a recent interview Mr. Nicholson confessed that he had been studying for years the question of using some mechanical means to lessen the cost of logging operation, and during that period had investigated many different types of tractors.

Steam log haulers at one time promised to be an effective instrument for this purpose, but conditions prevailing involved the hauling of logs across marshes and small lakes and made it extremely difficult and very expensive to build a road on which steam log haulers or other heavy tractors could be operated. Last year, after careful consideration and thorough investigation, Austin & Nicholson put in their operations Southwest of Esher, a Linn Logging Tractor, operated by a 4-cylinder gasoline engine, developing approximately 90 h.p. The total weight of this machine is approximately 10,000 lbs. To put this in operation they equipped their ordinary logging sleighs with a patent casting on the nose of the runners and a gudgeon in the ends of the rollers and cross chain from gudgeon to rear bunk of sled.

The method operated was to employ teams to take the sleighs in on the side or branch roads, where the skidways were located, load the sleighs in the usual way with jammers and forward the logs with teams out to the main road where the tractor made up the trains and hauled them to the dump. It required about a minute to change the roller so that the team could take the sleigh and leave the loaded sleigh for the tractor. The time required for the tractor to couple up a train of from five to ten loaded sleighs, was about five minutes.

The road over which this tractor operated was the usual iced road that would nominally be provided for horse haulage, and was, at the extreme length of the tractor haul, seven miles in length, the average distance being about five miles.

The number of logs transported by the tractor last winter was 126,000 pieces of jack pine and spruce; these logs being 16 feet in length. The cost of operating the tractor, including two operators and two men to assist in coupling the sleighs, etc., gasoline, oil and depreciation on the machine, was in round figures \$65.00 per day. On the operations last season the tractor replaced fifteen teams of horses.

### Will Save Operator Much Money

Mr. Nicholson declared that he did not mean to suggest that they got 100% efficiency out of the machine on this operation. In fact, he says he knows they did not. Their method of loading was slow and they had some difficult pitches in their side road which required the use of trace teams to forward out the loaded sleighs and, therefore, the tractor was idle each day a considerable length of time due to the fact that sleighs were not brought out with sufficient speed. It was an experiment with Austin & Nicholson and they were testing as many ways as they could to see what could be done with the machine.

"We were," continued Mr. Nicholson, "to speak frankly, a little apprehensive, owing to our having a fairly large quantity of logs to convey a long distance, and not caring to take any chances. The result generally has been to convince us that in an ordinary logging operation where the main haul is three miles or over in length, a Linn Logging Tractor will save the operator a substantial sum of money. Our purpose is to develop it so that it will do the snow ploughing and tanking as well as log hauling, and it may be that we will use a tractor on our side or branch roads as well as on the main roads."

"As against horses, taking into account wages, feed and depreciation, we figure that we saved \$75.00 every day that the tractor worked, and we are confident that it is capable of much better results with a little more experience in its operation."

Mr. Nicholson went on to say that his maximum loads during the season (and his hauling season extended from about January 20th to March 20) consisting of a ten sleigh train with 1004-16 ft. jack pine logs. He estimated the weight of the load, including sleighs, to be approximately 250 tons. This load was hauled over a distance of six miles and, on four of these miles, it had a dead lug of  $4\frac{1}{2}\%$ , yet it never hesitated in moving this wood from the time it started until it reached the dump. He further said that it is his ambition next year, with this one tractor, over the same haul, to move an average of 4000 logs per day of ten hours. This is equivalent to 1000 logs per train on a four trip day.

Another view of the Linn Tractor showing large amount of logs hauled at single trip

## Gigantic Industry for Port of Montreal

The first consignment of a total of 40,000,000 feet of British Columbia forest products to be brought to Montreal during 1923 by the water route (via the Panama Canal), reached the Canadian commercial metropolis recently when the steamer "Heathfield" arrived in port. The shipment was made by Knox Bros. Limited, of Vancouver, to the British Empire Lumber Corporation, Limited, of Montreal. The latter firm have just completed the erection of a huge timber shed, planing mill and cutting-up plant at Bickerdike Pier at a heavy outlay. The British Empire Lumber Corporation, of which J. B. Knox, of Montreal, is president, plan to furnish eastern consumers with B. C. lumber on only a few days' notice instead of several months which it formerly required when the product was shipped direct to the consumer from the Pacific Coast.

In the last issue of the "Canada Lumberman" on page 3 a splendid picture of the SS "Heathfield" which was the first steamer this season to unload B.C. wood products in Montreal, was shown with a cargo of 5,000,000 feet of Douglas fir timbers, fir and pine lumber. It is anticipated that about 40,000,000 feet will reach Montreal this season by the water route, eight vessels being engaged in the service. The distance from Vancouver to Montreal by way of the Panama Canal is some 8,000 miles, and the time required for a consignment of lumber on the large steamer to reach its destination is about four weeks. The British Empire Lumber Corporation will carry a stock of about 15,000,000 feet of B.C. fir, cedar, pine and white spruce, and the new plant, which has just been completed, will be kept busy all summer. The next vessel to arrive at Montreal will be the "Margaret Coughlan," with a full cargo. The combined carrying capacity of the "Heathfield" and "Margaret Coughlan" is, approximately, 10,000,000 feet. J. B. Knox states that several other loaded vessels will leave Vancouver this and next month for the Montreal yard of the firm, and they expect to have, at least, one or two sailings per month during the balance of the season.

The new sawmill and planing mill of the firm is now in operation. Work on the buildings has been going on since last fall and the plant has a handling capacity of about 15 cars of lumber per day with a storage capacity of, approximately, 2,500,000 feet of dry lumber. There will be a complete dry kiln equipment for drying all classes of forest products, in addition to other installations of a most up-to-date type.

The rail and water shipment facilities are unsurpassed and there are sets of overhead travelling cranes to carry the lumber and timbers from the ships. The new mill is built of reinforced concrete and possesses every manufacturing and other convenience, being fitted with a sprinkler system throughout. The company have also storage yards adjacent to their mill, which will have piling facilities for about 25,000,000 feet.

A full description of the enterprise and development of the British Empire Lumber Corporation will appear in a later edition of the "Canada Lumberman."

## Grade Marking Machine in Operation

While Canada has not decided upon a uniform grading of lumber it is interesting to follow the progress in this direction made by organizations to the south. Uniform grading has been in practice by the Southern Pine Association, National Hardwood Manufacturers Association and other less prominent bodies for several years. With the tremendous volume of business turned over by manufacturers each year it was inevitable that some device should be invented to semi-automatically mark the different grades on the boards.

This machine to grade mark lumber, after several years experiment, has been perfected and was recently demonstrated at the Southern Pine Manufacturers Convention. The device was invented by J. G. McDonough, of Eau Claire, Wis., who is a graduate of the University of Wisconsin. He is credited with having invented several other machines used in the lumber manufacturing industry.

Among the advantages claimed for the grade-marking machines are the following:

1. They are simple of design and can be installed in any plant over-night without hindering operation of the plant.
2. They entail no additional cost for labor and in some plants will reduce labor costs.
3. Use of the machines gives a better chance for the grader's inspection of the lumber and will effect greater efficiency in grading.
4. The machines mark the grade name on the lumber indelibly so that it cannot be effaced or changed.
5. Each piece in bundle-stock also is branded.

The specific machine which was selected for the public demonstration is known as machine No. 1. This is portable apparatus, mounted on a low truck so that the machine may be moved about and used in any part of the plant or yards.

Machine No. 1 can be used back of the planers, with slight modifications, or made portable on trucks for branding while loading

behind the planers in the mill, a quadrant and set lever instead of a wheel is used for regulating and positioning the grade names opposite the surface to be branded. Such a machine, with transfers mounted with the machine, successfully branded the varying grades of flooring from two "matchers" recently and saved employment of one grader.

Machine No. 2 is designed for attaching to the planer in the mill and it brands the name "Sou Pine Assn" on the lumber as it feeds out. This machine can be instantly swung out of the way on a pivot, so that the operator of the planer, in setting up his machine, can have a clear view through the planer to adjust his knives and side guide. This machine is capable of branding lumber fed through the planer at a feeding speed far beyond that of any planer. This apparatus brands only on the end.

Machine No. 3 is designed for branding the grades on lumber back of the edger, re-saws and slow-feeding planers. With modifications it also can be installed for grade-marking of lumber at the sorting chains back of the planer or trimmer. Its hand wheel or lever shift for positioning the names opposite the surface to be branded operates practically on the same principle as that of machine No. 1.

All three of the grade-marking machines are designed to be used in various places around a lumber manufacturing plant wherever it is most convenient to have them placed.

## Fraser Valley Sawmills Are Active

All the sawmills in the Fraser Valley, B.C., are very busy at the present time. There is scarcely a mill in each of the various municipalities, especially on the south side, that is not operating full blast. Some concerns, which have not been running for years, have started up, as well as a number of entirely new ones. Practically all the plants are engaged in cutting second-growth timber for which there is still a considerable quantity scattered over the valley. As the logging progresses the available timber becomes further away from the mills, and to handle these logs more economically, some firms have lately laid steel from the scene of their logging equipment to their sawmills, superseding the old methods of hauling over skid-roads with horses.

With the increased demand, the price of standing timber has mounted accordingly until, at present, it is practically at a premium. Ties and dimension are the principal products being turned out by the mills, much of the timber not being of sufficient size to be suitable for other purposes. Several settlers in the Fraser Valley have turned their attention to taking out telegraph poles and are deriving considerable revenue from this source. There is also a good demand for shingle bolts and these are being cut by various persons.

## Some Features of Hardwood Market

Writing to the "Canada Lumberman" a leading lumber firm in Ontario states that the furniture factories are rather slack and have not been operating to anything like capacity for several months. The agricultural implement people are also quiet. Western Ontario trade, in both furniture and implements, has not been encouraging but, on the other hand, the auto trade and some building trades in American cities have been good. There are certain items, such as 2½ and 3-inch soft elm and 2-inch and 2½-inch hard maple, which have been decidedly active. A reasonably free movement in low-grade hardwood is in evidence. The stave business has not been attractive and some firms in Western Ontario have cut nearly all their elm this year into lumber. Indications are considerably brighter in cooperage stock.

## Southern Lumber is Yielding Oil

The Great Southern Lumber Company, which operates at Bogalusa, La., the largest sawmill in the world, has proved to its satisfaction that turpentine, pine oil and rosin may be extracted from yellow pine lumber after it has gone through the sawmill, and in order that it may do so on a large scale, is spending \$70,000 for the necessary equipment. The process, perfected and patented by W. H. Mason, a chemical and mechanical engineer, involves two operations. Under one process, that of heating the cut lumber, one gallon of turpentine is extracted from every 1,000 board feet treated.

The second process involves the treatment of "pitchy" lumber. Nine gallons of turpentine, one gallon of pine oil and one commercial barrel of rosin have been recovered from each 1,000 board feet so treated.

Experts here declare that removal of the turpentine, rosin and pine oil improves the grade of the lumber.

# Quebec Retailers Want Change in Lien Law

## *Declare That the Present Law is an Illusion and Affords Dealers No Protection Against Unscrupulous Contractors and Others*

The subject of the Quebec Lien Law in relation to the retail lumber trade was discussed at some length by the members of the Montreal Retail Lumbermen's Association at a recent meeting. Mr. J. P. Dupuis presided. The members are of the opinion that the law is defective, and that it gives them practically no protection against unscrupulous contractors and others, who take advantage of the law to escape payment of the lumber ordered and supplied. It was, therefore, decided to take steps to secure such amendments of the law as will give the desired protection. The law on the subject was outlined by Mr. Francis Fauteux, who attended the meeting at the request of the directors.

The chairman explained that the Builders' Supplies Bureau had formed a committee with a view to seek legislative changes in the Quebec Lien Law, and he suggested that their own association should work in co-operation with the Bureau, in order to secure those changes. Mr. Dupuis also referred to the Montreal Builders Exchange in this connection, and stated that, on a previous occasion, a delegation had gone to Quebec, but that the results had been disappointing, in that changes had been made which were not in the interests of suppliers of building material.

### Some Suggestions for Improvement

Mr. Fauteux then gave a resume of the law, and also made suggestions which, he believed, would fully protect those who supplied material for building purposes. He stated that in order to obtain protection a person or firm supplying building material, including lumber, must serve a registered notice upon the proprietor before the goods were delivered to the contractor. This notice must give the nature and cost of the material to be delivered, and the Cadestral number of the land. This notice was only effective provided that a privilege was taken out and delivered within thirty days of the completion of the building. The Lien Law provided protection for the labourer, the contractor, the architect, and the sub-contractor. Labor was privileged provided that the person issued a writ within thirty days after the completion of the building. In the case of the contractor and architect, the law provided that within thirty days after the termination of the work the contractor must take out a registered privilege of his claim, and he then had six months to enter a writ to have the claim adjudicated upon.

A sub-contractor must give notice of the sub-contract to the proprietor, and if he desired to secure a privilege, must give notice, which must be registered, within thirty days after the completion of the building. He also must take action within such thirty days.

Mr. Fauteux suggested that the retail lumber dealer would be fully protected if he were put on the same basis as the contractor and architect. Provided this were done, he could take action against the proprietor or contractor. At present, if a supply firm failed to give notice to the proprietor, his only recourse was against the contractor, and this was oftentimes of no value.

### Present Method is Cumbersome

The discussion was taken part in by Messrs. W. Rutherford, J. Shearer, G. Lebel, J. A. Lapointe, J. H. Leboeuf, J. A. Bonneau, J. N. Forest, and Beauchemin. The main point brought out was that firms, who supplied building material were in practise without protection, although the law was supposed to grant this. The method, however, was cumbersome, taking the form of notifying the proprietor that the contractor was about to be supplied with materials. This meant that notification of every order had to be given, and it was pointed out by the chairman that lumber was ordered now mainly in such quantities as were required for immediate use, involving, if protection was to be secured under the present law, a number of notices being served on the proprietors.

The result was that lumber retailers did not take the necessary steps to protect themselves, and had been caught again and again by people who took advantage of this condition. In the case of a contractor with good credit the retail lumber dealer did not feel inclined to take the precaution, because it looked as if the retailer was doubting the standing of the purchaser. If he did serve the notice the changes were that no further orders would be given. It was suggested that the retailer was entitled to the same protection as in the case where money was advanced under the Housing Act.

Referring to the question of serving the proprietor with notices, Mr. Shearer remarked that this was all right, provided that the law was amended to make it compulsory to serve the notices. In that

case there would be no loophole for resentment of such notices, as was the case at present.

Several members gave instances where supply firms had been badly hit owing to the lack of protection—it being stated that the law opened the way to collusion, and gave opportunities for the unscrupulous to obtain cheap houses at the expense of supply houses. In that connection the chairman stated that the losses had been considerable, but he anticipated that the Association's Credit Bureau would result in reducing the losses and the risks.

Mr. Fauteux pointed out that if the supply firms did not give the notices required under the Act, then recourse could only be had against the contractor.

### Material Men Want More Protection

The following resolution was adopted: That the Board of Directors be authorized to take the necessary steps with the object of amending the Quebec Lien Law, and that they act in co-operation with the Builders' Supplies Bureau to obtain the desired amendment so as to give to suppliers of material such protection as is granted to contractors, sub-contractors, architects, and labour, under Statute 7, George V., Chap. 52.

The meeting also briefly discussed the Sales Tax as it applied to lumber. The members decided to re-affirm their opinion that the tax should be collected at the source, and emphasized the point that the new plan of collection would prove onerous and expensive to the retailers and to interior trim manufacturers.

On the question of relations between wholesalers and retailers, arising out of some recent correspondence, it was suggested that small permanent committees be appointed by the wholesale and retail associations, with a view to the discussions of such questions of mutual interest as may arise from time to time.

The building supply firms, including retail lumber dealers, of the Province of Quebec have long complained of the inadequacy of the Quebec Lien Law. Whilst the law nominally gives protection to those supplying building materials, in practice the Act has proved of no value—its apparent protection is an illusion. The procedure is so cumbersome and vexatious that it is almost impossible to use it, and the law thus remains practically a dead letter. In order to protect themselves, building supply firms have to serve registered notices on the proprietors, giving the nature and cost of the goods ordered by the contractor. These notices must be served before the material is delivered. Then a registered privilege has to be served upon the proprietor within thirty days after the completion of the building. If this procedure is not followed, then recourse can only be had against the contractor—not against the proprietor.

### Its Protection is an Illusion

The Montreal Builders' Exchange has spent a considerable sum and made persistent efforts to obtain amendments giving fuller protection, but without success. It is very difficult to secure any alterations of this character without the backing of the Government. The feeling of party loyalty to the Government is so strong that private members are not inclined to introduce measures, however urgently needed, unless members are assured of the sanction of the Government—then the way is made comparatively easy. Otherwise the obstacles in the path of a private measure are formidable.

Notwithstanding the difficulties, the Montreal Retail Lumbermen's Association have decided to make a strong bid to place building supply firms on a more equitable basis in the matter of protection. The members of the Association feel that they have too long been at the mercy of men who, taking advantage of the present state of the Lien Law, have been able to obtain goods without paying for them. According to the members of the Association, the losses have been considerable, and in some instances have been incurred through collusion by unscrupulous people.

Such cases are often difficult to prove, and firms are not disposed to lose more money by commencing law proceedings. What the retail lumber dealers ask is that they be given reasonable protection, and they are of opinion that this could be secured by placing them on the same footing as contractors and architects, in relation to the liability of the proprietor for money due. The retail lumber dealers desire that the present cumbersome procedure should be abolished and a more direct plan authorized. If the Montreal Retail Lumbermen's Association can obtain this reform, it will have rendered a service not only to the members but to the entire building supply trade.

# Home That Combines Both Beauty and Dignity

A house combining all the beauty and dignity of the Colonial type of architecture is presented herewith on this page. The house is built of wide siding and in its soundness and economy of structure and its perfection of interior planning it preserves all of the best qualities of that early period of building. According to estimates of the Home Owners' Service Institute, the cost of this house should be between \$7,000 and \$9,000.

The floor plans are so drawn, as may be seen from the accompanying sketches, as to simplify greatly the problem of enlarging the house later on should that be desired. In all considered modern designing the possibility of enlargement should be considered originally and it is a decided advantage to work from plans where this has been done.

In the case of the plans shown here only two bedrooms have been indicated on the second floor. Plans are also available through the Home Owners' Service Institute in which this same design calls for four bedrooms. With four bedrooms, however it would be necessary to increase the depth of the house, making a larger living room, dining room and kitchen by increasing the length of each.

Under the plans, the two additional rooms would be added to the back on the second floor. They would be built over the kitchen wing and rear living porch.

The location of the living porch in the rear of the house instead of the front is in conformity with the modern architectural trend. More and more of the better homes are being designed so that this feature of the house is kept away from the dust and noise of modern automobile traffic.

Other attractive features of this Colonial home are:

The entrance is attractive to the eye and architecturally correct, a fact that is worth mentioning because such is frequently not the case with many so-called Colonial entrances.

The kitchen is arranged with an eye to economy of movement.

There is a convenient dressing room alcove off one of the bedrooms and excellent cross ventilation upstairs.

A trap door in the ceiling of the upper hall permits of access to storage space in the low attic. Complete plans for the house may be obtained from the Home Owners' Service Institute, No. 37 West 39th Street, New York, N. Y. A corner lot forty feet wide and eighty to 100 feet in depth would be the minimum land requirement for it.

Outline of specifications follows:

**MASONRY**—All foundation walls, piers, footings, areas, etc., to be of concrete. Chimney footings project 3 inches and to be 12 inches thick. Other footings as indicated on drawings. Columns 4-inch Lally type.

Build chimneys of common brick as shown on detail drawings; brick laid in mortar composed of equal parts lime and cement to three parts sand.

Build fireplaces as shown on details faced with best quality common brick selected for pleasing color.

**PLASTERING AND LATHING**—All walls and ceilings of first and second storeys to be covered with plaster-board 3/4 inch thick. Plastering to be two coat work and the finishing coat of plaster of Paris gauged with hydrated lime putty.

**CARPENTRY**—All framing to be full and square to the dimensions shown, well seasoned and free from imperfections; pine, spruce, Douglas fir or hemlock. Inclose all side walls with one thickness of 7/8-inch spruce or white pine and one layer of building paper put on with tin-clapped nails. Outward finish to be seasoned fine common white pine.

Inside trim to be birch not selected for color, ash, chestnut, or white pine for paint. Stock mill work should be used at owner's option. Complete details for mill work are included in architect's detail drawings.

**Hardware**—Owner will furnish all hardware trimmings for doors and windows and for closets and case work. The contractor is to furnish a correct list of the hardware and is to put it on in a careful and workmanlike manner. Rough hardware to be furnished by contractor.

**INSULATION**—In northern sections it is best to insulate all outside walls of rooms between studs with sheathing quilt; also the entire second-storey ceiling between collar beams and rafters.

**METAL WORK**—All metal work, including gutters, leaders and down-spouts and flashing, to be sixteen-ounce copper.

**ROOFING**—Cover all roofs inclosing rooms with one thickness of seven-eighths-inch spruce or hemlock shiplap and one layer of building paper. Shingle all roofs with eighteen-inch quarter-sawn red cedar shingles seven-sixteenths-inch at butt, laid six-inch to weather.

**PAINTING**—Roof shingles to have one brush coat, silver gray, creosote shingle stain. Exterior wood finish to have two coats of white lead and oil paint.

Interior wood finish to have one coat of light walnut stain, as selected by owner, and two coats of varnish.

All doors to have one coat of specified preservative and one coat of hard wax polish.

**ELECTRICAL WORK**—Wire the building complete for electric lights and service outlets as indicated on the detail plans and according to standard symbols of the National Board of Fire Underwriters.

**PLUMBING**—Provide a complete plumbing system and fixtures ready for use as shown on plans and in accordance with local regulations. Brass piping is recommended throughout for hot water distribution.

**HEATING**—Warm air heating system specified. Steam or hot water if owner desires.

## Breezy Paragraphs from Far and Near

Ernest Montgomery, representing Montgomery Bros., wholesale lumber dealers, Buffalo, N.Y., was in Toronto recently on business.

Frank A. Bowden & Sons, Greenwood Ave., Toronto, recently received six specially built trailers for their delivery service. They were supplied by the Dominion Truck Equipment Co., Limited, at Kitchener, Ont.

Damage estimated at \$18,000 was done to sawn lumber on a large tract of land which was burned over by a fire at Garnet, N.B., recently. The lumber was the property of McIntyre & Johnston and consisted of about 400,000 feet of boards and 250,000 pcs. of lath. There was little or no insurance carried on the stock.

As an indication of the fact that forest products are steadily growing in demand, Mr. Ed. Walmsley, Crown Timber Agent, New Westminster, B.C., supplies the following comparative figures representing the quantity of timber accounted for through the agency in New Westminster. During the twelve months ended March 31st 1922, the total was 82,794,875 ft. B.M. This increased to 121,966,704 ft. within a similar period ending on March 31st last. The revenue shows a corresponding increase, being \$149,546.61 and \$175,378.44 respectively. Mr. Walmsley reports the lumber business both for-

eign and domestic as retaining its buoyancy. A strong demand from the United States for cedar poles is being met.

People who through negligence of fire prevention methods, are guilty of starting forest fires in Nova Scotia, will be in danger of prosecution to the fullest extent provided in the statutes of Nova Scotia if convicted, according to Attorney-General W. J. O'Hearn. This stand has been taken in view of the forest fire conditions prevailing. Fires were raging at various places in Halifax and the Western counties, which, while they had not seriously menaced property, were threatening.

The Howard Smith Paper Mills are making extensive additions to their plant at Cornwall in the matter of unloading and conveying equipment. They are installing two 5-ton derricks operated by two 8 x 12 double drum hoists and 75 h.p. vertical boiler for unloading rossed pulpwood from boats, and have also built a system of piling out and storage conveyors. The rossed wood comes from their Gaspé plant by boat for their pulp mill at Cornwall. The complete equipment has been furnished by the William Hamilton Co., Limited, of Peterboro.

### Better Forest Fire Protection Urgent

The subject of forest fire protection has been discussed at such length that the ordinary reader is apt to become weary of it. In justification of further reference to the subject, it may be pointed out that it is only by persistent efforts that the public and politicians can be brought to realize that this country is annually losing millions of dollars owing to the lack of adequate protection. Governments rarely legislate in advance of public opinion—they have to be very forcefully shown the need of legislation before they will introduce measures.

The lumber industry is vitally interested in the conservation of our timber resources, involving, as it does, the maintenance of that industry and the various subsidiary industries which are more or less dependent for their existence on a sustained supply of lumber. The pulp and paper industry is expanding at a great rate, and it is probable that more American concerns will locate on this side of the border, with the result of a still greater demand on our pulpwood resources. But, as in the case of lumber, the permanence of that industry is absolutely bound up with the perpetuation of the supplies of raw material.

The greatest menace to that perpetuation is the forest fire, which, if it continues its destruction at the present rate, will threaten the existence of the lumber, woodworking, and pulp and paper industries. Various protective measures have been taken up by the Provincial Governments and by the lumber and pulp and paper companies, but the fact that we lose by fire many times the value of the lumber and pulpwood cut for commercial purposes each year is evidence that those measures are entirely inadequate.

According to Dr. C. P. Howe, Dean of the Faculty of Forestry, University of Toronto, the amount paid for fire protection is less than one-fifth of one per cent. per acre each year to preserve the continuance in the future of the second largest wealth producing industry in the country. A considerable part of this cost is borne by the lumbermen and the pulp and paper industry. No one likes to add to their financial burdens, but it is clear that if we are to save the forests a considerably larger sum will have to be spent on fire protection.

The Provincial Governments might apply a larger part of the revenues received from the lands and forests to this work, which has a decidedly important bearing on the commercial future of Canada. If the expenditure on forest fire protection were double or treble the present sum, it would bear no relation in amount to the losses which would certainly take place were no such protection provided. The

measure of the extent to which we protect forest resources is the measure of the perpetuation of those resources and all that this involves in the well-being of Canadian lumber and pulp and paper industries.

Under the present plan, by which the natural resources of the country, except in the West, are vested in the provinces, each government frames regulations for forest protection, as far as Crown lands are concerned. While those regulations are more strict and are more rigidly enforced than a few years ago, they by no means afford sufficient protection. It might be suggested that greater co-operation between the provincial governments would be one method of ensuring better protection, and to that end the Provincial Governments and the Federal Government should hold a conference at which the whole question of fire protection could be discussed, with a view of devising more uniform and efficient regulations. This would no doubt mean a greater expenditure, but that is inevitable if we are to save our forest wealth.

### Making Graded Charge for Deliveries

The cartage or delivery problem is generally a serious one with the retail lumberman. The best advice given by men who know and have had an opportunity to study this phase of the business from all its angles, is that there should be a separate, regular draying charge to every load. This levy should be made according to the distance and condition of the road over which it is necessary to travel.

Having a free zone, or free delivery within a certain limit and charging outside of that radius, is not a fair solution of the problem. It discriminates against customers in the matter of location. The question arises,—"Where should the free zone end?" A leading yardman, in advocating a universal draying fee, says,—"There should be a charge on every load. If a large load is hauled, it should be charged for accordingly; if a small one, allowance should be made for the size of it. It is usually a good policy to make the charge equal to, or almost as much as the city dray would charge for a like service, and in any case it should be enough to cover the cost of the service, including upkeep and interest, as well as the actual operating expense. Any dealer adopting this plan will find that most of his delivery worries have been overcome; that he seldom has to make long trips with small loads; that he will have only about one-half as much returned material to bring back from the completed job, and that his customers are better satisfied than under the old haphazard system."

In Quebec City, an active retail organization of lumbermen has held sway for a number of years and one of its first acts was making a charge for delivery. This system has been rigidly followed by all the members of the Association and several outside of it. Conditions have greatly improved by the adoption of such a plan and there is not a retailer to-day in the ancient Capital who would revert to the old hit and miss system.

Many thousands of dollars have been saved by the members through the adoption of a uniform fee for delivery of forest products to customers. Under this system there is no opportunity for dispute as everything is made plain and simple. Each member in Quebec has a large card hanging in his office upon which the statement is made in bold type that a charge is made for delivery to customers and there is a table showing the tariff follows.

When the Quebec dealers started to make this charge they operated for a period of three years on a basis of 75 cents per load for deliveries down town and \$1.00 per load for deliveries up town, by a one-horse wagon. For a two-horse wagon the corresponding charges were \$1.25 per load down town, and \$1.75 per load up town. Three years ago it was found necessary to increase this charge, and the present tariff is \$1.00 for a one-horse load down town and \$1.50 for a one-horse load up town; \$1.75 for a two-horse load down town and \$2.50 for a two-horse load up town.

In connection with small orders the charge is divided among two or more customers if two or more deliveries are made at a time, the division being a corresponding proportion of the charge. If a customer gives an order for a small quantity, wanting it delivered immediately, and no other small delivery is going in his direction, he is charged the full rate.

One dealer stated recently that his firm had realized from collecting for deliveries in the last six years the sum of \$18,000 or \$3,000 annually. It is stated that this represents the average amount earned by the members each year for making a delivery levy which is fair and equitable to all. There is no camouflage about the fee, no sharp practice or secret work, no apparent absorption of it and then surreptitiously sticking it on the price. It stands out clear and distinctive on each order and is settled accordingly. People have confidence in this method because it is an open one and no subterfuge can be resorted to.

# Budget of Briefs From the Busy East

Rafting operations were started by the Nashwaak Pulp & Paper Company at their rafting grounds at the mouth of the Nashwaak river recently. Driving operations were completed towards the latter part of May. George McKnight, one of the company's officials, said that over half a million had been left behind on the streams. The total cut of the Nashwaak during the past winter has been estimated at fifteen hundred million feet. From present indications rafting operations will be carried on at the mouth of the Nashwaak until late in August.

A report received says that the E. Burt Lumber Company's driving operations on the Keswick have been completed and a sufficient supply of logs is now on hand to keep the company's mill at Burt's Corner in operation all season. This company's cut during last winter amounted to approximately six million feet, including a quantity which was hauled out to the mill during the winter. They estimate that about half a million was left behind during driving operations, caused by one of their dams on the stream blowing out. The mills at Burt's Corner and at Doaktown have been in operation for some time.

The River Valley Lumber Company have started sawing operations at their mill at Oromocto, N. B. It is estimated that sufficient logs are on hand to keep the mill in operation all season. Their winter's cut is estimated between six and seven million feet and from late reports all of this amount is in easy accessible waters. R. B. Smith, M.L.A., took charge of the drive personally and brought it out in five and a half days. The big drive had to be brought across a lake nine miles long and five miles wide during which a high wind was blowing and large waves running. At times the under tow was very strong and as many as 1,000 to 1,500 pieces were thrown out of the boom at once, but were all replaced again, partly by the action of the water.

Daniel W. James of Devon, N. B., and Edward W. Hagerman, of Fredericton, two of the Forestry graduates of the University of New Brunswick of the class of 1923 have taken positions with well-known lumbering companies. Mr. James has been taken on with the Pejeboscott Lumber Company, whose chief place of business in the province is at the Great Salmon River, while Mr. Hagerman is with the St. Maurice Lumber Company of Montreal.

A new lumber company has been formed in New Brunswick with head office at Edmundston. Alex. Dunbar, James R. Dunbar, Ronald H. Dunbar, Douglas Dunbar and Gordon Dunbar have formed a partnership under the name of the Dunbar Lumber Company.

J. W. Brankley, general manager of the Miramichi Lumber Company, Ltd., of Chatham, who was in St. John recently, announced that all the mills on the Miramichi are operating this season and he expected that there will be a large cut. He said the lumbermen had been pretty hard hit by the recent floods, which carried away a good many booms, causing a substantial loss.

Stetson, Cutler & Company's mill at Indiantown started operations recently with a crew of 150 men. It is expected that this mill, which is known locally as "The Big Mill," will continue sawing operations until the fall.

The Randolph & Baker mill at Randolph also started operations recently. The Jones Brothers mill at Apohaqui has been cutting for the last few weeks. The West Bathurst mill of the Bathurst Lumber Company, Ltd., which was shut down as a result of machinery trouble, has resumed operations and a good season's cut is anticipated.

Forest fires in the Province of New Brunswick have been conspicuous by their absence so far this year, which is largely due to backward weather conditions as well as to the untiring efforts on the part of authorities to impress on the minds of all the importance of protecting the forest wealth. A few days ago a report was received from the Penniac lookout that there was a fire on MacLeod's Hill at Douglas. Investigations showed that the fire had started on the farm of John S. Lint and had spread to the woods. A crew

from the mill of the Hawkins Lumber Company was sent to the scene and extinguished the blaze in the woods before it had a chance to make much headway. A fire was also reported at Tobique Settlement, Restigouche County, which started on granted lands adjacent to Crown lands. The Richards Manufacturing Company sent a crew of men to fight it and no great damage resulted.

The Canadian National Railways, since becoming subject to the Railway Commission, have undertaken the patrol of their line in the province this year and have assumed the responsibility for patrol and fire fighting along their property. Twenty-two track speeders, which had been used by railroad patrols operated under the direction of the Department of Lands and Mines have been turned over to the C.N.R. under the new arrangement, which relieves the department of patrol duty.

The new system under which registration by all persons entering the woods is necessary is being credited by officials for resulting in less carelessness on the part of fishermen and campers. The inauguration of this new plan for forest travel has been received by the public in a way which indicates that it will be well observed. Those desiring to enter the woods have found little trouble securing the permits gratis, although some vendors are charging twenty-five cents each. There is no desire to obtain revenue on the part of the Department of Lands and Mines, but to produce a moral effect and not cause undue inconvenience to the public.

Already approximately fifty Municipal Fire Wardens, appointed as deputies by County Councillors, have been confirmed in their appointments by the Department of Lands and Mines, while additional Municipal Fire Wardens are being appointed in the parish districts remote from the direct supervision of the County Councillors. The Municipal Fire Warden is vested with the same power in respect to the control of forest fires as held by the County Councillors. At present York and Kings counties have led in the number of appointments, which have been made.

Seventy licensees of Crown Lands have also joined in the general scheme for the preservation of the forests from destruction by fire, in the appointment of 230 co-operative fire wardens. School teachers and school children of the more advanced grades in schools adjacent to forest lands, have also responded to the general call of protection circulated by the Department of Lands and Mines and have undertaken the placing of notices calling the attention of the tourist and sportsman to the danger of carelessness in setting of fires.

A few days ago the Bryson lumber mill in Houlton, a short distance from the border of New Brunswick, was destroyed by fire entailing a loss of approximately \$50,000. The cause of the fire is unknown.

Recently St. John harbor was teeming with logs when about 1,000 went adrift while being towed from King's Pond to the Nashwaak Pulp & Paper mills at Fairville. The logs passed through the falls and down into the harbor. Men in motor boats and others in tugs salvaged the majority of them. The loss of logs and the sums to be paid out in the salvaging operations will amount to considerable.

There have been some large shipments of lumber from Parrsboro within the last few weeks. The majority of the shipments are being made by schooners and are for ports in the United States. In one shipment there were 285,000 feet, while another 280 M.

Much is being heard these days about the print industry and as a result the question is receiving considerable attention in the Maritime Provinces. At the present time there is no plant in the provinces producing newsprint, but in the near future the Bathurst Company will start producing. There are five pulp mills in the province of New Brunswick with approximately a daily capacity of 385 tons of ground wood, sulphite and sulphate pulp. An estimate has been made regarding this industry and it is said that \$23,000,000 was invested in 1921, that there is an annual payroll of over a million dollars and that over 5,000 men are employed in making the pulp, and in cutting and transporting the logs. Twenty years ago there was not a pulp mill in the province, but conditions in the United States made it essential for the establishment of them near

the base of their supply of raw material. As a result New Brunswick has benefited and is considered a good field by those interested in the industry. This again leads to the big question of supply. The pulp industry has made a heavy toll on the New Brunswick forests and preservation of the timber areas is daily being considered of vital importance. It is said that 800 cords of pulpwood are required daily to supply the mills.

Harry Schofield of Rothesay, G. A. Hilyard and G. H. Harrison of St. John, have been incorporated as the New France Lumber Company, Ltd., capital stock \$99,000 and head office to be in Westfield. The company is authorized to carry on a general lumbering, milling and wood manufacturing business.

Encouraging reports are being received from the North Shore of New Brunswick. From indications there is every prospect of a busy and prosperous lumber business during the season. The winter cuts on the Restigouche, its tributaries, and other streams both in Restigouche and Bonaventure Counties were considerably larger than in

1922 and latest reports indicate that the loss during the recent spring freshets was not nearly as heavy as at first estimated. It is estimated that between seventy-five and eighty million feet of lumber are now safely within the north and south booms at Campbellton. Lumbermen were favored with good weather conditions during the drive and there was abundant water for operations. The work of rafting is now going on. Large lumber shipments are being reported from the North shore.

The first meeting of the special board, which has been appointed to conduct and carry on the work of conducting investigation and experimental re-seeding of burned and cut over timber lands in New Brunswick, was held recently in Fredericton. Plans were made to go ahead with the collection of five hundred pounds of tree seed, which will be sown later in the autumn. Arrangements were also effected for the extraction of tree seed at the seed house, which will be built on the University of New Brunswick nursery in Fredericton. Representative areas of not less than ten acres each will be selected in different portions of the province under different climatic conditions on which the experimental work will be conducted.

## Eastern Retailers Will Take Saguenay Trip

The Montreal Retail Lumber Dealers' Association are of the opinion that such organizations have a social as well as a business aspect. The directors have, therefore, made arrangements for an excursion to the Saguenay River by boat. Already a large number of acceptances have been received.

The excursion is not confined to the Montreal retailers, as invitations have been sent to members of the Province of Quebec Retail Lumber Dealers' Association, and to the members of the Montreal Wholesale Lumber Dealers' Association.

The journey will be made on the new boat Saguenay, which will start from Montreal at 9.30 P.M. on Friday, June 29. This will arrive in Quebec the following morning, and will then proceed to Ha! Ha! Bay, arriving at 11.30 P.M. Providing the tide serves, the members will make the journey up the Saguenay River.

The return will be at 7.15 on Saturday morning, June 30, arriving at Quebec at 8.15 P.M. Arrangements have been made for those who desire to stop over at the Ancient City to spend July 1st and 2nd there, this latter date being a national holiday, returning to Montreal on the evening of July 2, and arriving home on the morning of July 3. Those who do not stop over will arrive in Montreal at 8.30 on July 1.

The following committee has been appointed to make the necessary arrangements: Messrs. Greaves, Halliday, Berthiaume, Chauvette, Goring and Drapeau.

### The Itinerary of Quebec Retail Dealers

The outing of the retail lumber dealers of Montreal on the steamer "Saguenay" will be an enjoyable one. The itinerary has been prepared and the boat will leave the city on Friday June 29th

at 7 P.M., going as far as Chicoutimi, which will be reached on the morning of July 1st. On the return trip the "Saguenay" will land at Montreal on the morning of Tuesday July 3rd. Several hours will be spent in Quebec City, and arrangements will be made for some sightseeing cars for the pleasure of the visitors. The "Saguenay" is exclusively a passenger boat for the excursion, and stops at various places will be extended in time or otherwise, according to the wishes of the majority of the passengers. Daylight saving time will be in effect on the trip.

The itinerary is as follows:—

#### Going

Leaving Montreal 7.00 P.M., Friday, June 29th, 1923.  
Arrive Quebec 7.00 P.M., Saturday, June 30th, 1923.  
Leaving Quebec 9.30 A.M., Saturday, June 30th, 1923.  
Arrive St. Irene 3.00 P.M., Saturday, June 30th, 1923.  
Leaving St. Irene 4.00 P.M., Saturday, June 30th, 1923.  
Arrive Murray Bay 4.30 P.M., Saturday, June 30th, 1923.  
Leaving Murray Bay 7.00 P.M., Saturday, June 30th, 1923.  
Arrive Chicoutimi 5.00 A.M., Sunday, July 1st, 1923.

#### Return

Leaving Chicoutimi 9.00 A.M., Sunday, July 1st, 1923.  
By the Capes, noon, Sunday, July 1st, 1923.  
Arrive Tadousac 3.30 P.M., Sunday, July 1st, 1923.  
Leaving Tadousac 5.30 P.M., Sunday, July 1st, 1923.  
Arrive Quebec 6.00 A.M., Monday, July 2nd, 1923.  
Leaving Quebec 9.30 A.M., Monday, July 2nd, 1923.  
Arrive Cap la Madeleine 5.00 P.M., Monday, July 2nd, 1923.  
Leaving Cap la Madeleine 5.30 P.M., Monday, July 2nd, 1923.  
Arrive Montreal 1.30 A.M., Tuesday, July 3rd, 1923.

## Ontario Men Will Visit Thousand Islands

Preparations are going on apace for the annual midsummer outing of the Ontario Retail Lumber Dealers' Association. Everything is progressing favorably and W. B. Tennant, of J. B. Smith & Sons, Limited, 53 Strachan Ave., Toronto, who is chairman of the Outing Committee, is receiving an encouraging number of reservations. The steamer "Cape Trinity" will carry the party down the St. Lawrence and will be reserved exclusively for lumbermen and their friends. Many members of the trade will be accompanied by their wives and families.

The trip is one that presents unusual opportunities in the way of social, educational, scenic and restful features. There will be no great rush and no strenuous schedule that will be rigidly followed. The boat will leave Toronto at 2 P.M., on Thursday July 5th and proceed to the Thousand Islands, arriving there the following morning at 9 o'clock, going through the American Channel and reaching Brockville at 2 P.M. in the afternoon. An hour's stay will be made there and the steamer will set sail again through the Canadian Channel and will reach Kingston that evening, Friday July 6th.

On Saturday morning the vessel will sail up the Bay of Quinte for Belleville, which city will be reached at 2 P.M. Calls will then be made at Trenton and by Sunday the "Cape Trinity" will have reached Queenston where special electric cars will be secured to take the party to Niagara Falls and Chippewa and return to Queenston on Sunday night. Toronto will be reached on Monday July 9th.

The outings of the Ontario Retail Lumber Dealers' Association are always enjoyable and the one on the present occasion bids fair to equal any undertaking of the past. The cost of the trip has been placed at \$40 for adults and \$35 per person for children. This includes meals, berths, etc., and as already intimated, it is desirable that reservations should be made at once with Mr. Tennant, accompanied by a cheque of \$20.00 for each berth, the balance to be paid before June 21st. Little children, sharing a berth with one of their parents, will be charged only \$10 each for the trip.

The Cape Trinity of the Canada Steamship Lines which has been chartered for the occasion is a fine, large vessel which will accommodate 225 passengers. It is well equipped and carries an efficient crew selected particularly for the looking after the comfort and convenience of convention parties:

### Hardwood Shipments are Active in East

H. L. Hebard, who has been appointed chief inspector for the Montreal district of the National Hardwood Lumber Association, states there is quite a little stock being moved from that market at the present time and practically all of it is going to U. S. points. There is not much trouble now in getting stock loaded although some few points are embargoed.

# The Retail Lumberman and His Delivery Problem. —Does It Pay to Buy Motor Truck?—

By L. G. Jackson

It is the purpose of this and succeeding articles to outline methods of delivering lumber from retail yards other than by horse and wagon. While not desiring to uphold any one method as more advantageous or economical than another, it is hoped that the series will prove of benefit and assistance to any who may contemplate the addition of motor equipment either for the first time or as an extra unit to present delivery methods.

In the present instance we will briefly outline methods of delivery by motor trucks, and in succeeding issues there will appear contributions on the use of trucks and trailers and tractors and trailers, while other articles will deal with comparative cost data, etc.

There are three methods of delivering lumber by trucks alone, the first being the use of a truck equipped somewhat similarly to that seen in the illustration.

This equipment consists of a truck of long body dimension, mounted with a stake or rack body. This equipment is possibly more suitable to the requirements of the average yard or mill than any other in that it is of the most general service and can be used either for delivery purpose or any of the many needs arising daily around the ordinary plant.

With this equipment the mill can deliver the rough lumber or

A two to three-ton truck equipped with roller body which is of a type used by many retail lumber firms. The one shown here is part of the equipment of Wm. Williamson, 815 Woodbine Ave., Toronto

finished product equally well and have no trouble in handling the refuse as occasion may arise, whereas, with other types of equipment, some parts of the delivery must be handled by other trucks or teams. This type may be called the general purpose delivery truck and is, perhaps, the least costly equipment which a mill or yard can own. All that is required at the time of purchase, will be the truck chassis, and the body and cab could be built by the purchaser himself.

## Truck with Roller Body

The next consideration for a yard of generous proportions would be a truck equipped with a body similar in design to a platform, but having one or more rollers set in somewhat higher than the floor of the body. The end roller, being equipped with a bar, the driver is able to roll the load off at its destination. This equipment can also be used for the average purpose delivery but is not quite as adaptable as the one previously explained, in that a yard having such equipment would keep it entirely on the delivery of rough lumber or timber material which can safely be unloaded without handling.

Another type often used where large loads of bill stuff are continually hauled, consists of a straight roller body and is made of two bunks or sleepers having four or more rollers mounted directly on these sleepers and having no platform at all.

Possessing this equipment a yard is necessarily restricted to the use to which it can be put and must have sufficient rough lumber to deliver to warrant the installation of such equipment; otherwise the truck would not be working its full complement of hours and

other delivery equipment would be carrying much more than their just share of the burden.

These three types represent the means of delivery by motor truck, and while it is not the purpose of the present article to compare them as to cost of operation, it might not be amiss to point out some of their features.

## What Yard Men Must Consider

The yard owner must carefully survey his requirements and determine which type would best suit his particular location. He would be well advised to call in a good transportation engineer to assist him in making his selection as there are many factors to consider before definitely deciding to add new motor equipment. Quite a few problems will present themselves, and it is best to have them accurately diagnosed by a man whose experience has been gained through actual installation and study of many such problems.

The local road conditions will determine to a great extent just what type of vehicle should be bought; whether it should be large or small, what tire equipment, either solid or pneumatic; of what size, etc.

In the purchase of additional vehicles, it is well to check back over a known period in order to ascertain just what amount is usually handled and whether the loads are of material which is bulky or of more than average length; whether the delivery points are far away or all short haul work.

If the owner will carefully check over the various conditions under which his equipment must work, and buy accordingly, he should obtain a maximum of efficiency at a minimum of expenditure. He cannot expect to handle his product to the best advantage unless he is equipped to care for his wants with as little inconvenience as possible.

It is hoped that, in this and subsequent issues, there will be a few thoughts helpful to many of the retail dealers who are regular readers of the "Canada Lumberman."

## Woodworking Plants are Adding New Equipment

P. B. Yates Machine Co., of Hamilton, Ont., report that business conditions appear to be improving and the volume of orders is increasing. They state that last month was the best one they had in the past two years. Orders have been general with no special demand for any particular machine. Shipments of planers, moulders, resaws and other types of woodworking equipment have been sent during the past few months to the Maritime provinces, Quebec, Ontario and British Columbia.

The Power Lumber Co., of Quebec, recently purchased a No. 91 fast feed planer and matcher with automatic feeding table; a No. 341 band resaw and grinding machinery. The Builders Moulding Co., 52 Noble St., Toronto, have lately installed a No. 108 10-inch moulder. This company have also considerable other equipment of the Yates Machine Co., including an A-7 Patented Hardwood Flooring Machine. The same machine is in operation at the Satin Finish Hardwood Flooring, Limited, Weston, who are very busy at the present time.

## Progressive Firm is Making Extensions

Longfield Bros., of Mount Brydges, Ont., have recently completed an extension to their premises. The addition, which is of brick, is used for the manufacture of sash and doors. Longfield Bros. have been in business since 1915 and have made good progress. Their plant is located close to the G.T.R. station and is a comparatively large one. The sash and door factory is two storeys high and stands on a lot 70 x 90 feet and is fully equipped with machinery and three new electric motors have been recently installed. Longfield Bros. also operate a sawmill which is at the rear of their planing mill.

## Large Amount of Lumber Used

The Vigars-Shear Lumber Co., of Port Arthur, Ont., which was established in 1885, say that the amount of lumber marketed at the head of the lakes this year will be somewhat greater than in 1922, due to the large volume of grain elevator construction. "The lumber dealers have endeavored to encourage home building in 1923 by selling their products at wholesale prices," says George F. Clarnson, manager of the company, "but so far this has not resulted in any material increase in the number of permits for dwellings."

## Wholesalers Enjoy Golfing at Georgetown

On the invitation of J. B. Mackenzie, who is chairman of the Orangeville district of the Ontario Retail Lumber Dealers' Association, a number of Toronto wholesale lumbermen journeyed to Georgetown, Ont., on Saturday June 9th, and enjoyed a game of golf on the splendid links adjoining that town. The visitors were hospitably

The Club House of the Georgetown Golf Club

ably entertained by Mr. Mackenzie and spent a delightful afternoon on the nine-hole course which is admirably laid out and picturesquely located.

Among those who showed their prowess on the green and fairways, were F. T. Verrall, W. N. Fox, W. J. Lovering, F. H. Pratt, R. G. Chesboro, A. N. Dudley, H. E. Hodgson, Dr. A. I. Palmer, Horace Boulton, secretary of the W.L.D.A., and others. The party returned to town in the evening well pleased with the day's outing.

## Government Sells Blown Down Timber

William Milne and Sons, North Bay, Ont., were the successful tenderers to the Ontario Government for a quantity of timber lying in Lake Temagami, which had been cut from blown-down timber in the Temagami forest reserve. The price paid by William Milne and Sons was a lump sum of \$5,250, the estimated quantity of timber being some 4,694 pieces, making 217,425 feet, board measure. The wood consists principally of white pine and a small quantity of red pine and spruce, and the lump sum paid represents a price of about \$24 per thousand feet, board measure. The timber will be salvaged by the contractors.

## Had Good Luck With Spring Drive

The English Lake Lumber Co., Limited, of Lake Frontier, Que., state that their spring log drive is finished and was very successful. The firm cut 6,000,000 feet of logs last season, 90 per cent. spruce, the balance cedar, this being about the capacity of their mill which was started about six weeks ago and has since been running steadily, cutting about 50,000 feet per day.

P. Bienvenu, manager of the mill, states that so far they have had no trouble in securing men and wages are from 10 to 15 per cent. higher than last year. All the spruce lumber of the English Lake Lumber Co. has been sold to a United States firm and orders are being received for immediate shipment.

## B.C. Interests Satisfied with Outlook

In reference to the outlook in British Columbia a leading wholesaler of Vancouver stated lately that business in the forest products arena was very satisfactory. Although trade fell off considerably during the closing days in May, the Coast mills did not realize it fully as they were busy on old orders, both rail and cargo. It would seem that more lumber than ever is being purchased in British Columbia by Washington wholesalers.

Weather conditions during the spring were very satisfactory for logging and milling. The outlook on the whole is good and British Columbia interests anticipate a steady turnover with fair profits during the remainder of the year.

## Sales Tax Likely to Curb Demand

Writing to the "Canada Lumberman," a leading firm in North-western Ontario, in the Sudbury district say,—"While we are in favor of a sales tax in order to relieve the income tax, such sales tax should be reasonable, and it seems to us that the increase of from 3 to 6 per cent is rather inconsistent. If the manufacturer is obliged to assume this tax, he is going to increase the price of his product to that extent and, perhaps, try and sell as much of his lumber as possible in the United States.

"As far as we are concerned, we make all quotations for shipments to Canadian points subject to the buyer assuming the sales

tax; in other words, we would rather sell lumber at a lower market figure and ask the customer to assume the sales tax, than to make our prices sufficiently high to reimburse us for the tax.

"We understand the tax does not become effective until January 1st, and, in the meantime, we hope the Budget will be reconsidered and the sales tax remain as at present. In our opinion, the doubling of the tax is liable to influence the demand for lumber and cause considerable hesitation in buying. What we mean by this is, that the psychological effect of such a measure is apt to reflect upon the demand even if the additional sum involved is not very great."

## Lumber Merchants Suffered the Most

The Canadian freight cars at present held on railroads of the United States are being sent back, and the American coal cars held in Canada are quickly being transported southwards.

The shortage of railway freight cars was keenly felt in Canada last winter, and the principal sufferers were the lumber merchants of the Maritime Provinces. The general exporters of the country throughout felt the pinch, and the situation at one time grew so intense that great fears were felt in many quarters for the stability of business. The adverse balance was so high that repeated protests were made to the authorities at Washington, D.C., but without apparent concrete results.

During the last month or so, however, the interchange of box and freight cars has become lively, and there is no longer the acute pinch felt during the winter.

In discussing the situation recently, Mr. C. P. Riddell, Secretary of the Railway Association, stated that the shortage of freight cars was probably a blessing in disguise, inasmuch as there would have been unprecedented congestion on the New England roads. The embargoes, together with the unusually heavy amount of snow on the lines, would have militated against any free traffic, and the result, Mr. Riddell said, would have meant something approaching hopeless chaos.

The secretary of the Railway Association of Canada pointed out the tendency of the railway freight traffic working southwards and that therefore there is naturally an adverse balance of freight cars for Canada at the most normal of times. The past winter season, however, was extremely hard on certain Canadian manufacturers, especially in the East. The lumber merchants of the Maritimes, not so much the large firms as the more modest, suffered through the shortage. In the case of the small mill, the loss was insignificant, as the shutting down of the small plant meant little. The ambitions of many who ran their plants with modest capital were thwarted during the long winter months of the past winter, however, and only the recent arrival of Canadian freight cars from the other side of the border line has saved the situation.

Mr. Riddell thinks that state of normalcy, to use the word coined by President Harding, will be reached very soon, providing the interchange continues for another month or so.

## Stop Export of Pulpwood from Private Lands

In connection with the Fielding Budget, which was presented at Ottawa recently, an important announcement was made by the Minister of Finance in which he stated that there are private lands in every province which are not subject to restriction in the matter of requiring pulpwood to be first converted into a finished product before being sent out of the country. An agitation has been carried on for many years to have the export of pulpwood from private holdings stopped. The federal government has declared that, before reaching a conclusion on this matter, it is of the opinion there should be a more thorough investigation than there has been before, and, during the recess, an endeavor will be made to find suitable persons; one or more, to enquire into the matter and get all the information which it is possible to obtain before arriving at a definite decision.

Generally the appointment of a commission is not taken very seriously by the public. It is frequently a polite way of staving off the issue, begging the question of dodging responsibility. Most commissions are time-serving, highly-paid and respectable bodies who, under the guise of making an investigation, drag out proceedings as long as possible and then take ample time in presenting a report, which is often colorless or impractical. Too often is the appointment of a commission tantamount to the responses of a former Premier of Ontario who, when waited upon by deputations, always evinced the liveliest interest in their requests and promised to take the matter into "his most serious consideration." That was generally the last that was heard of the propositions presented.

A man may have the greatest desire in the world to do good work, but unless he has the knowledge and the skill and good equipment, his task is impossible.

### Pulpwood Prices Hold Firm in Quebec

The pulpwood situation in the district of Quebec is giving satisfaction to the Quebec dealers. There is no dearth of cars and, by the end of June all contracts with the American mills will have been completed. The price is still firm at an average of \$20.50 per cord, delivered to the New York mills, and is likely to go higher.

Quebec pulpwood brokers discussing the situation, say that the American mills are impressed with the idea that the prices will go lower, and believing that the federal Finance Minister is not serious in his proposal to place an embargo on freehold Canadian pulpwood, they are holding back their buying. They feel sanguine, however, that the American mills misjudge the situation, as apart from the Canadian paper mill interests, the farmers are not manufacturing pulpwood to any large extent. The International Pulp & Paper Co. have recently purchased 20,000 cords, and the Canadian mills are also buying from the Quebec freeholders in order to conserve the wood on their own limits.

Discussing the outlook for the cutting of Canadian pulpwood and the effect an embargo would have on its export to the United States, leading bankers say that the wood must advance in price from the fact that the operators have to go so much farther every year to get a supply, and at the end of the present season of cutting the Metapedia Valley will be altogether depleted of its wood.

As a matter of course they do not take kindly to Hon. Mr. Fielding's proposal to place an embargo on the export of freehold wood out of Canada as such would cripple their business unless the government inserted a clause in the proposed law, when it come into effect, to protect the freeholders from being exploited by the Canadian mill operators. They admit that a regulation to prohibit the export of pulpwood out of Canada would compel the American operators to cross over to this country to operate their mills. They would be forced into the northern parts of Ontario and Quebec to find their base of supply to establish their mills, they would open up new territory, cause the development of new towns and the building of railways, but in justice to the freeholders who would be at the mercy of the big paper mill operators, the federal Minister of Finance would have to set a minimum price on all pulpwood cut and sold to the Canadian mills by Ontario farmers and Quebec freeholders.

### Will Complete Power Plant Development

The Canadian Paper Board Co., Limited, of Montreal, intend completing the company's power development and increasing the warehouse capacity at Frankford and Campbellford, Ont. In order to meet this expenditure, a public offering of a new underwriting of \$400,000, 7 per cent, first mortgage bonds is being made by the Canadian Debentures Corporation. The company has two plants in the province of Ontario and one in Montreal which turn out over 100 tons of board daily. The general-manager of the company is D. F. Robertson, who is also chairman of the Board section of the Canadian Pulp & Paper Association. J. G. G. Kerry, of Toronto, is the president of the company.

### Pulpwood Embargo Discussed at Ottawa

There was recently urged in House of Commons at Ottawa a definite policy of forest protection for Canada. Hon. G. P. Graham, Minister of Railways, advocated that something be done by the Dominion regardless of what other people were doing; if not, Canada's resources would only be a memory.

Hon. R. J. Manion, of Fort William, asked if it was the intention of the Government to bring down legislation prohibiting the export of pulpwood from privately owned lands. Hon. Charles Stewart, Minister of the Interior, replied that strong representations in favor of and opposing such legislation had been made. The Government was considering the matter.

Hon. Arthur Meighen, former Premier stated there was no excuse for continuing to permit the exportation of raw wood and, since the basic facts were known, he could see no reason for the appointment of a Royal Commission to enquire into the question.

As to reprisals by the United States, he was not afraid of them. There was nothing that would not bring as much injury to them as to United States.

He suggested there might be co-operation with the provinces to provide some rule by which there would be a tree planted wherever a tree was cut. Hon. Mr. Stewart thought the plan would be practicable.

Hon. Mr. Graham thought that timber resources should be replaced as far as possible, for the forest wealth of the Dominion was rapidly being wiped out. Something very radical must take place in this country in regard to forest protection. He said he was in favor of anything that would give forest protection.

In this connection it may be stated that the exports of pulpwood from the Dominion continue to increase. In April they totalled 74,438 cords, valued at \$650,175, compared with exports in April 1922, of 49,076 cords, valued at \$476,344.

### Will Face Serious Forest Situation

The reason that our pulp and paper mills have not as yet felt the actual imminent shortage of the available pulpwood supply is due to the large amount of cutting that has been done in the endeavour to salvage as much of the two hundred million cords of budworm killed wood as possible, says Frank J. D. Barnjum, of Montreal. However, the present year will probably see the end of the salvage period of this dead wood as it has now largely got beyond a usable condition, and when the operators again look about for a chance to cut in green timber they will then very soon realize that there is an acute shortage in the supply. Notwithstanding this tremendous shrinkage in our standing timber we keep adding to our consumption to such an extent that in a five year period the increase in Canada has amounted to 100 per cent., and, at the same time, the loss from fire is also increasing from year to year and, as the country becomes drier from lack of forest cover, will continue to increase.

These vital factors are quite overlooked in estimating how long our standing timber will last. It is the common custom to take the amount of the stand and divide it by the amount of the present cut despite the fact that the loss from the above mentioned causes is more than ten times the amount of depletion by the axe, and that consumption is increasing at the alarming rate above noted.

When the timber on the steeper mountain slopes which should never be cut and also the inaccessible growth is deducted the available stand of live wood is reduced to a very small quantity. Over and above all this the most serious thought for our consideration is that our watersheds are already over-denuded of forest growth to such an extent that many of our mills have to operate at half capacity or less for four or five months in the year from lack of power, with alarming freshets in the spring, causing untold damage together with severe climatic changes, and an alternating of cold and heat which are disastrous not only to agriculture but to human life as well.

### Primary Lessons in Rangers Schools

A conference in connection with the Woodlands section of the Canadian Pulp and Paper Association was held lately in the offices in Montreal. This was attended by O. M. Porter, secretary of the Woodlands section of the American Pulp and Paper Association; R. S. Kellogg, secretary of the Newsprint Service Bureau; Elwood Wilson, chairman of the Woodlands section of the Canadian Pulp and Paper Association; Dr. C. D. Howe, Dean of the Faculty of Forestry, University of Toronto; J. N. Stephenson, of the Institute of Domestic and Industrial Arts; and G. C. Piche, Chief Forester of the Province of Quebec.

The object of the conference was to discuss the preparation and publication of a series of primary Lessons on forestry and logging for use in ranger's schools, and for use in carrying on a correspondence course in woods operations. It was proposed to make joint arrangements between Canadian and American interests, the books to be distributed and used by the Woodlands sections of the American and Canadian associations, by the Institute of Domestic and

Some of the huge pulpwood piles of the Porcupine Pulp & Lumber Co., at Hoyle, Ont.

Industrial Arts, by the School of Rangers for the Province of Quebec, and the Forestry School of the University of Toronto. An outline of the subjects to be dealt with was discussed and agreed upon, and it was left to Messrs. Porter and Stephenson to arrange for the preparation of manuscripts and other details. Each chapter in the text-books will be prepared by an expert on the subject.

### Putting Pulp Plants on Good Basis

Recent cable advices received from England state that at the annual meeting of the Becker Co., Limited, which was held in London, England, recently, Sir Frederick Becker, president, announced that his organization, which controls several pulp and paper subsidiaries, was putting the Chicoutimi Pulp Co. on a better financial basis. Some minor changes are being made locally in the management at Chicoutimi. These are of a minor character and do not foreshadow any drastic reorganization.

Sir Frederick said it was essential that the railway, of which his company had built about thirty miles, should be centred around Lake St. John. Hon. L. A. Taschereau, Premier of Quebec, had promised every facility for the company within the power of the Quebec Government. The Overseas Minister of Trade had also been approached in the matter, Sir Frederick added, but while he was sympathetic, matters were in the hands of the Advisory Committee of the Ministry.

### Much Depends on Power Developments

The new huge Hydro power development at Des Quinze Dam, Que., is arousing much interest in pulpwood, lumbering, paper-making and other circles. The Northern Canadian Power Co. will erect a 20,000 h.p. hydro electric plant at a cost of about \$4,000,000, with the object in view of ultimately developing 60,000 h.p. The preliminary work preparatory to general construction has been started by the contractors, Morrow & Beatty.

It is stated that following in the wake of power development and the building of the railway, will come the construction of a large pulp mill by McLachlin Bros., of Arnprior, and the Edwards interests of Peterboro. It is reported that the plans of the new industry have already been prepared with extensive neighboring timber limits from which to draw the raw material. It is apparent that Des Quinze is destined to find a place soon among the important industrial centres of the north.

### Plant for Preparation of Pulpwood

The St. Regis Paper Co., Limited, Montreal, have decided to construct at Godbout, on the north shore of the St. Lawrence, an extensive plant for the preparation of pulpwood. The wood will come down the Godbout River, and will then be conveyed in chutes about one and one-half miles overland to the plant, situated at Godbout Harbour. A large wharf is being built on the harbour for the purpose of loading the wood into boats. The plant will have a capacity of between forty or fifty thousand cords of wood per annum, and will include cutting and rossing departments. W. F. V. Atkinson is in charge of the construction work at Godbout.

### Exports are Draining the Country

The exports of pulpwood in Canada from private lands are increasing all the while. For the year, 1922, the figures practically amounted to 1,000,000 cords. The census of Canadian industry shows that during the last three years, wages and salaries paid to convert pulpwood to pulp and paper averaged \$14.00 per cord. During the same period 3 2/3 million cords were exported and the Canadian payrolls lost \$51,000,000. A heavy loss to the industry and to the Dominion as a whole is the result of the export of pulpwood from lands held in fee simple, and figures show that had the wood exported in 1921 alone been manufactured at home into a finished product its sales value would have been increased by \$57,500,000.

Another strong argument against the exportation of pulpwood

is sounded in a personal letter from Mr. Barnjum to the Members of Parliament, in which he says in part:—Nothing emphasizes the critical situation of our wood supply so strikingly as the tremendous advance in the price of stumpage as recorded in the recent sale at auction of 2,000 square miles by the Government of Quebec of the most remote limit so far sold in the Province which was bid in by American interests at a price equalling over \$4.50 per cord, which is just four times the price of the previous sales of stumpage by this Province. There is no safer barometer than the inviolable law of supply and demand. In addition to the price paid for this stumpage, these people are obligated to build a 100-ton pulp mill in Canada, develop a 15,000 H.P. plant and comply with many other conditions. The last fee land holding of any size or value unsold in the Province of Quebec is now held at a price of \$3,000,000.00 for 80,000 acres, or very nearly \$40.00 per acre, and even these prices will look low in another year. These cold facts and figures speak more eloquently than any note of warning that I can give utterance to.

The subject is not a new one by any means and it is appropriate to refer here to an editorial which appeared in the "Canada Lumberman" on January 1st 1921, under the caption "Let Canada Keep Her Pulpwood—Export Her Paper." It was pointed out then that pulpwood cut on the Crown Lands of Ontario, Quebec and New Brunswick cannot be exported until converted into pulp and paper. This enactment was of a provincial character and was wisely placed on the statute books several years ago. There are, however, great areas of privately-owned lands from which the wood is being taken and sent across the border, and it is time for Canadians to waken up to the fact that this great national heritage is vanishing rapidly. In the end the people of the Dominion will find, unless radical measures are taken, that, like Esau of old, they have sold their birthright for a mess of pottage.

The only argument that has been raised against the restriction of pulpwood export from private lands is that many a settler would be deprived of access to the market over the border and that his chief revenue, while clearing his property, is from the pulpwood harvest. It is contended that if he could not sell only to those doing business in Canada, he would be at the mercy of Canadian concerns and would not be able to realize the top-notch figure for his raw material.

This contention is no longer valid owing to the fact that pulpwood is steadily getting scarcer and the sources of supply farther removed. There are over one hundred pulp and paper manufacturing industries in the Dominion and the number is growing rapidly. This in itself is a sufficient guarantee of competition which will ensure the settler getting the highest price for his product.

Canada's coniferous woods are disappearing all too rapidly. Her people have been too prodigal in the use of them, a use which has been changed to abuse. We will waken up some morning to find that our forests, like the Arab, have silently stolen, or been stolen away, while we were apathetic and indifferent. Canadians should waken up to the fact that stumpage is a valuable asset and something that cannot be reproduced in this generation or the next. What is needed is greater aggressiveness, national cohesion and more public spirit,—an appreciation of what lies at our very doors. We require closer vision and a saner outlook.

If the future of Canada as a great pulp and paper producing country is to be assured and its prestige and preeminence maintained, a federal act should be passed as speedily as possible prohibiting the further export of pulpwood from privately-owned holdings. Those human beings, who neglect physical exercise or the proper care of health, are shocked some morning to find bodily vigor undermined and heart action weak. We, in Canada, have been going along, so far as our forests are concerned, in a too happy-free manner, thinking only of today and giving but little thought to the morrow. Anything that will jolt Canadians into action and decision and make them more assertive and independent, heeding the welfare and advancement of their own country, will be a long step in giving the Dominion the place under the sun that it should enjoy. We have been bartering a most rapidly disappearing and indispensable raw material for a paltry pittance. It is time to call a halt.

# LUMBER TRADE CONDITIONS

## Ottawa Lumber Business Remains Fairly Firm

Conditions in the Ottawa lumber market during the early part of June did not show any appreciable change, as compared with the latter part of May. Business with the United States yards continued to remain fairly quiet, and though the domestic demand did not pick up very much, there was absolutely no sign of lower prices for lumber.

Most of the wholesalers were kept fairly busy working on old orders which they had received from American yards some time ago. There were very few new orders or inquiries received. The slackening up of the demand from the United States was attributed to the slowing up of building. Local dealers believed that the slowing up of American building in several of the States was largely due to exceedingly high wages demanded and received by labor.

A survey of the domestic market did not reveal any great movement of stock. Several plants were running on old orders and expected to be kept fairly busy for some time to come in completing them.

While the American and the domestic did not show a great deal of activity, a considerable increase in trade was noted with the South American countries. The principal demands from these quarters were for white pine, twelve inch planks and boards.

The English market also showed signs of picking up, there being a marked increase in the movement of stocks bought months ago for the European market. In trade circles it was freely reported that several sales of stock suitable for the European market had recently been made, one of the principal being the cut of pine deals of the Gatineau Company Limited, to Cox, Long and Company, whose headquarters are at Liverpool. It was reported that this sale contained about six million feet.

The labor situation, both for the drive and with the sawmills, was reported to be satisfactory. With several of the Ottawa Valley Companies it was reported that their drives were from four to five weeks late due to the backwardness of the spring season. Sawmill operations are well under way and while it is too early to yet predict what the season's saw cut will be, it seems likely from the amount of space in the manufacturer's yards that it will be up to, if it does not exceed, that of last year.

During the first few days of June bush fires breaking out in the Kipawa, De Moines, and Gatineau Valley districts caused losses to limits of representative Ottawa Valley Companies, which will run into the thousands of dollars.

The limits chiefly effected were those of the J. R. Booth Co. Ltd., The Hawkesbury Lumber Company, McLachlin Bros. Ltd., and Shepard and Morse Company, in the Kipawa and De Moines districts, and those of the Gatineau Company Ltd., The Riordon Co. Ltd., and the E. B. Eddy Company, Limited, in the Gatineau district. In addition to the limits of the larger companies and operators which were effected, there was also a considerable number of holdings of smaller men and jobbers burned over.

Up to June 5th., no total estimate of damage caused was available at Ottawa, on which date more reports of new fires were still being received. A rainfall on June 4th., largely helped to check the fires in the Gatineau Valley region. Large forces of men, from the lumber companies and the Ottawa River Forest Fire Protective Association left for the scene of the flames.

The latest fire to be reported up to June 5th., was on the southern boundary of the Shepard and Morse limit on the Bois France, about 17 miles from Kipawa. This limit which is largely composed of a stand of white pine is about 100 square miles in extent. The report announcing the fire on the Shepard and Morse holdings, said it was believed the blaze had come down over the McLachlin, Hawkesbury, and Booth holdings in this district.

## St. John Believes Good Outlook Will Continue

From present indications the outlook is bright for a stronger market. A hope is expressed that a change for the better is imminent and it is expected that conditions will slowly but steadily improve. Prices still remain firm and while there is no great demand for some sizes, others are being sought and can be disposed off without difficulty.

As far as scantling is concerned the figure at the local manufacturers is \$29.00, except for desirable lengths which are being sought. The call for some sizes has fallen off and prices offered are not very

attractive. 2 x 3 is scarcer than 2 x 4 and is therefore in greater demand.

The Majority of dealers are expecting to buy 2 x 8 for \$38 and then retailing it at a reasonable margin. Dry boards are scarce and the prices for them remain firm. These can be sold without any loss of time. This is also true as regards merchantable spruce covering boards if they are five inches or wider and eight feet or longer and planed on one side, even though green.

The lath market is still full of surprises. Those, who have been purchasing for some time, encounter unexpected fluctuations and must take the bitter with the sweet. Those, who are apprehensive, should not indulge, seems to be the watchword of the men who are dabbling in this line. The selling of one and a half inch laths is not easy according to reports, as retailers at the present juncture do not want them and can not be coaxed to buy even at reduced prices, but such is not the case relating to one and five eights. The demand for this size is stronger and considerable quantities are being sold.

Prices of dimension spruce continue firm at \$40. There is rather more enquiry for provincial random at \$29 to \$39 and a hope that a change for the better in these lines is likely to grow more pronounced is expressed.

Shingles are in strong demand according to late reports. As far as the local manufacturers are concerned they are all sold out and are now producing them to supply their orders. Owing to the scarcity quotations remain firm and from present indications will continue to do so until the depleted stocks have been replenished.

If the building boom in the United States spreads as is anticipated it is bound to have a beneficial effect on the provincial market. Labor trouble in some lines has caused many buyers to hold their orders and when these conditions become more settled, the requisitions for many sizes are bound to be great.

The English market is quite strong and shipments from many points in the Maritime Provinces are heavy. It is expected that the English situation will remain firm and that the demand will continue for some time.

## Quebec Exporters Report More Cheerful Tone

Quebec lumber firms are getting ready for the usual summer season's shipments of timber and deals to their customers in the United Kingdom. It is expected that, with the orders ahead booked and business in prospect owing to a change in the political horizon of Europe, the export of wood from Canada to Great Britain this summer and fall will be in excess of last year's shipments.

During the last weeks of May the Manchester Line steamers "Manchester Division" and "Manchester Brigade," took on at Quebec port cargoes that were shipped by the firms of John Burstall & Co. and W. & J. Sharples, Limited. These vessels were loaded with birch lumber by the former firm and by the latter firm waney pine and spruce, and besides the firm of Hansen & Co. shipped fifteen standard of pulpwood. W. & J. Sharples also shipped overseas 200 standard of spruce and 200 loads of waney pine timber by the steamer "Vargorlia," and expect to keep on exporting part cargoes with the firm of John Burstall & Co. all through the summer and fall seasons.

There seems to be much more cheerful tone in the latest reports received by the Quebec lumber firms from their United Kingdom agents in comparison to the beginning of the present year. The changed complexion of the political horizon in Europe is responsible for the new spirit of optimism which seems to have permeated in the avenues of all branches of British trade circles. As forecasted in the "Canada Lumberman" during the past several months expert observers in touch with all centres of European commercial barometers, the dark clouds so long obscuring the political horizon of Europe and the Near East are beginning to roll by to bring good cheer to the vigilant economists who have been patiently watching and waiting for this ray of light and sunshine to assure the commercial world of its return to normalcy. This sunburst of hope is also giving encouragement to governments, especially the economic interests of Great Britain, which never faltered in its confidence in the assurance of the skill of diplomatic service in its plucky endeavor to iron out all difficulties for ultimate peace and settlement of the world by the adjustment of all disputes.

Such is the text of the latest reports received by the Quebec lumber firms from their British agents who have been watching

(Continued on page 56)

# CURRENT LUMBER PRICES—WHOLESALE

## TORONTO

### White Pine

(In Car Load Lots, F.O.B. cars Toronto)

1 x 4/7 Good Strips	\$110.00	\$115.00
1 1/4 & 1 1/2 x 4/7 Good Strips	135.00	140.00
1 x 8 and up Good Sides	155.00	165.00
2 x 4/7 Good Strips	135.00	150.00

## Lumber Trade Conditions

(Continued from page 53)

closely the world's political game ever since the signing of the Armistice in 1918. The noncompromising note of Lord Curzon to Soviet Russia and the attitude of the latter, notwithstanding the control by Germany, has, without doubt, influenced the Turks to lessen their aggressive attitude and give hopes of an adjustment of the difficulty in the Near East which is most likely to cause the German government to formulate a proposal for the settlement of the reparations question which may be accepted, that will end all difficulties and assure peace and resumption of the world's commerce, industry and an adjustment of exchange.

The British importers of timber are quick to grasp the change progressing in the European field of politics, and, in consequence, advancing their quotations, although price-cutting was complained of in the month of May, especially in regard to sales on c. i. f. terms, of this season's early purchases. With the possibility of an early settlement of the Near East question and the Ruhr difficulty, they look forward to a stiffening of prices. British brokers are optimistic these days, reports the Canadian agents in their latest cable communications, after receiving revised price lists from stockholders, and although the advanced prices are calculated to restrict business to some little extent, the figures are more than justified when they are compared with the cost of landing in 1923.

The British importers maintain that they have a rising market for the past year, but trade, they say, has been slow and it has never been possible for them to obtain from their customers prices equivalent to those at which they themselves were purchasing their fresh supplies.

An encouraging feature for the trade lies in the fact that Belgium and France are in the market to purchase wood and that the rebellion in Ireland is practically at an end. In the course of a few months it is expected that there will be a construction boom in Ireland creating a big demand for wood which will tend to benefit the Canadian trade. Ireland is rather active in buying, and the market in the latter part of May was more pronounced in agency than in importing circles.

In spite of the rumors of financial troubles and possible political conflicts and reports of a huge Russian outbreak, business has increased from an importer's point of view and the level of prices has been absolutely firm. There is an advancing tendency in f. o. b. figures as well as a distinct rise in landed values. The effect is noticeable and many firms, who have been holding off week after week, have come to realize that they cannot defer their operations any longer. They are convinced that by doing so they will not only have to pay more money for spot goods but lose the opportunity of securing early shipments.

On the West coast of England importers are complaining of the moderate demand and of the small contracts they are able to conclude with their inland customers, but at many places on the East Coast and especially in London, trade is more active and merchants are seeking to replenish their stocks with more freedom than has been the case for some months past.

## Montreal Says Orders are Coming in Very Well

The lumber market in Montreal has not changed to any extent during the past fortnight. The buying for American account has not been as pronounced as it was, say six weeks ago, but the orders are still coming in at a good rate. The building situation in the United States has improved somewhat in the matter of labour demands, the men showing a little moderation. Costs, however, are still abnormally high, and if they continue on the present scale, are certain to result in a very large amount of work being abandoned or postponed.

Taking the position as a whole, there is a very satisfactory demand for lumber for industrial and construction purposes. Retailers are not inclined to purchase beyond their immediate needs, holding that it is a safer policy to buy what they want rather than risk stocking up at values which may decline in a month or two.

The Montreal building situation is one of great promise. The permits for last month amounted to \$3,524,825, bringing the total for the five months of the year to \$12,550,292, compared with \$6,583,797 for the same period last year.

The wood working plants of the city have a large amount of work in hand, some of it for points outside the city.

The lath market is not as active as of late, and the price is weaker.

There have been further developments in the British Columbia timber trade via the Panama Canal. A very large consignment has arrived at the port, shipped by Knox Bros. Ltd., of Montreal & Vancouver, to the British Empire Lumber Corporation, Montreal. Other vessels will follow, and it is expected that about forty million feet will be shipped during the season.

The exports of pulpwood continue to increase. In April they totalled 74,438 cords valued at \$650,175 compared with exports in

April 1922, of 49,076 cords valued at \$476,344. Commenting on the proposed Government inquiry into the prohibition of the export of pulpwood, a Montreal dealer declares that should such a measure be passed, it will mean that the Canadian pulp and paper companies will be able to force down prices, because there would be practically no competition for the wood. The American market would be shut off, and dealers would be compelled to accept the prices offered by Canadian buyers.

## Trade in Ontario Has Declined Somewhat

The first two weeks in June were marked by a quieter state of trade than the corresponding weeks in May. Buyers are adopting a conservative attitude and purchasing only such materials as are called for to meet immediate demand. Prices on all lines remain firm and there is no disposition as yet to discount the future by sacrifice quotations.

Dry stocks will be coming on the market next month but it is not believed by those, who have given the situation close attention that there will be any serious disturbance in prices. It is felt that values are now on a steady, normal basis, and if there is any drop, it will be on the part of the millmen who have been getting an unusually high figure for their cut, or by wholesalers desiring to unload. Those firms who have already disposed of their offerings at an advance over last year, are certainly fortunate.

Another thing that might be pointed out is that the mills have got off to a rather late start this year, and there will not be as much lumber produced as was expected at the beginning of the season.

Price tendencies on one or two lines have been downwards although more decisive than during the past few weeks since a lull in the market developed. The demand for yellow pine, always a factor in the Canadian market in competition with hemlock, spruce and jack pine, has dropped appreciably. Several yellow pine manufacturers have made radical cuts in order to get rid of stock. A bulletin, issued by the Southern Pine Association, covering a recent week, shows that orders have dropped to 60 per cent. of normal but production is around 90 per cent.

Another factor across the border, and one which has its reflex action on the Ontario market, is that the abnormal building programme has been considerably curtailed owing to the increase in the price of raw materials and the constant calls on the part of skilled labor, already earning \$10 to \$15 a day, for higher wages. Many plans for large structures have been scaled down and contracts for other huge undertakings have been held in abeyance.

So far as Ontario is concerned, building in the larger cities continues on a satisfactory basis. Trade unions are more reasonable on this side of the line and many skilled artisans, who went across the border for immediate employment at exalted pay, are now returning and will relieve the shortage which has existed at home for several months.

So far as the retail yards are concerned, they are pretty well stocked up and no very great change is anticipated until the dealers begin to place orders in anticipation of the after-harvest trade. The buying of the individual yards in the country districts is limited to essentials. The harvest outlook is, however, very bright and there is every indication of a splendid crop which should serve to put the yeomen in a good mood.

The turnover in hemlock and white pine is very good on the whole so millmen report, and for No. 2 white pine culls there has been a lively demand. Spruce is still strong and active.

The lath situation is not quite as firm as it was a few weeks ago but prices on the whole are fairly firm. The market has broken in the East but in Ontario the call for white pine lath is steady with quotations slightly lower than a month ago. The lath departments of the big mills are now turning out stock sufficient to meet any emergency.

In hardwoods, the situation has slowed down somewhat and the purchasing agents of large concerns have instituted what some call a "buyers' strike," that is, a movement against the higher prices. The term is somewhat of a misnomer but it sounds well, and, in the meantime, is doing duty night and day. Canadian exporters report that they will be kept busy for some weeks yet making shipments on orders already placed, and that, in the meantime, considerable business is likely to filter through. Firsts and seconds in birch and maple are rather slow and the call is for selects, No. 1 and No. 2 common. An improvement is also reported in the demand for the lower ends. The scarcity of dry stocks at the mills creates a situation that requires but little added demand to hold the market firm. Across the border, prices have declined somewhat and competition continues keen for business.

So far as Ontario is concerned, it is not expected that there will be any unusual activity in the lumber arena until after the summer holidays which are now near at hand. Of course, there is always a

movement of a certain number of cars but some concerns, which are heavily loaded with stock, are reported to be rather anxious to get rid of it at a figure which will justify a clean break. Others, however, have abundant faith and are holding on, believing that the present is only a temporary period of uncertainty and that conditions will right themselves in the near future.

One of the leading authorities who specializes in forecasts, says: "In the last six or seven weeks there has undoubtedly been a lull in activity on the part of producers and distributors, but not of consumers. Evidence of this is to be found in the fact that primary activity and volume of orders has been declining, while car loadings, and retail sales figures, allowing for seasonal influences, are making new records. The conditions under which the so-called 'buyers' strike" of 1920 occurred are reversed. In the former case it was the producer and distributor who had unbounded enthusiasm, and the consumer who was growing cautious. Today it is the producer and distributor who are having the chills, while the volume of consumption continues to increase at a steady orderly pace.

"Fundamentally, however, there is absolutely no basis to warrant the expectation of a falling off in consumer buying before the beginning of 1924 at least. The present volume of buying is influenced by seasonal conditions, and seasonal influences will augment it in the fall and early winter. The present ratio of production to consumption is certain at the beginning of active seasonal consumer buying to find but little reserves in the shape of inventories, and it seems inevitable under present conditions that there will be a shortage of finished goods in the fall. As a result of present conditions we believe that the summer months will probably witness a slowly sagging primary and secondary markets, but that the last quarter of the year will be a period of active pressure upon producing centers, with fairly rapid price increase based on the necessity of middlemen to increase stocks in the face of low reserves."

#### Building Likely to Continue Many Months

Building construction throughout Canada is now showing greater activity than at any time since the boom days of a decade ago. Contracts actually awarded during the first five months of this year, according to MacLean Building Reports, Limited, amount to \$114,648,400, compared with \$96,831,600 in 1922, and \$85,326,700 in 1921. Ontario leads with a total of \$62,871,900; Quebec second with \$32,795,000; the Western Provinces, \$16,337,500, and the Maritimes, \$2,644,000. Building in Quebec shows marked activity, Ontario and British Columbia are ahead of last year, while the Prairies and Maritimes seem to languish.

During May, construction contracts awarded in Canada amounted to \$40,697,200, compared with \$34,827,300 a year ago. This is the largest May total since 1913. Residential building accounted for 36.6% of the May total and amounted to \$14,897,100. Business building amounted to \$8,555,000, 21.1%; industrial buildings, \$3,763,700, or 9.2%; public works and utilities, \$13,481,400, or 33.1%. The value of contemplated new work reported during May was \$51,550,400.

The recent accelerated pace of building construction is natural and logical. The shortage of building during the war and post-war period is now being made up. In addition there is a well-defined movement of city-dwellers towards the suburbs. With these two influences operating together, it is not surprising that there has been such a tremendous demand for new construction.

Building on the outskirts of Montreal, Vancouver and many cities in Ontario continues very active. Most of the suburban building is residential—moderate-priced homes for owners' occupation. The increasing popularity of the automobile has caused a pronounced trend toward the suburbs which far-seeing men believe is only begun. It is apparent that it will take a good many years to satisfy the present potential demand for suburban dwellings. It would seem that the present prosperity in the building field is sound in nature and will endure over a considerable period—not at the present rate, but in volume sufficient to satisfy the industry.

Building activity in the United States is being hampered by a rapid and unjustified increase in material and labor costs. By way of contrast, building material prices in Canada have advanced less than 12% from the low of last year. In the main, conditions throughout the Dominion are satisfactory. Industry is extending its operations and showing a gradually widening margin of profit—there is little or no unemployment and a particularly easy money situation prevails.

The head of the firm had caught the office-boy telling lies. "Boy," he said, "do you know what they do with boys who tell lies?"

"Yes, sir," was the reply. "When they are old enough the firm sends them out as travelers."—Tit-Bits.

## KEENAN BROTHERS LIMITED OWEN SOUND

We have sold hardwood lumber for 27 years on merit, direct from our office, by phone, letter or wire.

We can continue to give better value by continuing to do so.

### Power Winch Boat Plant is Rushed

The Shelvin-Clarke Co., Fort Frances; the A. M. Shaw Lumber Co., Fort Frances; the Abitibi Transportation & Navigation Co., Iroquois Falls; the Spruce Falls Co., Kapuskasing; D. A. Clark, of Port Arthur; White & Plant, Sudbury; and other well-known firms have recently purchased from Russel Bros., of Fort Frances, new power winch boats and large, double drum, motor head-works.

Russel Bros. report that there is a lively demand for this equipment at the present time. R. J. Russel, who has been touring the East for some months calling on lumber and pulp manufacturers, had a most successful trip. He secured several orders for the newest

Power Winch Boat with large double drum motor head-works

build of power winch boats which craft is light enough to portage on a tote sleigh, and powerful enough to portage itself.

These boats are the latest addition to the motor head works line of the firm, and have a strongly constructed hull equipped with 14 h.p., 2-cylinder, 4-cycle, heavy duty engine and a single flywheel. The boats are equipped with 1500 feet of 7/26 steel cable and a 200 lb. anchor. They will warp about a million feet of logs or 1000 cords of pulpwood. The speed on the propeller is from seven to eight miles an hour.

Very popular are these powerful craft, especially around the mill pond and for rearing purposes, being of sturdy build, light draught and heavy power. The plant of the company at Fort Frances is kept busy night and day filling orders for several representative organizations in the forest products arena.

### Rain Saved the Timber From Destruction

Two thousand men from the Department of Lands and Forests were engaged lately in fighting forest fires in New Ontario. In the White River district the flames were very threatening but a change in the wind and the coming of showers averted a crisis. It is believed that the fires were originally railway clearing fires which were enabled to spread because of the dry spring.

The Department of Lands and Forests sent in 25 portable fire-fighting units which can be carried by two men, and they were reported to be doing good work. These units are operated by gas engines and each has attached to it 1000 feet of 2-inch hose. The Canadian Pacific Railway issued orders that employees of the road should help whenever possible in fighting the flames.

E. J. Zavitz, chief forester of Ontario, stated that each spring between the run-off and the growth of new vegetation, there was always considerable fire hazard. This year, since the snow melted, the cold weather had prevented green growth appearing, and in addition in the White River district there had been since the snow left a rainfall of only 1/10 inch. Had the spring rains fallen, the present fires would not have occurred, he declared.

### Better Demand for Cooperage Stocks

Sutherland-Innes Co., Limited, of Chatham, Ont., say they are only running four plants at the present time in the making of staves, hoops and heading. They carried over considerable stock from last season, which was a quiet one in business, and are exporting more stock this year than they have had for some time past; in fact ever since the beginning of the war.

Mr. Innes says that unfortunately for export to the Old Country his firm have to ship all their stock through southern ports as Mon-

trepreneurial rates of freight are 40 per cent. higher than from U. S. ports. Practically all the steamers from Montreal, he declares, are in the conference and trying to squeeze out all the traffic can stand.

The cooperage trade is considered better this year than it was last. Prices of hardwood lumber are finer and cooperage stock quotations are a little better. The demand is increasing and it looks as if there will be a clean-up of all stocks carried over from last year and also the stocks made this year, before the end of the season. Mr. Innes reports that there are prospects for a good apple crop, and if this materializes apple barrels will consume a large quantity of stock. There is, therefore, considerable improvement in the cooperage line as well as in the hardwood lumber arena.

"Hardwoods are getting scarcer all the time and higher figures will have to be obtained for hardwood lumber and cooperage stock or manufacturers cannot further make it," concluded Mr. Innes.

### Getting Ready for Forestry Conference

Local committees are being appointed to make arrangements for the entertainment and reception of the members of the Imperial Forestry Conference during their tour of Canada after the termination of the meetings in Ottawa. Brigadier General J. B. White, of the Riordon Company, and Edward Beck, secretary of the Canadian Pulp & Paper Association, form the committee for Montreal, the delegates being expected to visit the city on July 26th.

The programme will include an inspection of the Forest Products Laboratories, a luncheon and a tour of the city. The delegates will then leave for Grand Mere and other parts of the province, going as far as Chicoutimi. G. C. Piche is on the committee for the city of Quebec. The Provincial Government has contributed \$7,000 towards the general expenses of the conference.

### French Cut Forests Ancestors Planted

By a strange trick of fate the French are now cutting down a forest in the Rhineland which was planted more than a century ago by their ancestors. When during the revolution the Rhine provinces were occupied by French armies they cut down the timber in the privately owned forests of Hansrueck, Eifel and Haardt which later became a part of the Reich's holdings.

The French on taking possession of the left bank of the Rhine found it necessary to replant these devastated areas and imported large quantities of Norwegian pines and similar trees from Savoy and the Pyrenees. Before the world war the Germans considered cutting down these trees planted by the French, but the forestry experts advised waiting until 1920, when they would be fully matured. According to the best estimates this delay cost the German empire at least 500,000,000 francs.

### The Final Whitewood Operation

(Continued from page 36)

He has bought up many farms in the neighborhood of Dutton, Ekfrid, Glencoe, Aylmer, Shedden, and other places and, after putting in his own men and taking the timber off, has disposed of the land to good advantage, thus converting wooded areas into flourishing farms.

Through the co-operation of Mr. Oldrieve, of St. Thomas, the "Canada Lumberman" had a sample of whitewood sent to the Forest Products Laboratory of Canada, of which Wm. Kynoch is superintendent, and J. D. Hale in charge of the Division of Timber Physics. The report of the latter is that the specimen is identified as *Liriodendron Tulipifera* L. The wood is known commercially as yellow poplar, tulip poplar, whitewood and sometimes is referred to carelessly as poplar, although not closely related to that group.

In a letter to the "Canada Lumberman" on the report of identification, Superintendent Kynoch says:—"This wood is known commercially as yellow poplar—or whitewood—and is one of the most important North American hardwoods. The tree grows on rich soil and its northern limit of range is from inland Massachusetts through southern Ontario to Wisconsin from which it extends south as a tree of the Appalachian hardwood forest type. The commercial range is now confined to the United States where the tree not infrequently grows 120 feet high with a diameter of 7 or 8 feet. It is one of the best species to plant for reinforcing the wood lot or for shade and roadside planting where conditions are not too severe.

"Although the wood's resistance to decay is not too great, its qualities of freedom from warping, evenness of texture and ease in working, make it important in nearly every wood-using industry. It is unexcelled for cores and crossbanding and—as you noted—for drawers, etc.

# What Does It Cost to Provision Your Camp?

The economical provisioning of a camp or boarding-house requires much experience on the part of the operator and the provisioning house. For many years, we have specialized in this work and have been rewarded by the steady patronage of many lumbermen who have the largest camps. Because we are wholesale grocers on a big scale, our customers are able to buy at the best prices.

Let us quote on your requirements in Tea, Coffee, Figs, Prunes, Pickles, Peas, Beans, Raisins, Molasses, Sugar, Canned Goods, Etc.

## H. P. ECKARDT & CO.

Church St. and Esplanade, Toronto

**Pusher rods keep the fuel marching down the grates to perfect combustion, without avalanching**  
**- - - - The National Hand Fired Stoker - - - -**

The National Stoker burns wood waste without expert firing. No careful spreading or placing is required. The downward sloping grates do away with the great labor of handling a big pile of refuse on horizontal grates. Dust and shavings can be blown in, while sticks or slabs may be passed through the fire door as usual. As the fuel is consumed the ashes are worked down towards the dump plate by levers operating pusher rods, from the front of the furnace. While the fuel moves down the grates under the hot arch it is consumed completely, no fuel being carried over the bridge wall into the combustion chamber, thus ensuring practically no smoke.

**The National Stoker is very popular in wood working plants and mills.**  
**Let us send you an illustrated, descriptive booklet.**

## Protecting Forest Resources of Quebec

The Quebec Department of Lands and Forests have perfected a system organization to protect the forest resources of the province from devastation by fire this spring and summer. The chief forest ranger of the province, G. C. Piche, has for the past several years been working on a plan to put an end to forest destruction by fire or, at least, confine it to a minimum in comparison with former years. He has been in consultation with all Canadian departments of forest lands in connection with the provinces of Ontario, New Brunswick and Nova Scotia, together with the forest superintendents of the States of Maine, Vermont and New Hampshire, with the result that these interests have come together and formulated a well-studied, concrete plan to protect their respective province and state forest resources from fire. Mr. Piche did not rest his efforts here; he also took up the question of protection with the various big limit holders' organizations in the province who have their own forest ranger service and protection against fire. The result is that there is now perfect co-operation and co-ordinization of all these interests mentioned to pay special protection against a repetition of the dire destruction of Canada's valuable woodlands by fire.

Discussing the great need of protection of the forest resources of the country against the continued menace by fire, G. C. Piche, superintendent of the Forestry Branch of the Quebec Department of Lands and Forests, said the time was past to trust to chances, and now the various provinces of the Dominion of Canada, in co-operation with the Forestry Service of the New England States, would use every means on a scientific and commonsense basis to protect the valuable woodlands. He said the Quebec Forestry Branch of the Department of Lands and Forests, presided over by Hon. Honore Mercier will this summer employ 1500 forest rangers, 200 more than last year, and greater attention will be paid to the protection against fire on the North shore of the St. Lawrence, especially in the upper levels of the forest ranges, where so many conflagrations with appalling results took place last year.

Statistics carefully compiled by the Quebec Land and Forest Department show conclusively that twenty-five per cent. of the forest fires are due to the carelessness of the fishermen, campers, hunters and persons who make fires and smoke in the woods. This would mean that in the seasons of 1921-22, due to careless persons in the woods, there were 285,000 acres of Quebec forests destroyed by fire, entailing a loss which runs into millions of dollars. To put an end to this continued destruction, the Department intends increasing its staff of forest fire protection service, and will, through the publicity office, distribute throughout the province 70,000 cotton and fibre cotton posters, 25,000 calendars with scenes and texts dealing with protection education, as well as 375,000 picture cards with reading matter on forest protection to be distributed among children attending schools in the rural districts.

The rapid disappearance of the timber supply in Europe, as well as the United States, is the cause of much concern these days, and arousing the serious attention of forestry experts and governments in the interest of future generations. It is recognized that many difficulties will have to be overcome whether or not the immediate need is pressing. It must be borne in mind that silviculture is not like agriculture or tilling the soil, which yields a crop the same year but is paying a debt to the future for the lavish extravagance of the past century. The need for timber is as pressing as the need for food, and it is feared that the losses we are experiencing these days will not be properly heeded.

The seriousness of the question of reforestation can be grasped when it is realized that the Canadian pulp and paper mills use, approximately, 1,712,250 cords of pulpwood, representing the growth of a century on 342,550 acres, besides the yearly average export of a million cords of wood to the United States in the shape of logs which disabuses the optimistic mind that Canada's pulpwood resources are limitless. For some years past considerable talk has been heard about reforestation but beyond research and experiment, little practical work has been done.

The Quebec provincial government, in view of the critical situation brought on by leaps and bounds in the increase of operators every year in the woodlands, especially in regard to pulpwood as well as timber supplies, have adopted measures requiring limit holders to make an inventory of the forest areas in which they are operating and make a working plan of their proposed annual cut. It is shown how the necessity of these measures has been recognized by the limit holders by their assent. These inventories, to be practical, must be taken periodically as the condition of the forests may undergo changes in the aspect of values each season through the advent of forest fires. Besides, this work will, undoubtedly, entail expense and labor on the limit holders.

G. C. Piche, superintendent of the Forestry Service, referring to the new regulations, expresses his pleasure that several big lumber companies and pulp and paper mill interests have started technical

studies to meet the new government regulations and that the department has received a working plan covering over 3,000 miles of forest area representing one-fifteenth of the total area under license. According to the new regulations, the companies each year will have to submit a logging plan to be checked on the ground and modified when advisable by the forest engineers of the Department of Lands and Forests and of the companies travelling and working conjointly, which will employ a large staff of technical engineers. By the new regulations the limit holders will equally benefit with the province by the system as it assures them an unexhausted source of supply though the annual cost of their operations will be increased.

## Death of Provincial Health Inspector

Many friends in the lumber industry will learn with regret of the death of Dr. R. W. Bell, Provincial Medical Inspector of Health, who passed away at his home, 350 Davenport Road, Toronto, on June 8th from an attack of heart trouble.

Dr. Bell was 72 years of age, and previous to coming to Toronto practiced his profession nearly a quarter of a century in Peterboro where he was a leading citizen. For many years he had charge of the inspection work in connection with the lumber, pulpwood and mining camps and came in contact with lumbermen in all parts of the province. He enjoyed the esteem and confidence of camp operators and loggers in all sections of Ontario.

Dr. Bell, who was a Fenian Raid veteran and prominent in military affairs, is survived by his two sons. His wife predeceased him two years.

## Acting versus Fiddling

By Fred Brown.

Canada's production of lumber is about five billion feet b.m., and the consumption of pulpwood at present is 3,350,000 cords. Within a few years this amount of lumber and pulpwood consumed will be doubled. To supply this amount of lumber and pulpwood nearly 6,000,000 acres of forests will be cut over per year. Nature, unaided, will take care partially of reforestation and will produce in Northern and Western Ontario approximately 5000 board feet of lumber per acre every 100 years. That this amount can be increased from five to ten times by proper management cannot be doubted. The question is not: How soon are we going to plant or How are we going to plant? The question is: How can we get the most usable wood per dollar spent and in the shortest possible time. It is goodbye 250 year old white pine giants. Trees that cut out 22 in. to 24 in. factory stuff are getting rare, and young stuff 100 years old, and in a pinch 80 year old stuff will take its place. It means that a few years from now only about 5 per cent. of a carload will be 12-in. stuff.

For a dollar well spent in fire protection, more trees can be planted (natural seedlings and sprouts) than with nursery stock and hand planting. As I see the whole thing to-day, real protection is the biggest job by far. With real protection, available and assured, I imagine we will develop planting work enormously but not suddenly. There is not going to be money enough to plant any big areas very fast (say 5,000,000 acres a year, as bad as we need it and more too). Hardly any use to plant it. And we will get more wood per acre and year and dollar by working with our wild stuff, poor as it may be, for a long time to come and by all past standards. It will be too poor and too little of it at best. As that becomes evident we shall plant more and more, no doubt.

Forest investments are uncertain on account of the risk of fire and other losses. Combined with a comparatively low rate of interest and the long time required before the investment yields any returns, it is a certainty that private capital will not embark on investments of this kind unless conditions are changed for the better. The history of the Mediterranean countries and also of England and Ireland seems to prove that the gap in the local timber supply is never filled by private enterprise, in spite of the stimulus afforded by the high prices of wood goods. The dislike of the present generation to carry a heavy burden for the benefit merely of succeeding generations must be overcome, if Canada is to exist as a nation.

There are two courses open to a far-sighted government taking its duties and its mandate from the people seriously:

1. Offer such inducements to lessee and various owners as will induce them to practise forestry of a desirable type.
2. To reforest cut-over land and afforest forest land on public account and to undertake forestry socialistically on the people's account.

# Edgings

The Pacific Coast Cedar Pole Association has been dissolved.

The Wolfe River Pulp & Paper Co., Limited, of Montreal, have gone into liquidation.

J. P. Dupuis, Limited, Montreal, have received the contract for the millwork of the new Kenogami mill of Price Brothers, Quebec.

Mark Rogers, of Parry Sound, Ont., spent a few days in Toronto lately on business and called upon several members of the trade.

The Nova Scotia Provincial Government has arranged with the Canadian Forestry Association to have its exhibit car go through the province during the present month.

Plans are being prepared for the erection of a large newsprint mill by Backus-Brooks Co., International Falls, Minn., at Kenora, Ont.

C. L. Reed who for some time has been with the Central Canada Lumber Co. has become identified with the sales force of the Elgie & Jarvis Lumber Co., Toronto.

W. W. Hamrick, vice-president of the Warn-Hamrick Co., Cincinnati, Ohio, was a recent caller upon the lumber trade in Toronto.

The Bridgewater Lumber Co., of Quebec City, are installing an exhaust system for the collection of shavings and sawdust supplied by the Anderson-Barwick Co., of Montreal.

The St. John Dry Dock and Shipbuilding Co., East St. John, N.B., have awarded contracts for the erection of an office and fabrication shop. The latter will be 200 x 200 feet and one storey high.

Foundations are going in for the new groundwood pulp mill of the Bridgewater Lumber Co., 56 St. Peter St., Quebec, P.Q., at St. Foy, P.Q. The new building will cost about \$100,000.

Work is about to start on six miles of logging railway at a cost of \$60,000 for the Merrill & Ring Lumber Co. at Van Anda, B.C., on the Theodosia Arm of the Malaspine Inlet, Victoria Island.

G. Piche, Chief Forester of the Province of Quebec; W. R. Beatty, of the Colonial Lumber Co., Pembroke, and C. Small, Laurentide Co., Grand Mere, were recent visitors to Montreal.

The Canadian Barking Drum Co., of Canada, report that they received some large orders of late for their barking drums, including one from one of the biggest pulp and paper concerns in the Dominion.

Dufour, Limited, St. Moise, district of Rimouski, P.Q., have been granted supplementary letters patent to conduct general lumbering operations, manufacturing and dealing in lumber, pulpwood and paper of all kinds. Capital \$99,900.

Beginning July 16 the Western Retail Lumbermen's Association will commence an enthusiastic fifteen day membership campaign. Lists are being compiled of every retail lumber dealer in Western Canada and all non-members will be solicited.

Thibadeau & Paquet, Limitee, Saint Georges-East, P.Q., were recently granted supplementary letters patent to carry on a business as manufacturers, dealers and exporters in logs, lumber and pulpwood and paper. Capital \$49,000.

The Nashwaak Pulp & Paper Company's pulp mill at St. John, N.B., has been considerably enlarged of late and is now one of the most up-to-date in Canada. The output of bleached sulphite pulp has been increased by 20 tons a day.

The three pulp plants of the Whalen Pulp & Paper Co., in British Columbia are operating on a most satisfactory basis. The market for sulphite pulp in Japan shows a marked improvement and conditions generally in British Columbia are active and the future promising.

The Dominion Engineering Works, Limited, Montreal, are very busy at the present time in all departments and particularly so in its paper-making plant. Large turbines are being built for Price Bros. Co. and the Chicoutimi Pulp Co. A Pope reel for the new 230-inch machine of the Belgo Paper Co., and other large orders have been shipped.

The Power Lumber Co., of Quebec, recently gave a subscription of \$2,000 towards the reconstruction of the Basilica which handsome edifice was destroyed by fire months ago. W. Gerard Power, chairman of the Harbor Commission of Quebec, is head of the Power Lumber Co., which was founded by the late William Power who represented for many years one of the divisions of Quebec.

During the recent warm dry spell a watchman with field glasses was stationed on the waterworks tower of the reforestation plantation at St. Williams in Simcoe County. He was on the lookout for

fires. Although no great loss occurred, many incipient blazes broke out over-running the concessions and underbush and killing many young trees.

Col. J. Lightbody, of the McElroy Lumber Co., Victoria, B.C., who are selling agents for Sidney Mills, Sydney, B.C., was in Toronto, Montreal and other cities recently on business. Greig, Morris Limited, 411 Manning Chambers, Toronto, has been appointed Ontario representatives for Sidney Mills, and the McNeil Lumber Co. Limited, New Birk's Building, Montreal, are the representatives of the firm in the province of Quebec.

The big pulp and paper project of Newfoundland is going ahead and the Premier, Sir Richard Squires, is losing no time in carrying out the proposition which was endorsed recently by the electors. The Newfoundland legislature met on June 6th to pass a bill, confirming the contract entered into between the government and the Armstrong-Whitworth Co. of London, for the building of the mill on the West Coast. The plant will turn out about 400 tons daily.

While further changes are under consideration in connection with the operation of the system of registration for forest travel which went into effect on May 1st in New Brunswick, Hon. C. W. Robinson stated lately that it had been decided to remove the obligation to register from applying to Boy Scouts; scoutmasters, school teachers and pupils when accompanied by teachers and also clergymen.

The various sawmills of Price Bros. & Co., Limited, throughout Quebec started sawing during the last week in May. The firm state that they will have a moderate cut which has practically all been disposed of. The company have also commenced construction work in order to add two more paper machines to their paper mill at Kenogami. Each machine will have a capacity of, approximately, 100 tons per day. They are of the wide variety and when completed will bring the newsprint capacity of the Kenogami plant up to about 500 tons daily.

It is understood that the financing of the Western Quebec Paper Mills, at St. Andrews, Que., is progressing encouragingly. One feature is that bonds are being issued which are guaranteed as to principal through insurance which makes them very attractive from the standpoint of safety. It is expected that preparations for the opening of the plant are progressing but it is not expected that the mills will be running until next October or November.

The Esquimalt & Nanaimo Railway is seeking the right from the Victoria, B.C. City Council to operate permanent trackage across the Victoria West Park to serve lumber mills and other industrial establishments that are and may be established in the future along the west side of the inner harbour. The spur was built some years ago, but is not regarded as permanent. The Moore-Whittington Lumber Company, James Leigh & Sons and other lumber establishments are now making use of the spur.

The number of graduates from the Faculty of Forestry, University of Toronto, was greater this year than in any period since the war. All the members have found permanent positions, mostly with pulp and paper concerns. A number of qualified foresters have been taken over by the Ontario Government and another party has left for the West to do work in the forest reserves for the Dominion Government. Twenty-two undergraduates left recently for Biscotasing to make a forest survey of the Mississauga reserve. They will estimate timber, make maps showing the location of the timber, young growth and burned areas.

Announcement is made that the mill and business of the South Shore Lumber Co. (Ltd.), Vancouver, formerly under the management of S. A. Stuart, have been taken over by a new company, King & Jardine, who are now operating the plant. Frank King, senior member of the new concern, is a veteran of the lumber industry in British Columbia, having been identified for many years with logging as well as lumber and shingle manufacture. W. E. Jardine is a prominent financial man of Vancouver, who has been interested in lumber manufacture. The plant of the South Shore company is on False Creek, in the heart of Vancouver, so it has a large home trade. The new owners propose to engage in foreign shipments also.

Forest fires have been doing a great deal of damage in the province of Quebec. Laurentian lumber camps and mountain homes were recently deserted while thousands of men coming from all sections of the high land were fighting to prevent several forest fires from linking up and forming a conflagration, which would sweep every village and township north of St. Agathe. It is reported that a great deal of standing timber and large quantities of underbrush were recently burned in the vicinity of Gracefield. The wind dropped and enabled those combating the flames to gain some measures of control. The Gatineau Co., Limited, which was formerly the W. C. Edwards Co., own many of the timber limits that have been in the path of the flames. The amount of damage could not be estimated but the loss will be heavy.

### More Rigid Regulations are Called For

The annual repetition of forest fires, which broke out in the Western part of Ontario and the province of Quebec towards the latter part of May with such destructive results to life and property, call for a thorough investigation on the part of both the Ontario and Quebec provincial governments.

For the past two years the Crown Lands Departments of all provincial governments have been educating the public to use the utmost precaution against any cause that was likely to create fire in the woods, to be followed with dire destruction of forest property. The Quebec Department of Lands and Forests, through its forestry branch, have not only been cautioning the public, but have threatened to close the forests, the same as is done in France, to the hunting and fishing public, and passed a law to prohibit any and all persons, without a permit, from entering the woods from the first day of April this year which could only be granted by the Department and persons in authority to do so. Notwithstanding the propaganda of education and the threat made by the Department to close entrance to the woods without a permit, the forest fires still occur, and it is now up to the provincial governments to explain the cause.

It would appear from reliable information that the government guardians of Canada's forest resources are not altogether blameless. It is one thing to preach and another to practice, and in this regard it would be worth while to know why 50,000 permits were granted in 1922 to enter the woods and how many passes or permits were granted to enter the woods to lumber operators and fishermen this spring of 1923. If 50,000 permits are granted each summer season to enter the woods, 98 per cent. of those carrying such permits are

smokers and must build fires to cook the food they eat. A spark from a pipe or from a chimney or the stump of a lighted match, carelessly thrown to the ground, is suffice to start a forest fire likely to spread to large areas and cause destruction to millions of dollars of valuable timber property.

The day will come, if the provincial governments desire to preserve their forest lands from total destruction, when smoking must be prohibited in the woods and every fire made for cooking purposes must have a chimney with a wire screen to prevent the spreading of sparks or burning embers therefrom.

There must be no favoritism shown by the governments. The rich sportsman must be accorded no more consideration than the poor and humble citizen. When this policy is made law and enforced, and not until then, will the forest wealth of the country be free from the danger of fire and ultimately total destruction.

In the vicinity of Quebec fires broke out during the last week of May in the timber stands in the counties of Lotbiniere and Shawinigan which were fortunately well fought by the protective forces. The worst fires occurred in the Laurentian and Gatineau areas where millions of dollars' worth of timber were razed, especially in the Laurentian mountains running due north from Ottawa up the Gatineau region, with a computed loss into the millions. Reports of the outbreaks also came from Maniwaki, Que. where a forest fire loss of ten miles square was destroyed, and at Gracefield, Que., the village was threatened when two avenues of flames swept in from the east and western sides and twenty-five farmers lost all their timberlands. In Alcona, Que., farmers lost their hay crop as well as their timberlands, and at Buckingham, Que., bush fires were raging within three miles of the town on June 2nd.

Crossley & Trueman, Cowichan Lake, B.C., loggers, have dissolved.

The Montreal office of Terry, Nicholson, Cates, Limited, has been removed to 314 St. Nicholas Building.

S. J. Elsas, of the Anderson Co., wholesale lumbermen, New York, N.Y., spent a few days in Toronto recently.

Wm. Williamson, retail lumberman, 815 Woodbine Ave., Toronto, left lately on a trip to the Old Country.

A. C. Stark, late of the Elgie & Jarvis Lumber Co., Toronto, has joined the sales staff of the Central Canada Lumber Co., Toronto.

C. W. Wilkinson, of the Union Lumber Co., Toronto, has returned from a business trip to Great Britain and reports the lumber trade outlook as improving.

The new sawmill owned by Mathews, McNair & Graham Limited, near Rosedale, B.C., is nearly completed. The plant will have a capacity of 30,000 feet per day.

A charter has been taken out by the Atlantic Pulpwood, Limited, to deal in pulpwood and timberlands. The head office of the organization is at 50 Princess St., St. John, N.B.

Flames from an unknown origin destroyed half a million feet of lumber in the yards of Thurston-Flavelle Limited, Port Moody, B.C. The damage, which was estimated at over \$50,000, was covered by insurance. The main mill was saved.

A provincial charter has been granted to the B. F. Harris Co., Limited, with headquarters in Winnipeg, and a capital stock of \$50,000, to carry on in all its branches a lumber, timber and pulpwood business, and deal in logs and wood of all kinds.

Duncan McLaren, president of the Union Lumber Co., Toronto, and Mrs. McLaren, have returned home after an extended visit to Europe. They took in the Mediterranean trip and spent several weeks in Great Britain, France and other countries.

New France Lumber Co., Limited, Westfield, N.B., is a new firm recently organized to manufacture and deal in lumber, pulpwood and wood products. Capital \$99,000. Harry H. Schofield and George A. Hilyard, lumber merchants, both St. John, N.B., are two of the incorporators.

The many friends of B. F. Clarke, of Glencoe, secretary-treasurer of the Southwestern Ontario Lumber Dealers' Association, will sympathize with him in the death of his father which took place recently. The late Mr. Clarke was widely known and highly esteemed.

The warehouse and some other buildings belonging to the Spanish River Co. at its pulpwood camp at Mile 232, Algoma Central Railway, was recently destroyed by bush fires, but the loader was saved. W. R. Clarke, a tie contractor, lost his camp at Mile 235 but managed to save his equipment.

Langlois & Gouin, Limited, Victoriaville, P.Q., was recently organized to take over the business of Langlois & Gouin Reg., and to manufacture and deal in lumber, shingles, pulpwood and other wood products. Capital \$18,000. H. Langlois and A. Gouin, both of Victoriaville, are two of the incorporators.

With the object of carrying on a general lumbering business, the Eastern Timber Co. Ltd., Ottawa, has been granted incorporation papers. The capitalization of the new company is \$50,000, with the following as incorporate officers: Andrew G. McHugh, Albert E. F. Head, Patrick Anderson, Maurice Caron and Roger Methot.

The Shevlin-Clarke Co., of Fort Frances, Ont., suffered a loss of \$20,000 by fire recently. The blaze started about midnight in one of their gasoline launches and destroyed the launch, dock, warehouse and quite a lot of supplies, including a car of oak plank and a car of coal which was just received.

Raymond Fisher and J. H. Jenkins, new appointees of the British Columbia Forest Service, have been sent to the Fort George district to conduct an examination of the soil and timber for the purpose of determining what area should be preserved for agricultural purposes and what should be planted in timber.

John M. Mercer, vice-president of the Northern Construction Co. left Vancouver recently for Newfoundland to supervise the \$2,000,000 contract awarded that company for the construction of a canal in connection with the power plant for the new pulp mill to be established in that Dominion. The Armstrong Whitworth company

are the general contractors and J. W. Stewart & Co., Vancouver, have been awarded the canal and one other unit. The canal has been sublet to the Northern Construction company, A. R. Mann, the president, announced lately. The whole project is to cost about \$20,000,000.

The forest seaplane stationed at Tatrall, north of Franz, Ont., recently made a survey of the sections where there were forest fires. A. B. Connell, district forester, said that he expected a seaplane under Capt. Williams' direction would shortly make a flight to Moose Factory to determine what the fire conditions are in the country north of the Transcontinental Railway.

Fire broke out recently in the lumber piles of Mr. Yurling of Sunny Brae, N.S. It required the heroic efforts of firemen and citizens to subdue the flames which at one time threatened a large quantity of lumber belonging to the Nova Scotia Steel & Coal Co. and the village itself. The loss to Mr. Yurling, who lives in Cumberland County, will be rather heavy. About 250,000 feet of lumber was burned.

Ross Pendleton has been appointed manager for the British Columbia Timber Lands (Ltd.), a new organization which has taken over holdings of the Forest Mills (Ltd.), a British corporation heavily interested for some years in the interior of British Columbia. The new concern will move its head offices from Revelstoke to Nelson, and will operate the large mills at the latter place and at Cascade.

Charles H. Nadeau, of Port Daniel East, Que., states that they are getting out about 25 per cent. more lumber than they did last year and are now operating their mill to capacity. They expect to have a full season's run and will be forwarding lumber practically as fast as manufactured both by car and cargo shipments. The larger part of the cut goes to the American market. Mr. Nadeau says that on the whole they expect a very good season and find manufacturing conditions and lumber prices satisfactory providing no unforeseen labor troubles develop.

A new groundwood pulp mill, with a daily capacity of 100 tons, will be built this summer at Sillery, near the city of Quebec, by the Quebec Pulp & Paper Company, Limited, a new corporation organized through the efforts of John D. Roche of Montreal. The plans include provisions for expanding the plant to produce sulphite pulp and newsprint paper whenever it is desired to make the necessary additions. The mill will be exceptionally well located in regard to shipping facilities, having both rail and water connections and the company is also said to have made favorable arrangements for its supply of pulpwood.

In the House of Commons recently, Hon. Charles Stewart, Minister of the Interior, stated that representations had been received by the Government both for and against the prohibition of the export of pulpwood from privately-owned lands, and the question was under consideration. Hon. Arthur Meighen, leader of the Opposition, said that there was no excuse for continuing to permit the export of raw wood. It had been suggested that the United States might institute reprisals, but as long as Canada stood on her own feet, Mr. Meighen added that he feared no reprisals the United States might make.

A very marked improvement is reported from the country yards of line-yard companies in Manitoba. They do not report many large sales, but a great many small sales which are keeping up their volume. Secretary Ritter, of the Western Retail Lumbermen's Association, Winnipeg, reports that its building department has been real busy during recent weeks. Local wholesalers report considerable business from certain quarters and for certain lines of stock. Mixed car orders are still very hard to place for quick shipment, although straight car orders are being shipped out very promptly.

The James T. Gilchrist Lumber Co., 496 Gladstone Ave., Toronto, whose mill was burned some months ago, are rebuilding. The new structure will be two storeys high, 50 x 80, of steel and brick construction, and will be up-to-date in every respect. Much of the equipment in the former mill was saved from the fire and is being overhauled and put into excellent shape for the new factory. James T. Gilchrist, the proprietor, recently removed from 36 Lynd Ave., to his new home, 464 Gladstone Ave., a few doors south of his mill yard.

The Howard Smith Paper Mills, Montreal, have recently completed a bleached groundwood mill at Crabtree Mills, Que., which is working efficiently. The company also intends to extend its operations at Cornwall, Ont., and will shortly build a new finishing room 200 x 180 feet, and an addition to the machine room of 100 x 52 feet. This will increase the capacity of the plant by about 50 per cent. The company some time ago bought pulpwood limits in the Gaspé Peninsula, Que., and will bring pulpwood up the St. Lawrence to Cornwall in barges. For the purpose of unloading expeditiously a new wharf has been completed at Cornwall.

Mill and Timber Limits for sale. Timber large proportion Hardwood. Mill twenty thousand capacity. Large cattle and breeding ranch. Will sell with or without ranch. Located in Eastern Ontario. Address Box No. 50, Canada Lumberman, Toronto. 22T-1.

## TENDERS FOR PULPWOOD AND TIMBER LIMIT

Tenders will be received by the undersigned up to and including the 22nd day of June, 1923, for the right to cut pulpwood and timber on a certain area situated in the watershed of the Trout and Chapleau rivers in the district of Sudbury, comprising an area of 1,049 square miles.

Tenderers shall state the amount per cord on pulpwood that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for Spruce and 40 cents per cord for other pulpwoods, or such other rates as may from time to time be fixed by the lieutenant-governor-in-council, for the right to operate a pulp Kraft mill and a paper mill.

Tenderers shall also be required to say what they are prepared to pay, per thousand feet board measure, for the following classes of timber, over and above the upset prices in addition to crown dues:

Red and white pine, upset price, \$6.00 per M. ft. B.M.

Spruce (too large for pulpwood), \$5.00 per M. ft. B.M.

Jackpine (banksian), \$2.50 per M. ft. B.M.

The crown dues on pine including Jackpine being \$2.50 and on Spruce \$2.00 per M. ft. B.M. or such other rates as may from time to time be fixed by the lieutenant-governor-in-council.

The successful tenderer shall be required to erect a mill or mills within the limit or at some point in Ontario approved by the minister, and to manufacture the wood into Kraft pulp, and also such portion thereof into Kraft paper when required so to do.

Parties making tender will be required to deposit with their tender a marked check payable to the honorable the treasurer of the Province of Ontario, for fifty thousand dollars (\$50,000.00) which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said (\$50,000.00) shall remain on deposit until the Kraft pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of \$50,000.00 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelopes and marked plainly on outside "Tender for Trout-Chapleau Pulp and Timber Limit."

BENIAH BOWMAN,  
Minister of Lands and Forests.

Toronto, April 16th, 1923.  
N.B.—No unauthorized publication of this notice will be paid for. 9-12

### For Sale Cheap

Circular Sawmill, Building and Machinery; Steam Feed, suitable for Ties and Lumber.

also

Small two-storey Brick Factory, well-located, with or without woodworking machinery. Apply to John Harrison & Sons Co., Limited, Owen Sound. 24 T.f.

### D. FLORENCE & SONS

Bethune St., Peterborough, Ont.

Dealers in Scrap Iron, Metals, Second-Hand Machinery, Pipes, etc. 2-24

### Timber Lands for Sale

Timber and lands for sale on the North shore of Lake Huron, near White Fish River. For full particulars, etc., apply, The Toronto General Trusts Corporation, 253, Bay Street.

### Save Money

on lumber purchases by keeping posted on lumber market published every week in LUMBER, recognized authority of the industry, \$5.00 a year. Sample copy on request. LUMBER, 435 Columbia Bldg., St. Louis, Mo., U.S.A. 12-13

## An Excellent Opportunity For Contractor or Lumberman

We have large Limits on North Shore of Georgian Bay. Best quality Birch and other hardwoods, also Hemlock and Cedar. Would like to hear from party owning Tractor or Steam Log Hauler with a view of contracting to take timber out on shares or we would consider selling.

For further particulars—Apply to The North American Bent Chair Co. Limited, Owen Sound, Ontario, Canada. 11-12

The destruction of a forest is a direct loss to the public. A spark from a passing engine, or the dropping of a lighted match may cause the loss of timber worth millions of dollars. The public is thus deprived of lumber for building or construction purposes. It takes from seventy-five to a hundred years or more, for trees in a forest to grow to maturity.

### Canada's Forest Fire Plague

Four thousand forest fires left Canada millions of dollars poorer last year and, says the Canadian Forestry Association, unless every care is exercised by campers, fishermen, settlers and others, 1923 will show a loss equally as great. Nine-tenths of all forest fires in Canada occur

through human acts which are incidental to land clearing fishing and hunting. Very few fires are deliberately set.

## Canadian Wood Helps Uncle Sam

Only fifteen per cent of the timber-lands of Ontario and Quebec are privately owned. The remainder belongs to the provincial governments. The timber from private lands can be shipped out of the country unmanufactured and amounts to a million and a quarter cords of pulpwood annually, all of which goes to support United States mills. It is claimed that not two per cent of the farmers of Canada own any pulpwood or are interested financially in sending it to Uncle Sam's industries.

## Lightning Sets the Forest Ablaze

Interesting observations regarding the starting of forest fires by lightning were made during the past season by a Manitoba fire ranger in the service of the Dominion Forestry Branch. In an aeroplane flight made during a thunderstorm, he reports, at the height of two thousand feet, he could watch the lightning leave the clouds and strike the earth, and soon afterwards see the smoke rising from the fire thus caused. During the one flight five fires were observed to start in this way.

## MacLean Reports Cover Canada

MacLean Building Reports will give you accurate, advance information on every building and engineering contract of consequence in the Dominion.

These reports are issued daily and reach subscribers in ample time to bid on the work or submit prices for the machinery, equipment, materials or supplies required.

Subscriptions may be placed for any one city, portion of a Province or more than one Province. Rates range from \$85 yearly for the smallest cities to \$664.00 yearly for the entire Dominion.

Hundreds of firms are deriving much financial benefit from the use of MacLean Building Reports. Tell us what territory you cover and put it up to us to show how we can help you get more business.

Try this service out. The result will please you. Write today for rates and free sample reports.

## Resurface Your Roof

A coat of Reed's Roofing Cement—Plastic, Semi-Plastic or Liquid—will add years to the life of your roof.

This cement is the result of over Seventy Years practical Roofing experience. It will not peel nor blister and is absolutely unaffected by climatic changes.

Easy and inexpensive to apply. Ordinary labour can be used with satisfactory results.

Special prices by the barrel—Ask for them.

# Geo. W. Reed & Co. Ltd., Montreal

# The Three Goodhue Belts

**"EXTRA" "STANDARD" "ACME WATERPROOF"**

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions. When you buy a belt—buy a Goodhue. Prices and particulars on request.

# The Carriage You Are Looking For

## Our No. 1 Size

**CARRIAGE**—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

**SET WORKS**—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

**FEED WORKS**—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Linn Logging Tractor on operation of the International Land & Lumber Company, Limited, near St. Felicien, (District of Lake St. John, Que.)

# THE LINN LOGGING TRACTOR

In northwestern Quebec the snow came very late last winter. The above illustration shows the Linn Logging Tractor hauling logs on the operation of the International Land & Lumber Company Limited.

At the time the photograph was taken there was barely a foot of snow in the bush—yet, the Linn Logging Tractor was hauling its trains of logs to the dump—over poor roads—up bad grades and down steep hills.

The International Land & Lumber had completed their haul by the first of March. Their haul was about seven miles—and, even though their overhead charges included 100% depreciation on the Tractor in the first year, they report that, including all their costs from skidway to dump, (including the cost of hauling water for sprinkling over a distance of four miles from the nearest water hole to the point where it was used) their logs cost but \$3.50 per thousand feet at the dump.

This is the Sixth of a series of photographs taken in operations in Ontario and Quebec, where Linn Logging Tractors were in operation—The Seventh will appear in the July 1st issue of this magazine.

*“Ask the logger who uses one”*

(Continued on page 124)

## SAVE 400,000 TO 500,000 FT. OF LUMBER A YEAR

If you work timber tracts from two to ten million feet in size it will pay you many times over to investigate the CLARK FIVE FOOT BAND MILL. It will saw your lumber as cleanly and accurately as larger Band Mills and enables you to have from 10% to 15% more lumber to sell than if you sawed your logs on a circular mill with its 5/16" to 3/8" saw kerf.

It will mean a year's time from 400,000 to 500,000 feet of lumber which at \$25.00 per thousand amounts to almost \$15,000 a year with no increase in logging or sawing costs.

The slight increase in initial cost over the portable circular mill is greatly offset by the savings effected in a few months' time.

## "Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

# FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"  
"St. Marys," "Keystone" and "M.D. Elk"

# A RELIABLE AND FINE PERFORMING MOULDER

The exceedingly wonderful prestige of this moulder is evidenced best by investigating mills throughout the world and seeing the hundreds and hundreds of machines bearing the Yates 108 name-plate.

Surely there is something in Yates 108 which accounts for this remarkably high standing. To follow a 108 during construction is a revelation. Examine any big feature or any small detail. Even the coiled springs on the chipbreaker are special-made; they allow each section of the chipbreaker to yield, yet afford an even bearing across the bed plate upon stock of irregular thickness.

Comparison of Yates No. 108 with any other moulder will demonstrate its superiority. More than likely you will install the 108 when in the market for this kind of equipment.

## A Wise Investment---a "Long" Bandmill

THE following brief description will convey more to the experienced millman than any lengthy claims we might make.

Columns of full hollow box section, connected at the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible. Guide Blocks adjustable in all directions; quick opening, non-breakable pattern. Upper and lower bearings the same size and interchangeable; chain oiling, water cooled, adjustable in all directions. Protected steam cylinder to operate upper guide. Dake engine to handle upper wheel.

"The supremacy of this machine in the Bandmill field is due to its acknowledged leadership in design."
